CHINESE FRONTIERS OF INDIA.*

The North-East Frontier.

In the course of the twenty-two centuries which have elapsed since the descent of Alexander the Great and his Macedonian levies to the Jhelum valley and the plains of the Punjab, the constant passing of armies, and the ceaseless advances of conquering man have made a moving place in history for the mountains and the passes of India's north-west borderland.

Of the North-East Frontier little has been written, and for many years this boundary has remained hazy in its geographical limits, peaceful in its policies, and happy in the dulness of its annals. The events of the past few years, however, have forced this section of the frontier into a new prominence. With the flight of the Dalai Lama from Lhasa in February, 1910, we were brought to a sudden realization of the fact that China desired to inaugurate a forward policy in Tibet, and that India had acquired a Chinese neighbour along the whole stretch of that 3000 miles of frontier from Kashmir, past Nepal, Sikkim, Bhutan, Assam, and Upper Burma, till we reach the Mekong and Tongking. Not that China is playing a new part in asserting her power in Central Asia or that Chinese ambitions and Chinese policies are an unknown factor on the Indian borderland. We see, however, these ambitions and policies recalled to life after a long sleep, and carried through with a new vitality. The Chinese colossus has moved in its extremities, its farthest limbs, when the heart seemed to be failing and the centre of all its activities in Peking was over-burdened with troubles from within and from without, and seemed for the moment numbed and almost broken.

No. III.—March, 1912.]
Since the conquest of Kashgaria by the Emperor Chienlung in 1759, the sway of China has been recognized as far as the Kashmir border with but a little break in the days of Yakub Beg and his Mohammedan rebellion. She has bounded our Indian Empire, too, along the whole of the Burma frontier for several centuries, though it is but in the last few years that she has attempted to carry her administrative frontier up to her political border line. She has exercised a shadowy and intangible suzerainty in Tibet since the eighteenth century, and now she has at last asserted claims which are more than those of a suzerain in that mysterious and distant dependency. She has carried her arms to the sacred city of Lhasa, has driven the Buddha incarnate with but little ceremony from his spiritual throne, and has even asserted claims over Nepal, Bhutan and Sikkim which have attracted the attention of the world.

China has excited but little general interest in western Europe until recent years. We have known of those industrious millions leading laborious lives in their ricefields, packing their tea and their bales of silk in the great yellow plains of the Pacific coast, or importing the cottons of Manchester and sending them in heavy-sailed junks far into the Chinese hinterland from which the Yangtse flows. China, however, has been little more than a name, a market, an unaggressive people slowly rising from the apathy of centuries of sleep. It is impossible to live amongst these industrious law-abiding people without learning for them a liking and respect, as one watches their humorous acceptance of the endless round of monotonous days, days of little sorrow and little joy, a dull and uneventful sojourn to the inevitable end. We have had to fight in China in the past for fair trade and for such relations as may exist with dignity between the nations of the earth, but we have been little worried by Chinese beliefs in their world-wide Empire or in the claim that there can be but one “Son of Heaven” on an earthly throne. We are told that China is the Middle Kingdom, a happy isle rising above the floods of circumambient barbarism; and we are not particularly agitated when reading that, so late as 1793, the Ambassador of His Majesty King George III. was conveyed to Peking in a barge, which bore aloft the legend that His Excellency came bearing tribute from the English King. Such incidents have been accepted as quaint but immaterial side-lights on a country whose soldiers wore targets embroidered on their breasts, but whose merchants were honest purveyors of good teas and regular purchasers of unlimited cotton goods from Manchester. We will trust that they may long remain so, and that the commercial genius of Great Britain and China may serve to link the two nations with a tie that shall be strong enough to withstand the frictions of political controversy, of impulsive boycotts and international strife.

It is inevitable, however, that we should feel for China a new and stronger interest since she has forced upon us the recognition of her neighbourly claims. There are few countries which should prove so satisfactory in this relationship as China, with her peace-loving, slow-moving people,
CHINESE FRONTIERS OF INDIA.

and her administrative genius. India will be happy indeed on her north-east frontier if China proves true to her tradition, and if she will consent to learn and to fulfil the duties which civilization demands from the nations whose borders march with those of sister powers. Signs are not wanting that this will be a hard lesson for her to learn; she has grown so accustomed to a tribal fringe, to the barbarian hordes to the north and south and west of her broad domains, that she is slow to realize the rapidity with which her modern advance is bringing her to new and undreamed of frontier conditions. Opposite Kashgaria and Chinese Turkestan lies India; administrative advances in Yun-nan bring her to the Indian line in Burma too; her military activity in Tibet brings her again to Assam and to India, and lastly we cannot but regard with interest the political significance of the move, which has installed her as a military power behind the mountains of Bhutan, Sikkim, and Nepal.

I have been asked whether the past few years have shown signs of any real change in Chinese affairs. My own experience prompts me to answer, yes; the changes are very apparent, but their actual value cannot yet be safely gauged. There was a very general and very obvious stir throughout the country after the occupation of Peking by the allied forces, at the time of the Boxer troubles. That, I think, was the first real stimulant to the awakening of China, the first realization of her needs and her possibilities. Before that crisis there was much talk of the break-up of China, but China would not easily break up now; even in the midst of the present eruption we cannot but recognize that her position has been consolidated in some intangible way, and that the eighteen provinces have been brought to some realization of their common interest. The next decisive influence was the outcome of the Russo-Japanese war, which awoke a new ambition throughout the East, whilst losses of Chinese territory have brought to a head the lack of confidence which had gradually been gathering among the people for the past three years.

Whatever may be the visible outcome of the present revolution there is little doubt that the will of the people will triumph, and that China will embark on a new career of progress and national unity, which should be as welcome to the civilized world as to the most enthusiastic members of an awakened China. In dealing with the frontier question we cannot but consider this new factor on our borders. Both geographically and politically China comes closer as a neighbour, and awakes an ever-increasing interest in her weakness or her strength. She has the nucleus of a fine army, and she has an abundance of good fighting material in her sturdy millions, if we may judge from those few occasions when Chinese troops have been led by British officers. If the Government is able to keep the new troops free from the peculation which has sapped the energy and effectiveness of the old military system, they may one day be capable of great things. They have the tradition of that Chinese army which, little more than a century ago, performed the military feat of
overrunning Tibet, and trying conclusions with no less redoubtable a foe than the Gurkhas of Nepal.

It is impossible to see far ahead or to weigh with accuracy the outcome of the next few years. China is now passing through her most difficult and most critical phase. She will probably be too much absorbed in her internal affairs, too much concerned with her social and political reformation, to venture into any external complications. At the same time she will find herself in the difficult position of a country which, although potentially rich, is actually poor; which is hampered by long-recognized corruption among the official classes; and which is nevertheless obliged to support a growing army, and all the expense and strain of reshaping her political and economic machinery.

And so the new progress of China cannot fail to interest, and interest deeply, those countries which are her closest neighbours. During the next few years we shall watch the spread of a national spirit, springing to life with the extension of railways, posts, and general communications. We shall see, too, the far-reaching effects of this new-born experiment in constitutional Government, which should break down provincial prejudices and weld the scattered dominions of the Middle Kingdom into a homogeneous whole. China is so vast, so strong in her own individuality, yet so inscrutable to the western mind, that one hesitates to indulge in generalities as to her present or her future. The more that I see of China, however, especially from the provinces of the interior, the stronger grows the conviction that her greatest strength lies in the intense vitality of her people. Old as they are in history, their spirit is still young and virile. Corrupt as is their official life, they are yet the most honest of peoples. Loving their homes and their families with a love that amounts to a religion, they have yet this genius of spreading across the world, founding prosperous and respected colonies wherever they go, and giving proof of a sterling worth and a persistency of purpose that is worthy of the youngest of nations.

Our oldest frontier relations with the Chinese lie along the Burma-Yun-nan border, and it may help to the realization of our Chinese neighbours, of their border country and their new interest to our Indian Empire, if we consider for a little that wild borderland which marches with Burma for 800 miles, where Yun-nan forms the western boundary of China from the Mekong northwards to Tibet. It is difficult to imagine a country which is still within the boundaries of the Middle Kingdom, yet bearing less resemblance to the long yellow plains of the loess-covered northern provinces, or the densely populated rice-lands of the Pacific coast, than this wild mountain tract among the Central Asian plateaux.

Starting our journey by way of Rangoon and Bhamo, it is but a three days’ march to the frontier, and five more on to Teng-yüeh, the first of the Chinese cities. The road is passable only for pack-animals, and one settles down to long daily stages at the head of a caravan of mules, swinging
steadily along over the mountain roads to the rhythm of a pair of sweet-toned gongs, which ding-dong through the silence of the forest. They are pleasant marches, those first few stages through the dense green jungle, the road now overshadowed by great trees, now sweeping up to reveal broad prospects of mountain peaks that fade into the distant haze, now winding along the banks of rocky, orchid-bordered torrents.

Hidden in the mountains on both sides of the frontier-road, are villages of Kachins, a wild and warlike race which causes much anxiety to the Chinese and to the peaceful Shans inhabiting the neighbouring valleys. The men are keen-looking fellows, who spend their days in sharpening their dhās, or long two-handed swords, their nights in drinking and in harrying the marches. The burdens of life are literally borne by their women folk, long trains of whom are met along the roads, carrying on their backs great baskets of grain depending from a strap across their foreheads, whilst their hands are busy spinning strands of cotton yarn, or weaving a straw bracelet for their sweethearts, as they toil up the mountain slopes. They wear a short kilt, supported by numbers of loose rattan girdles, the lobes of their ears are pierced and distended to carry long tubes of silver or rolls of red cloth, and their faces are coarsened by hard times. They are hospitable people, these Kachins, offering a welcome to any passing traveller without question or hope of reward. This spirit of hospitality, indeed, is carried to a point which might almost be considered extravagant. I remember a case at a recent frontier meeting in which a trans-frontier Kachin appeared as the complainant. He had accepted an invitation to dinner, dined not wisely, but too well, and fallen down a precipice on his way home. The result was a broken leg, and, in consequence, he now appeared in Court to sue his host for damages. The erring host paid up quite cheerfully, and the international incident was thus amicably settled over the body of a sacrificial pig. These Kachins showed a fierce resistance to the first British columns which entered the country, but they have not been slow to learn the pride of race, and the clean and prosperous administration, which follows British rule. The work of the handful of officers who have been entrusted with the pacification of these hill tracts for the past fifteen or sixteen years, has indeed borne abundant fruit, for the Kachin is a very human fellow, a lazy, superstitious, brave and devoted highlander, and he has been well won.

There is a physical reality about the frontier, which impresses one very clearly as the caravan emerges from the last shady miles of the Burma road and looks down from a commanding peak over the two great Empires, stretching far away to the East and the West. On the one side lies Burma, green and forest-clad as far as the eye can reach, the hills raising their wooded summits from a sea of white and billowing mists, whilst on the other side China stretches away to the sunrise, with hills that are bare of trees, rugged and weather-worn, with every crevice standing clear in the still sparkling air of the winter morning.
And then, as the day advances, we wander down into the northernmost of the Shan States that form the western boundary of China along much of this frontier line, and take our course by the waters of the Taping, that “River of Peace” which is so well named in its quiet sojourn through the country of the Shans.

The Chinese Shan States run in a series of well-watered valleys between the frontier and the great Yunnanese plateau, with roads winding along broad, grassy stretches, above which magnificent banyan trees spread their giant arms and their deep shade. In an avenue of these trees at the little village of Manwyne, Augustus Raymond Margary, the first Consul to visit Têng-yüeh, was murdered thirty-five years ago, winning by his brave march and his fearless death a freedom for all time to foreign travel and foreign commerce in the distant regions of western China. But a few miles farther on, and under just such another clump of trees, George Litton, a noble successor to Margary, was found dead in his sedan chair in 1906. He had spent six years as our Consul in Yun-nan, and all his British enthusiasm and his keen, scholarly mind, had been devoted to the lifting of the veil which then covered so much of far western China. His journeys into Yunnanese Tibet and into the unknown valley of the Upper Salween, added a rich store to our geographical knowledge of the border provinces, and the name of Litton is immortalized among the tribesmen and the Chinese merchants of Yun-nan, who found in this British Consul an unexpected tower of strength in the good cause of fair trade and political freedom.

From the semi-tropical Shan valleys it is but a day’s journey to an entirely new world, a long, steep climb through beds of lava and volcanic peaks to the great Yun-nan plateau, at the edge of which, at an altitude of 5400 feet, stand the battlements and towers of Têng-yüeh, the western outpost of Chinese administration. Here there is a Commissioner of the Imperial Chinese Customs Service; for Têng-yüeh—in spite of the fact that it is a journey of eight days from the nearest navigable water—is an “Open Port” under Treaty, and all merchandise on the trans-frontier road is free of likin and local tolls, and subject only to a regular Customs due. There is also a member of the China Inland Mission, that wonderful organization which has penetrated into every corner of the Chinese Empire, and which finds a never-failing supply of enthusiastic men and women to lay aside the calls of their native land and devote themselves whole-heartedly to the work in the interior of China. They are to be found in the most miserable cities and in the most obscure corners of the country, working quietly and unostentatiously always, but with unflagging courage. There seems to me little doubt that the cheery homes and self-sacrificing lives of our missionaries have been a very real object-lesson to the people among whom their lot is cast, and they have rendered very solid service to China by their efforts to direct her new educational adventures into clean and honest lines.
Têng-yüeh is the headquarters of a Taotai, who is responsible for peace and good order over the broad regions of the Western Marches, and his position is strengthened by a garrison both of the old Green Banner troops of China, and also of those new troops who have been drilled and armed in accordance with the most modern ideas of Europe or Japan. The Chinese officials live in Yamens within the city walls, and their lives are vastly dull—a veritable banishment from the lines of ordinary official life, with none of the music and theatricals, or the dainty and extraordinary dishes which are the heart's delight of Chinese epicures. For the white man, however, the Yun-nan country is full of attraction. The highland air is crisp and cold throughout the year, even during the rainy days of summer. One can gallop over the downs, shoot pheasants, partridges and quail on the bracken-covered hills, bringing down an occasional Lady Amherst or a silver pheasant to crown the bag. Woodcock, snipe, and wild-fowl lure one through the woods and marshes in the evening light, and the clear mountain torrents yield up the Barbus tor.

In spite of its far-away position, Têng-yüeh is the great market of Western Yun-nan, the distributing centre for foreign goods, the collecting centre for all the native produce coming down from Ta-li Fu. It is busy with Burma Caravans, its market thronged with tribesmen, and its streets gay with passing officials and their picturesque retinues, for it is in Têng-yüeh that the political and commercial life of the Yun-nan frontier finds its focus and its centre.

Frontier Tribes.—Let us consider for a little while the Chinese marches, the physical characteristics of the country around our north-east frontier; and the strange and little-known tribes which have been driven to the refuge of these border mountains, or have chosen the intervening valleys in the southerly march of humanity, since the Tibetan highlands and the Central Asian plains have grown less hospitable to man. Taking Sadiya as our first centre, we find to the north-west the Brahmaputra basin of Assam, with its line of tribes shut in among the rugged mountain country which is watered by the Bohroli, the Dihang, the Zayul, and the Lohit, and cut off from the probable line of Chinese progress from Rima towards Lhasa by the easterly arms of the Himalayan system. Of these tribes the Abors, the most northerly of all, have forced themselves most recently upon our attention by the murder of Noel Williamson and Dr. Gregorson, officers who had travelled widely in the tribal country and had met with a friendly reception on all sides. The Abors and Akas have long been known as warlike and independent peoples, with their own tribal organization and a plentiful supply of dhas and bows and arrows, but they have admitted our claims of suzerainty for many years, and their homes lie on the Indian side of Asia's greatest mountain boundary. The Daphlas, the Miris, the Mishmis, the Singphos or Kachins, and the Nagas all live within this Brahmaputra basin of Assam, and, though little touched by the direct administrative agencies of the Indian Government, they have been visited
from time to time by British officers and have acknowledged their Indian allegiance, whilst the difficult nature of their country and the lack of natural communications cut them off from the Chinese sphere in Tibet.

Leaving the Assam basin and moving further east, we find a different belt of country, where the easterly trend of the Himalayan system gives way to a series of parallel ranges cutting across it at right angles, and running in a regular grid-iron formation directly north and south. In the angle formed by these two mountain systems we find the actual geographical limits of India’s north-east frontier.

High in the uplands of Central Asia rise three great rivers, the Salween, the Mekong, and the Yangtse, and, near the south-east corner of Tibet they run side by side within a belt of 50 miles, fed by few tributaries and divided by the great mountain masses which here and for many miles to the south have made the geography and history of the little-known and deeply interesting region marked out by nature as the Burma-China frontier.

In about lat. 28°, where the most easterly branch of the Himalayan system sweeps down towards the basins of the three rivers, we find that mysterious corner of the world where Tibet, India, and China meet. The line of snow-capped Himalayan peaks runs from the west towards the Salween, leaving Assam and Upper Burma to the south and Tibet to the north of the range. Then comes the right angle, while the unbroken limestone ridges of the Irrawady-Salween watershed divide the Chinese province of Yun-nan from the British outposts of Upper Burma. It is at this point, too, that China merges into Tibet, a line of semi-independent States with their hereditary princes and kings holding the balance between the rival powers of Lhasa and Peking, but gradually inclining to the Chinese dominion as the military and administrative forces of the Empire are pressed steadily westward.

The most northerly corner of Yun-nan, generally known as Yunnanese-Tibet, is actually a portion of the Tibetan province of Kham, long famous for its fighting men, and the race which inhabits the country is called Ku-tsung—men of Tibetan type and language, who have nevertheless abandoned to some extent their nomadic lives and now occupy themselves mainly with agriculture and cattle rearing. In the high plateaux of this district, lying at an altitude of some 11,000 feet, the Ku-tsung pass their lives in some prosperity, raising good crops and sturdy ponies and cattle that command a ready market both in Burma and Yun-nan. They are frank, cheery people, keen sportsmen and hunters, and they own a devout allegiance to those great Lamaseries, which, until the recent Chinese advance, have held the whole spiritual and most of the temporal power in the Tibetan borderlands.

For the moment that power is broken, and China has stepped in with beautifully worded edicts declaring the fostering love of the Emperor for his border peoples, whilst the presence of the Imperial forces gives a very
solid backing to these expressions of benevolent intent. Many of the lamaseries now lie in ruins, their monks fled, their treasures scattered, and the tribesmen are exhorted to a new way of life, admonitions being even devoted to the advantages of wearing breeches by those who have omitted that simple expedient in the past. In the meanwhile Chinese settlers are being lured into the broad plateaux with promises of strong and handsome wives, of broad acres and countless yaks, thus repeating once more the process which has constantly carried the customs, the language, and the blood of the Chinese a little deeper into the country of the frontier tribes.

Whilst the purely Tibetan peoples still make their home in the most fertile and prosperous corner of the country, the basins of the three great rivers have each sheltered kindred though widely divergent tribes, and their inhospitable country and mountain fastnesses have enabled them to withstand the westerly progress of Chinese administration. Among these tribes the Lolos probably hold the strongest place, and though their scattered communities which have wandered south into Yun-nan tend to become absorbed in the Chinese cosmos, they still retain an unquestioned independence in the country of the upper Yangtse. Little is known of their history, and their own traditions speak of an ancestral nidus in the south-east corner of Tibet, where Burma and China meet. They are unusually tall and handsome, with well-marked noses and pointed chins, a higher type than is usual among the frontier tribes. It has been suggested to me by one who is an authority that they bear marked resemblances to the North American Indian, but though I can bear testimony to a striking physical likeness between the two types, I have had no opportunity of taking anthropometric measurements in Lolo-land, and can throw no light upon a question which might serve to link the plateaux of Central Asia with the plains of North America in the great book of the world's history.

The Lolos shave their heads, leaving one lock, which is bound into a turban and then twisted into a long horn projecting over their forehead, a very striking head-gear. The women are graceful in their carriage, independent and shy, but not unfriendly to foreigners; and I have travelled with a Lolo girl for guide, an experience which seemed strange after living among the pent-up women of China. Both men and women are often seen with a rough coat of untanned skins thrown over their shoulders, but the national dress is a long felt cloak, the women wearing a skirt beneath it, and ornaments of silver and shells. I remember once seeing an old chief in a long shapeless garment which was woven from asbestos strands. He was evidently pleased that his costume should meet with envious admiration, but he stoutly resisted all allurements of exchange, even though a much-coveted pair of corduroy breeches were thrown into the balance for him. I am inclined to think that the advantages of asbestos suitings have been somewhat overlooked in these days of expensive laundries.
It requires no washing, and is thoroughly cleaned by the simple process of throwing it into the fire.

Unlike the Kachins and Lisus, the Lolos have a written language. They have also a more definite idea in their religious aspirations, and have risen a step beyond the simple animism or nat-worship of the surrounding tribes in their conceptions of immortality and the life beyond the grave. They look to the starry heavens as the shadow of the life to come, and see in its shining constellations the souls of those happy comrades who have already passed beyond the veil.

Whilst thinking of the legends in which these young and half savage frontier tribes seek to explain the mysteries of nature and the secrets of the supernatural world, one is reminded of the old flood story, which, with little variation, finds a place in the folklore of them all. It is based always on the escape from the waters of a brother and a sister, who became the father and mother of the world, and recalls to us Ovid’s “O soror, o conjunx, o femina sola superstes,” though the Deucalion and Pyrrha of the frontier lands were not wedded until after the flood days were past. In the Lolo story the brother and sister were carried over the face of the waters in a wooden casket, and the first sign of the receding flood was a spray of bamboo, which sprang from a rocky crevice as the first sign of hope, and became for them the emblem of regeneration for all time. The Kachin couple were saved in a drum, the Lisus in a gourd, whilst in each case they bore sons, to whom are traced the families and tribes and nations which people the earth to-day.

Of all the tribes the Lolos have given the most trouble to the Chinese officials and people on their marches, for, not confining themselves to a steady opposition to administration or absorption, they make regular raids on their peaceful neighbours for their supplies of salt, and they seldom return without booty and cattle and prisoners; nor is it often that these men can be redeemed from slavery. A line of Chinese garrisons now encircles the independent Lolo country, but they do not penetrate or interfere, and are mainly occupied with hemming in the tribesmen within their own borders. In one city they have arranged a system of Lolo hostages, who are changed year by year, but whose lives would pay the forfeit in the event of aggression on the part of their unruly kinsmen.

There is another tribe, the Lisus, who are as wild and independent as the Lolos, but who are so shut in by their encircling mountains that the Chinese have made little effort to interfere in their affairs, and have left them unmolested in the inhospitable defiles of the upper Salween. Though of a lower type and lower in the scale of civilization than the Lolos, these Lisu peoples have a great interest for us, holding as they do an undisputed sway along the stretch of our north-eastern frontier between lats. 26° 30', and 27° 30', with the mountains of the Salween-Mekong divide shutting them off from Chinese power, and the ridges of the Salween-Irrawaddy watershed making a formidable barrier between them and the
Maru and Kachin tribes, who inhabit the Nmai Kha and Mali Hka valleys of Upper Burma among the upper waters of the Irrawady basin.*

To the south of the Tibetans, the Lolos, and the Lisus a chain of rice-growing valleys stretches down as far as the Mekong and the French frontiers of Tonking. The wild Was, the Lahu or Lohei, the Palaungs, and the Akkas are all found in the mountains which fringe them, but the valley population is almost entirely Shan. They are to be found in every stage of political evolution, from those of Chen-kang near the Kunlong Ferry, which has been entirely absorbed by the Chinese, to the Sip Song Panna or Twelve Shan States in the extreme south of the province. Until about a year ago these little states enjoyed an absolute and very riotous independence, but they have suddenly been occupied by Chinese troops, and taught a severe lesson. In spite of the tropical heat and the fever-stricken valleys, the Chinese troops have remained throughout the summer, and there seems little doubt that the Yun-nan authorities are earnest in their resolve to carry their administration up to the very border-line where they are bounded by foreign frontiers.

It will be realized, then, that along the whole of our North-East Frontier we march with country over which a suzerainty is claimed by China. The Chinese are separated from us only by a fringe of aboriginal races, sometimes with a history of actual independence as in the case of Tibet, sometimes with little more than the tradition of it as amongst the Shans, or again with the independence only of inhospitable mountain homes such as those of the Kachins, the Lolos, the Was, and the Lisu. The Chinese policy in dealing with these tribesmen is one of peaceful absorption, and they spread their influence a little year by year, first robing the chiefs in Chinese official dress with its accompanying hat and peacock feather, bestowing on them an hereditary title and a Chinese seal, then insisting on a slight knowledge of the Chinese tongue. Their influence is light, intangible, and unostentatious, but none the less real, and an erring Sawbwa or chief soon realizes the weight of displeasure which his superintending officer can wield. When disorders or disobedience go beyond the recognized limit soldiers appear and annexation takes place, a fate which has already befallen two of the Shan States, and which may be anticipated for others in the near future. From the north to the south of Yunnan the Chinese have shown a definite progress during the past two years, both in the Shan States and in the tribal country. An Imperial Commissioner of viceregal rank has been appointed "Warden of the Marches" for Yun-nan and Se-chuan; civil and military officers are being posted throughout the States, a census is being taken, a basis of taxation laid down, schools are being established, and the Chinese language enforced. They

have tried, too, the difficult experiment of introducing the cold-blooded and stereotyped marriage customs of China amongst these highland peoples, who, though far from immodest, are attracted by hot-blooded adventure as much in their loves as in their wars. It is clear indeed that the Chinese are determined to extend their administrative area, until they are met by the outposts of their neighbours along the whole of their Central Asian border-line.

Frontier Camps and Frontier Journeys.

For those who are able to follow the main trade routes of the empire it is possible to travel throughout the length and breadth of China without even carrying a tent, and needing but little baggage save a camp bed and such stores as may be necessary to relieve the monotony of local chickens and rice. Every stage has an inn, a dirty, fly-infested place, with a table and two chairs, bitterly cold in the winter, and as unbearably hot in the summer months. In the thinly populated lands of Yun-nan, however, there are few inns and few supplies, and it is only during the last year that rest-houses have been erected even on the main highway from Bhamo up to Têng-yüeh. Frontier journeys are therefore a slow progress, with a long caravan of mules and a camp at night by the waters of some clear mountain stream.

We have followed the tribes and the line of country from north to south on the Chinese side of the Burma-China frontier, and I would ask you to come with me now across to the British side. Within that mountain angle at the extreme north-east corner of our Indian Empire lies a tract of country which both Great Britain and China have been content to leave almost unknown in the past, but to which attention has recently been attracted in consequence of the steady advance of Chinese colonists into the basin of the Irrawady. The Hpimaw expedition, a small column from the Burma post at Myitkyina, has visited the territory during the past few months for purposes of exploration and administration, and they found themselves in extraordinarily difficult country. They tell of marches from dawn till dark when only 2 to 3 miles were covered, and on one occasion it took eleven days to cover 23 miles. In spite of the natural difficulties, however, the expedition did some excellent work, and a road has been pushed northward for 140 miles from Myitkyina, thus carrying our administrative belt right up to the Chinese frontier.

About a year ago I made a hurried march into this country as far as Hpimaw, or Pien-ma as the Chinese call it, and it may interest you to trace for a few minutes the course of my journey in the border country.

From Têng-yüeh the road runs north along one of the little parallel valleys that lead to the dividing range between the river systems of the Chinese Salween and the Burma Irrawady. We are soon beyond the belt of cultivation and bare, treeless hills into the land of the Lisu cross-bowmen, where the masses of limestone cliff rise from the pines and evergreens
THE FRONTIER MOUNTAINS, IRRAWADY-SALWEEN DIVIDE.

LISUS OF UPPER SALWEEN.
of forest-clad slopes, the foaming torrent of the Mingkuang stream winds a white course through the bracken, the calls of pheasant, sambar, and barking deer break the silence of the morning, and rhododendrons, briar roses, and pyrus japonica gleam out with a wonderful brilliancy of colour from the grey mists that herald the coming rains. Even the Chinese escort, and the phlegmatic muleteers are moved to wonder at the beauty of the land. They are good fellows, these Chinese soldiers of the Green Banner troops or old army, always cheery and uncomplaining even on the hardest days, dressed in serviceable blue nankeen with turbans and straw sandals, and able to do long and continuous marches of from 25 to 30 miles a day over those rough mountain tracks. They manage to live, too, on the resources of the country, and scarcely ever need any transport or commissariat beyond the one blanket which a generous Government provides. The Chinese have borrowed from us the fashion of recruiting a percentage of tribesmen for the regiments stationed on the border, and on this journey I had one Kachin lad, on whom descended the dignity of carrying my gun in addition to his dha and his embroidered bag, with its bamboo tube of liquor.

I asked him one day how much spirit was considered a proper daily allowance among the Lashi tribe, to which he had the honour to belong. "That," he replied, "is regulated entirely by the amount which we are able to obtain." "Tell me," I said, "what is the song you sing?" "That," he answered, "varies with the occasion. I sing now that the dawn is greying in the sky, and we must take the road; from the mountains comes the cry of the deer, seeking their mates in the spring; the flowers are beckoning to the bees, all the world is glad, and only I lament, for in my tube there is no wine to cheer my heart."

The fifth day's march brought us to the end of the valley at Ta-chu-pa, where a scattered population of eighty Lisu families eke out a scanty subsistence, and five strongly stockaded Chinese houses form the headquarters of a thriving trade in coffin planks that come from the forests beyond the range. Here we were at the foot of one of those wild passes that would lead us from Yun-nan into the unadministered territory of Burma, and we halted for a day to make some preparation for the crossing of the range. The account of the road given by the tribesmen was not very encouraging, and there was no alternative but to jettison the escort and the mule-caravan, and to send them round to meet us when we emerged again into open country. I managed, however, to enlist a few young Lisus as porters, and they undertook to carry enough kit for ten days for myself and my personal servants. There was little enthusiasm for the journey, and it was difficult to decide who felt the more aggrieved, the escort, who were "being deserted" and left to face the terrors of the road alone, or the men who were to accompany me into the "inner land," relying on the protection of a shot-gun and varied samples of the British and foreign pharmacopoeia. For future travellers on the North-East
Frontier, I can recommend a medicine chest as an unfailing passport to the affections of the tribesmen. There is a steady demand for remedies, and, even if physical relief does not always follow the direct line indicated in the book of the words, the application of draughts and pills and lotions ensures a mental gratification which is nobly independent of results. I remember one old chieftainess who was totally blind, but who felt that she ought to be cured. Needless to say, my efforts were all in vain, but her heart was completely captured by a liberal application of scented hazeline to her eyes and nose and face! The cotton-wool with which the applications were made grew noticeably blacker, and at the end of the treatment her complexion and general appearance presented such a marked improvement that every feminine member of the encampment developed an affection of the eyes; nor was there any rest until my stock of hazeline had been exhausted.

And so we commenced the ascent of the watershed range, the track lying through miles of tangled bamboo brake and dense forest jungle, through which an advance-guard of Lisus and Lashis hewed a way with their dhals, whilst the ponies struggled and slipped on the steep mountain paths, scrambling over the trunks of great fallen trees, and wading through the rocky torrents. This track is regularly used for a few months of the year by the tribesmen who come carrying coffin planks down to Mingkuang and the Chinese markets; but their path was scarcely discernible in the jungle, and the heavy rains which had fallen for several weeks had made of the low-lying portions a hopeless morass. After a long climb we reached the pass of Fen-shui Ling, the "Dividing of the Waters," and it was very reassuring to learn how thoroughly the tribesmen had mastered the principles of physical geography. Pointing to two little streams which trickled in opposite directions down the mountain-sides, they explained that the water-parting formed the border-line between Great Britain and China. They gave me, indeed, such an insight into the practical meaning of a "divide" as might have proved a liberal education to those distinguished officers of a friendly Government, who once gravely stated that a disputed frontier watershed would be found upon investigation to lie at the foot, and not along the top of the neighbouring mountain range. And then, with a courtesy that went to the heart of the situation, the Lisus from the Chinese side handed me over to the Lashis as their guest, and we continued our journey down into the valley of the Ngawchang Kha. On arrival at the next camp the weather broke, and for five days and nights the rain poured down in ceaseless torrents. The little single-fly tents could not resist the storm, clothes and bedding were sodden, the weight of the porters' loads was terribly increased, and the poor fellows spent the night squeezed within the narrow limits of the tents as far as was physically possible, or out in the open with no protection from the wet ground or the beating rain and snow save a layer of palm fibre. After seeing the hard lives that these tribesmen lead, and the triumph of the elements in their
mountain homes, one wonders little at the animism forming the basis of all their faith, or at the fact that the rain and thunder, the lightning, the wind, the forest, and the mountains are all held by demons of malice, whose wrath can only be appeased by offerings and sacrifice. On one day we were obliged to march from dawn to dark without a halt for rest or food, as we found no clearing in the jungle, and the country was reported by the natives to be full of poisonous herbs, which the ponies would eat if we halted, with fatal results. It was with some relief, then, that we at last saw a cluster of homesteads on a distant hillside, and knew that Pien-ma was near, and the worst of the journey past.

We were now in that broad stretch of territory to the extreme north of Burma and beyond the Myitkyina outposts, which until the last year has been practically unadministered by Great Britain, as large neighbouring tracts on the other side of the range, including the whole of the Black Lisu country in the valley of the Salween, remain unadministered by China. It is the old story, however, of the white man's burden, and these outlying peoples are gradually being brought under control by the extension of that orderly government and honest administration which has already found a practical justification in the health and prosperity and general well-being which it has brought to the tribes farther south.

Before leaving this country, it may be interesting to seek for some general idea of this extreme north-east corner of our Indian frontier, as it has been revealed by those few travellers who have penetrated into the unadministered territory. They include Errol Gray, in 1892, Woodthorpe and Macgregor, in 1895, Pottinger in 1897, and Noel Williamson in 1907, all of whom entered the country from the Indian side. Prince Henry of Orleans in 1895, and Young in 1905, made remarkable journeys in the opposite direction through from China into Assam. Mr. H. F. Hertz, C.I.E., and Mr. W. A. Hertz, C.S.I., now Deputy Commissioner at Myitkyina, have also penetrated far into the territory; but their attention has been devoted to the administrative problems and the future of the people, and their work is too broad to be touched upon in this light geographical summary.

The country is drained in its eastern corner by the headwaters of the Irrawady, which, at the confluence above Myitkyina, splits into two streams, the Nmai Hka and the Mali Hka. On the west the Chindwin—another tributary of the Irrawady—flows down from the Naga hills of Assam and through the Hukong valley, eventually joining the parent stream not far from Mandalay. Then on the north, the Lohit and Dihing branches of the Brahmaputra run from the isolated Shan State of Hkamti Long westward to Assam and Sadiya. On the eastern boundary of this country lies one of the world's great ranges, the Irrawady-Salween watershed, which divides the territory from the Chinese province of Yun-nan. On the north rises a range which shuts it off from Tibet, and which appears to be one of the most easterly arms of the Himalayan system.

The fact remains that this distant and partially administered corner
of the old Burmese kingdom is closed from China to the north and east by a great mountain wall, which compares not unfavourably with the barriers of India's North-West Frontier. Its rivers are a part of the Indian system. Its people belong to the tribes of Assam and Burma already under direct British administration, and ethnologically distinct from the Tibetan and Lisu tribes who inhabit the Chinese slopes of the surrounding mountain systems.

The northern belt of the territory, stretching away from the Mishmi or Taroan country of Assam, is a huge stretch of uninhabited jungle, subject to a heavy rainfall, and marked only by the ruins of ancient villages, showing the existence of some old-time trade-route between Assam and the Shan State of Hkamti Long, which still flourishes around the sources of the Mali Hka river under a number of princes or chiefs, who hold the title of Sawbwa common to all the Shan States.

For centuries past the Sawbwas have been subject to Burma, holding their rank and titles from the Court at Mandalay and retaining to this day their ancient insignia of office. Some twenty years ago, when Upper Burma was definitely enrolled as part of the British Empire, they applied for, and received, a renewal of their appointments from the nearest centre of British administration, and communications have constantly been maintained between Hkamti and the district headquarters at Myitkyina. Forming as it does a political, historical, and commercial link between the administrative areas of Upper Burma and Assam, and guarding as it does the sources of the Irrawady, it would be impossible to allow any interference with the Burma traditions of this Hkamti State, or to permit any Chinese aggression from the side of Yunnan or Tibet. The gradual improvement of the roads and communications in the country north of Myitkyina will now give opportunities for a fuller development of the fertile Hkamti valleys. There can be little doubt indeed that the inclusion within the administrative area of these temperate highlands, their tea hills, and their open grazing country will prove of very material value as a hinterland to the tropical river valleys of lower Burma.

Away east of Hkamti and between it and China is the rugged country known as the Kiu valley, which was traversed by Prince Henry of Orleans in 1895. It is inhabited by Kiu-Tzu or Khunnongs, who are in a low state of civilization and who add to their scanty resources by acting as labourers and porters for their wealthier neighbours of Hkamti. There seems to be evidence, too, of a wilder, fiercer race known as Chenungs, with homes in the corner between the upper Nmai Hka and the Salween.

Descending the Mali Hka river we find the early home of the Kachins and the path by which they found their way south. A number of them, known as Khakus, still dwell on the river banks and pass their lives in considerable comfort and prosperity. Unlike the turbulent streams to the east, the Mali Hka runs placidly over its sandy bed, bordered by a rich tropical vegetation similar to that of Assam, out of which rise numerous
villages with a flourishing agriculture and united by good roads. The Kachins inhabiting the Hukong valley to the west of the Mali Hka are also wealthier and more prosperous than their highland cousins in the south. They have driven out the early Shan inhabitants, as their kinsmen now threaten to do in their more southerly settlements, and they have settled here to a regular lowland life, producing quantities of rubber and amber, which find an exit through the markets of Myitkyina.

The Nmai Hka valley to the east belongs to the wilder section of the frontier lands, and formed the route by which the Marus descended in their march towards a land of promise, when emigrating from their northern homes. In the upper reaches of the river they still remain the dominant race, and Pottinger has described them as the “Black Marus” on account of their dark complexions, an attribute which may be traced in all probability to their disregard of personal cleanliness. The independent Lisus are also classed as “Black” by their neighbours, and they probably deserve the name both by virtue of their appearance and their deeds. A lad who had been in captivity among them for some months told me after his escape that “they have no lamps or candles, and at night the men sit round the fires, smearing their faces with lard and ashes, drinking deeply of their rice spirit, and for ever plotting robbery and murder.” In the lower reaches of the Nmai Hka and in the valleys of its affluent the Ngaw-chang Hka, the inhabitants call themselves Lashis, though they are undoubtedly related not only to the Marus of the upper river, but also to the Szi tribes, who are found farther south along the Burma-China border. They are wild-looking fellows in their long, unbleached hempen robes and gaiters, and they are never seen without their dhas and spears. The women have generally adopted blue Chinese cloth for their clothes, with short skirts and turbans, and coils of cowries and beads round their waists and necks, their ears being pierced in three places for large brass or silver hoops. The Lashis attend no market, and depend on Chinese pedlars for their clothes. They are indomitable traders, these Chinese, reaching into the fairest corners of all that tract of country, bringing in their cotton stuffs and their ornaments, opium, beads, buttons, needles, and oxen, and carrying out in exchange gold, musk, bears’ galls, a drug called huang-lien, bees’-wax and coffin planks. The imports nowadays are entirely of Chinese origin, but the roads now being pushed out into the country should succeed in carrying British cotton goods all through this district. It is sufficiently populous and prosperous to absorb a considerable quantity of such goods, for the natives can produce no local garments beyond the rough hemp of their village looms.

For some days I was hemmed into this remote corner of Upper Burma by violent storms. The wind howled over the bare hills, the ground became a regular quagmire, and the passes were all blocked by snow. Towards the end of April, however, I managed to get away, and struck eastwards over a pass, which crosses the Salween-Irrawady divide and enters China No. III.—March, 1912.]
near the little hamlet of Teng-keng on the Salween, the capital of one of those hereditary Tussu or chiefs, who are charged by the Chinese with the care of the Lisu country, but who dare not show their face anywhere near the villages of the independent tribesmen. The top of the pass (10,500 feet) was covered in whirling mist-wreaths, and at intervals could be seen miles of snow-clad peaks stretching far away in a long unbroken line, as the great mass of the Irrawady-Salween watershed vanished into the white clouds towards the north. All round the pass were masses of primulas, great blooms of a brilliant azure blue, and to the east the valley of the Kutan Ho ran steeply down in sunshine to Teng-keng and the Salween river, backed by the great mountain range dividing it from the Mekong, which is almost as perfect and symmetrical as are the peaks on its western bank.

The weather fortunately cleared for my march back to Têng-yüeh along the Salween. The river valley was in its full glory of early summer, and, although intensely hot, was a pleasant change after the hard journey in the mountains. These upper reaches of the Salween are the home of the Lisu tribesmen, who have up to the present successfully resisted every attempt at administrative advances on the part of the Chinese. As far as lat. 26° 15' they are comparatively quiet, passing lean and hungry lives in their mountain villages and attracting little attention. Beyond that point, however, and as far north as about lat. 27° 40', where the river opens out and the Lisus are replaced by the milder Lutzu tribe, they hold undisputed possession of jungle-covered gorges, recognizing no form of law or government, and maintaining a seclusion which has only been broken by the late Mr. Litton and his companion, Mr. Forrest, in 1905. Further explorations of the Salween have been discouraged by the murder of Dr. Brunhuber and Mr. Schmitz in 1909. Looking up that rocky gorge, one could well imagine the scenes so vividly described by Litton, the filthy villages where every man's hand is against his neighbour; the poverty, the hunger, the cross-bows, and the poisoned arrows, the single-rope bridges across the torrent, and the diet of wild honey that proved at last so nauseating to the weary travellers.

The Kashmir-Kashgar Frontier.

In the extreme North of India and far removed from the jungles of Burma and Assam there stretches another section of our Chinese frontier, where Kashmir marches with Turkestan, or the New Dominion, and the district generally known as Kashgaria. Here, among the untrodden snows of the Himalayas and the Hindu Kush, runs the boundary line which divides India from the Pamirs and the Central Asian deserts, and here lies the point where Great Britain and Russia and China, the three forces of the Asiatic continent, find their common meeting-place.

The military road which runs from the Wular lake in Kashmir to Gilgit, through thirteen stages of wild and beautiful scenery, is well
known and has been frequently traversed and described. It is continued for four marches beyond Gilgit, and leads as far as the little states of Hunza and Nagar, the centre of a tribal organization no less interesting than that of the north-east frontier, though entirely different in character. The Kanjutis of Hunza and Nagar made a desperate struggle for independence when we advanced into their country twenty years ago, but their career of lawlessness and bloodshed became at last unbearable.

It became evident that there would be no peace in northern Kashmir till we had dominated the whole country as far as the Hindu Kush, and carried the Pax Britannica right up to Nature's frontier. The whole history of Central Asia indeed is an object-lesson in that strange fate which presses nations forward, often against their will, and imposes upon them ever-increasing burdens. Civilization has no place for the lawless tribal fringe, and it must sooner or later be broken or dominated, a task which has occupied the energies and moulded the policies not only of England, but of Russia also and China. They have met now in a common goal with the best and surest of frontiers, the watershed that sweeps across a continent and has bounded the ambitions of man from the beginnings of time. It is difficult to realize what it all means until one wanders through Central Asia, alone and unarmed, in places where within the memory of living men, defenceless travellers had learned to expect a cruel and certain death. One realizes then that though old conditions may have fostered a bolder spirit in many a gallant tribesman, yet for the world at large the change has been all gain. England and Russia and China have worked hand in hand in this towards the greatest good of all, and now at last that old trade route which led from Rome across to China is once more open to peaceful caravans, once more protected by great imperial powers, and free at last from its long eclipse under the hands of nomad hordes and lawless mountain princes.

But even when we have reached the fastnesses of Hunza and Nagar, we are still seven days from the actual frontier, and the most difficult and dangerous marches of all this journey lie ahead. During these last marches to the frontier ridge all but the slightest kit must be abandoned. It is a slow and anxious progress along the cliffside, scaling precipitous rock-faces with but a few inches of foothold, crossing logs which are balanced in the crevices, so frail and so inconsequent that an unsteady stone, a slipping plank, or a false step would throw one hundreds of feet to the rocks of the river-bed below. The way lies, too, across a glacier, which, with its ice-peaks separated by deep cracks and chasms, made the most formidable obstacle of all under the heat of the August sun. Such is the road which leads from India to Chinese Turkestan and the Russian outposts in Central Asia, a road which divides our Indian Empire from its northern neighbours rather than links it with them. And so one comes to the great watershed, the meeting of the Himalayas and the Hindu Kush, and the Kilik and Mintaka passes lead across to Chinese Turkestan.
There is another road from Kashmir into Chinese territory—a longer but less difficult one—from Leh northward across the Karakorum. It is the loftiest trade-route in the world, the pass itself being over 18,000 feet; but caravans labour across it year by year, sacrificing vast numbers of transport animals to the strain of the high altitude, the storms, the cold, and those 200 miles of desolation that mark the Karakorum plateau, "The Desert of Black Gravel."

But to return to the Kilik pass, the climb leading up to the roof of the world at a point where, in the words of Sir Thomas Holdich, "a rugged and inaccessible spur of the Sarikol range carries the boundary into regions of perpetual ice and snow to its junction with the main range. Here, amidst a solitary wilderness, 20,000 feet above sea-level, absolutely inaccessible to man, and within the ken of no living creature except the Pamir eagles, the three empires actually meet." From the frontier as far as Tashkurgan, stretches the Tagdumbash Pamir, a part of Sarikol, and its people are believed to be of Aryan origin. In the broken mountain country north of Tashkurgan one finds the Kirghiz, nomads too, but of a more Mongolian type, with little hair upon their faces and long narrow eyes. These races of Central Asia, however, are greatly mixed in blood, and one may find in the same tent a black bushy beard alongside a smooth-faced lad with flaxen hair and well-opened grey eyes. Kirghiz, or Sarikoli, or Turkoman, however, all bear the distinctive marks of the nomad above all difference of locality or race or creed. The guest is received into the tents of the Kirghiz Mohammedans, welcomed as warmly at their fireside, and waited on as freely by their unveiled women as among the Buddhist Mongols of Northern Asia. They are a picturesque crowd as they sit round the argol fire waiting for their evening meal; the nomads in robes of every brilliant hue, orange, and purple, and crimson, and green; my Kanjutis from over the border in their white cloaks and caps, with bunches of yellow poppies or mauve primulas above their curls. All round us are the flocks and herds, shaggy black yaks and two-humped camels, the men and children rounding up the cattle, the women milking or cooking or weaving, and the sun throwing its last gleams over the brown tents and the broad russet pastures in their setting of eternal snows. One is carried back to the days of Father Abraham and Father Isaac, to those far-off centuries when these central Asian plateaux swarmed with countless wanderers, who were driven out at last by the resistless forces of drought and famine, and went forth to conquer the known world, to overwhelm the nations with the Tartar wave of the Dark Ages, and to leave their mark upon their peoples from Russia to Japan.

China's hold upon her nomad population is of the lightest and, although a handful of men is maintained on the Pamirs at Tashkurgan, there is little sign of Chinese authority until one drops into the great plain of Central Asia, and finds at Kashgar a Chinese Taotai, a garrison, and a walled city
on the regular Chinese model, set in that green ribbon where the line of irrigation brings wealth and prosperity and the most luscious of fruits to a dense Mohammedan population, on the very borders of the deserts of Takla Makan. Here we find the Chinese in their furthest outpost, their westernmost extremity, a position which they have lost and won time after time throughout the ages. Here they are installed as rulers of an alien race, surrounded by Mohammedans, a five months' journey from Peking, yet utterly unaffected by their strange surroundings and unusual conditions. They do not even attempt to learn the language of the people, and remain entirely dependent upon their Turki and Persian interpreters. They have even a separate city for themselves, a Chinese Kashgar lying several miles from the Mohammedan town, both of them provided with fine walls and guard towers and moats.

From Kashgar lines of cultivation and traffic stretch eastward to China proper on either side of the great desert, the northern ones leading past Urumchi into Mongolia and Kansuh, that to the south passing by the ancient civilizations of Kotan and the Lob basin. Changes of climate have deflected the line of the road since classic days, and even since the time of Marco Polo, but the great trade route is still open, the long lines of camels still swing through the dusk on their night marches through the desert, bearing their distant cargoes from Peking or Samarkand, from the oil wells of Baku and the Moscow cotton factories. Here in Kashgar one realizes what the central Asian markets meant to the ancient world and what they mean to-day. Here are still the nomads of the high plateaux, the thronging Turkomans of the fertile oases, the old means of transport, the richly laden caravans, the mud-walled caravanserais, the very heart of Asia. And here at last one turns one's face westward, following that old path of conquest and progress and commerce across the desert and over the Alai snows, through Samarkand and Bokhara, over the waters of the Oxus, through country still rich in memories of Alexander and Genghiz Khan and Tamerlane, and then at last to Geok Tepe marking the last wave of conquest, Russia's final and decisive victory, till one reaches the Caspian, the Caucasus and Constantinople, and the long, slow marches of Asia give place at last to Europe.

The Chinese as Frontiersmen.

Throughout all those earliest centuries of the Christian era, when China was struggling to consolidate an empire around the Yellow river and Yangtse basins, her statesmen and her soldiers never ceased to dream Imperial dreams and to carry the fame of the dragon throne ever further toward the west. So early as B.C. 110 the Han dynasty had pushed Chinese influence as far as Kashgar, where a flourishing market sprang up for the exchange of commodities between China and the Roman Empire of the East. They had even built the Great Wall westward from Peking, which protected the whole of their northern frontier and kept open that road
into the Tarim basin, of which we have lately heard such interesting detail from the researches of Dr. Aurel Stein. The two thousand years which have passed, and which have seen such fluctuations in the decline and fall of China’s glory, have left that old wall standing in the desert, its line still clearly marked, many of its watch-towers still standing, the manuscripts of the soldiers who guarded it preserved in the still dry soil, and the very foot-marks of its sentinels still outlined on the desert sand.

But Chinese influence in Central Asia was destined to no uninterrupted or peaceful career. In the eighth century the power of Islam swept over the land with its fierce struggles and hot religious passions, leaving to this day a Mohammadan faith throughout the country as far east as the Chinese province of Kansuh. For some two hundred years the Tang dynasty (618 to 908 A.D.) again brought to China a period of life and prosperity, one of the best eras indeed in her whole chequered history, and the more noticeable from the fact that it coincided with those dreary days of the Middle Ages, when Europe was passing through its darkest phase. The Tangs spread out their influence once more over the vast stretches of Central Asia, carrying their arms and their policies in a temporary triumph as far as the city of Kashgar. From that period there was a regular swing in the pendulum of Asiatic power, the influence of China rising and waning as the power on the throne proved vigorous or feeble. In the thirteenth century Genghiz Khan and his son the great Kublai not only conquered China, but brought to the Imperial throne a Mongol dominion stretching westward to Bokhara and Samarcand. Tamerlane followed him in 1333 A.D. with a series of Asiatic conquests, of which the fame rang through the western world, and left him with a reputation second only to that of Alexander the Great. With their usual foresight in such matters the Chinese laid claim to this young Turki conqueror and invested him with a fabulous Mongol descent. And so they continued the tradition of their Central Asian sway for many years after they had ceased to hold any power beyond the limits of the Middle Kingdom, at a time, indeed, when they were busy strengthening their barriers and shutting out the barbarian tribes which menaced their seclusion.

It was left to Chien Lung, the great Emperor of the Manchu dynasty, to consolidate the real hold of China over her outlying western dominions. In 1759 he definitely annexed Turkestan; invested many of the tribal chiefs along the Yun-nan and Se-chuan borders with Chinese seals and office; asserted a claim over Tibet, and appointed an Amban at Lhasa, after assisting the Tibetans against the inroads of their Gurkha neighbours. He even entered into relations with the neighbouring States of Bhutan and Nepal. His ambitions led him at last to attempt the conquest of Burma, but his armies were defeated, and neither he nor any other Chinese emperor has ever succeeded in extending their influence over that fertile land. Since Chien Lung’s reign the power of China on these frontiers has been twice shattered by Mohammedan rebellions, that of Yakub Beg in
Turkestan lasting for fifteen years (from 1863 until 1877), whilst some forty years ago a similar rising generally known as the "Panthay Rebellion" devastated the province of Yun-nan during the eighteen years from 1855 to 1873. The suppression of these Mohammedan movements, however, left China more vigorous than before, and she spared no pains to consolidate her forces, and to bring her outlying dominions under direct and definite administration. In 1878 the whole of Turkestan was enrolled as a regular Chinese province, governed by Chinese officials from the capital of Urumtsi (Ti-Hua Fu), and her civil power is backed by a force of 8000 men, some of whom are drilled and armed on the lines of modern European armies.

It is, then, to the days of Chien Lung that China's modern land frontier can generally be traced. During the hundred years which elapsed after the death of this emperor there was little activity in these regions. The energies of her Government were being devoted then to the suppression of internal risings, and to the new questions which were arising on her seaboard in consequence of the breaking down of her old seclusive barriers and the opening of her shores to a world-wide trade. During the last decade, however, those landward frontier problems have again been forced to the front, and we have not been allowed to forget the presence of our Chinese neighbour on India's north-east frontier. The history of our relations with China in Tibet, and of the causes which led to the expedition to Lhasa of 1904, have been fully told in Sir Francis Younghusband's latest book, and there will be no need for me to dwell upon this section of the North-East Frontier.

Along the whole western border of Se-chuan and Yun-nan runs a line of tribal country, to parts of which reference has already been made, and which now constitutes one of China's most difficult frontier problems. Starting from the north of Se-chuan and running well down into Yun-nan, we find the plateaux of the Tibetan nomads. The most northerly of them constitute the Chia-rung States, lying to the west of Sung-pan and Kuan-hsien in Se-chuan; then come the fighting Horba States, Chantui and Chagla, west of Ta-chien-lu; then Derge, Chamdo, and Draya, to the west of Batang, and Litang and Mili farther south, the three last being part of the province of Kham.

For some years the Chinese authorities of Se-chuan and Yun-nan have been working towards the subjugation of these little principalities, and recent events have forced their hands and compelled decisive action. Early in 1904 the Assistant Amban Feng, who had been appointed to Tibet, was murdered on his way when near Batang, and the whole of the Lama country was soon up in arms. The disturbances spread over a broad stretch of country, and even as far south as Tze-ku on the Mekong, where the Lamas burned the French Mission and murdered Father Dubernard, one of those brave French pioneers who had devoted the whole of his long life and high intellectual gifts to the service of the frontier
tribes, having left France when Napoleon III. was at the height of his power, and never returned. George Forrest, a young Englishman, nearly fell a victim to the fanatic followers of the Lamas at the same time, and he was hunted for a month over the Mekong-Salween divide, eventually escaping through Wei-hsi, where he arrived almost dead from starvation and exposure. The serious nature of this Lama rebellion, and the murder of so high an official as the Amban Feng, finally stirred the Chinese into action. Chao Erh-feng, a man of good repute for energy and honest service, was entrusted with the task, and in 1906 he set out for Ta-chien-lu, commencing the great work on the Tibetan border which is still being carried on. In 1908 the Chinese showed their appreciation of the importance of his work by bestowing on him a rank and title equal to that of the Resident at Lhasa, at the same time giving him the fullest powers for the entire subjugation of the Marches. The native rulers of Batang, Litang, and Hsiangcheng have all been deposed, and their offices abolished, the State of Derge has been absorbed, Chinese officials and troops are stationed at every important centre, and, whilst the power of the Lamas is practically broken, a regular system of Chinese administration is being introduced, with schools, roads, and telegraphs. In the meanwhile, the increasing prestige of the Government has brought a new confidence to the people and the traders, who are now freed from the old lamaist oppressions, the ula or supply of transport animals for officials by the people, the forced service, and all the evils attendant on a powerful and unprincipled priesthood.

From Batang the Amban Chao has constructed a military road as far as Derge, and thence he pressed on with his modern-drilled troops to Chamdo, the great market of eastern Tibet, and the most important place between Ta-chien-lu and Lhasa. The past three years, indeed, have shown a tireless energy on these Marches. The powers of the independent states have been broken one after the other. Chinese officials have replaced the kings, who have generally been pensioned off with a small military title. The influence of the Lamas is dead, their greatest Lamaseries destroyed, and, for the first time in history, Chinese power is effectually established on this road, which forms the great highway between Lhasa and the thoroughly administered province of Se-chuan. The importance of the subjugation of these states cannot be overlooked. They formed the great barrier between China and Lhasa, both from a strategic and political point of view, and the effectual absorption of Tibet would have been impossible as long as the road was blocked by these tribesmen, who belong to an obstinate fighting race, and among whom the Lamas could be trusted to maintain a steady opposition to Chinese interference. No sooner was the way clear to Lhasa than another road was pushed south to Yun-nan and A-tun-tze, thence west to Chamutong and Rima, where the latest of China’s military posts has recently been established within two or three days’ march from our territory in Assam. And so we are brought face to
face with the realities of the Chinese advance to the very limits of their political boundaries in this little-known corner of the Chinese-Indian borderland.

**The Future of the Frontier.**

Such then are the long land frontiers which divide the territories of China from our Indian Empire, and before closing my paper I will endeavour in a few words to sum up the present position on the frontier. On all sides are broad problems of exploration, the unknown reaches of the Brahmaputra, and the white patch on the map through which the Upper Salween flows. There are unclimbed mountain peaks with eternal snows within but a few miles of semi-tropical valleys, great rivers and broad deserts, grassy treeless plateaux and evergreen forests. And then there is the fringe of tribesmen from the Hunza Nagars to the Abors, the Tibetans to the Shans, sounding every note in the gamut of human development. Some can boast proud and ancient civilizations, some still remain in a state of primitive barbarism, yet all are merging into the two Empires to whom Fate has entrusted their welfare, and in whose hands lie their future government and administration; for there can be no stopping of the clock; the process of absorption is as inevitable and as unresting as the sun in its course. Perhaps it is this relentless force of Nature which has brought the question of the frontier so forcibly to our notice in the course of the past few years. China is awakening to her responsibilities as much as to her rights; she is founding an army, a representative government, a modern learning and a new press, and sometimes the times seem out of joint, the internal situation will not balance itself, the external situation becomes top-heavy, and then clouds gather on the frontier horizons. She has shown a wonderful skill in the peaceful absorption of some races, Marus and Lisus, Kachins and Shans having all been gathered at times without too much trouble into the family of the sons of Han. Now she is engaged with a new problem, with the absorption of the Tibetan peoples, and it may be that this will prove a more difficult task, for in the past there has been a tendency for Nature to assert herself in the opposite direction, and for the stronger personality of the Tibetan to engulf the emigrant Chinese. Perhaps this will prove an insuperable difficulty to China’s new ambitions in Tibet. If so, it is difficult to know what will happen, for it is hardly possible that she can maintain a heavy expenditure for her military and administrative machinery on the Tibetan border for an indefinite time, and we have yet to learn if the bold spirit of the Tibetans will consent to a purely Chinese rule not backed by overwhelming forces. Be that as it may, the border problem remains the same. India and China must meet along some thousands of miles of frontier, and meet as neighbours, willing to work hand in hand towards the solution of those difficult border problems which beset them both, the administration of the tribes, the substitution
of justice, and law, and order, of well-protected trade and agricultural prosperity, for the feuds and individualism and poverty that have marked the tribal belt in the past.

India has held out the hand of friendship on all sides, has tried to carry into her Chinese relations that broad reasonableness without which nothing can be accomplished. The Chinese should prove the best of neighbours for us, and there is, I think, every reason to welcome their administrative advance, so long as it continues in a spirit of neighbourliness and good accord, laying aside small prejudices and striving for the greater good of all the frontier peoples. These Chinese have an undoubted liking for us, be they tribesmen or the real sons of Han, for they know that they may expect from the English fair treatment and just dealings, and in travelling through many provinces of China I have never once been met by a discourteous word or an unfriendly action from the people.

As there is no dream of aggression from the direction of India, so I believe that there need be no danger to us in the recent Chinese advance, no yellow peril on the Indian borderland. Events, however, are moving apace, and we are reminded of Lord Curzon's warning that "Frontiers are the razor's edge on which hang suspended the modern issues of peace or war, of life or death to nations." It may be hoped that China will realize the value of British friendship in her future ambitions as in her past sorrows, and that she will be willing to meet us in a fair and reasonable spirit on the far-reaching Indian frontiers of Yun-nan and Tibet.

The President (before the paper): The reader of the paper to-night, Mr. Archibald Rose, is going to lecture to us about the frontiers of China and Great Britain in Asia. Mr. Archibald Rose has spent the last twelve years in the Consular Service of Great Britain and China. He was in the siege of the Peking Legations, from which he emerged, I am glad to say, unscathed. He subsequently travelled in Mongolia, and then marched across China from Peking to Szechuan in 1902. He spent two years there, in the course of which he travelled over a great deal of Western China, and came in touch with the frontier problems of China and her relations with her far-Western dependencies. For the last three years Mr. Rose has been stationed as Consul at Tengyueh, on the Burma-China frontier, at a time when the expansion of China in a westerly direction has brought her administrative border to the natural but largely undelimited line which is actually the northeastern frontier of India. He has had many opportunities of moving about, and of establishing friendly relations with the tribesmen who are wedged into the corner where Tibet and China meet. He has just returned home to this country, having travelled by way of India and Central Asia. Finally, I may add that he received a C.I.E. among the recent honours that were bestowed at the Durbar.

The President (after the paper): I might feel tempted to follow our lecturer this evening in his description of the interesting countries which he has visited, as illustrated by the admirable slides that he threw upon the screen, and which recall incidents that are indelibly fixed in my own memory. But I prefer to say a few words to you on the vastly more important subject which has been raised by his paper, and which he has treated not only with knowledge, but with discretion.
The most remarkable politico-geographical fact of the modern world is the degree to which, in Asia, and much more in Africa, frontiers are growing together, and parts of the world which have hitherto been remote and regarded as unapproachable, are falling under the influence of this or that great Power. “No man’s lands” are rapidly disappearing. Independence is giving way to protectorates and spheres of influence. Boundaries which a few years ago were fluctuating, or traditional, or in some cases non-existent, are becoming fixed, regular, and defined. Probably within the lifetime of most of us within this room there will scarcely be a portion of the globe over which the flag of some substantial Power will not fly. Hitherto this process has been in the main due to the advance of great European Powers. In Asia, they have been Great Britain, Russia, and France. But the lecturer this evening has taken us, so to speak, into another world, and has exhibited to us for the first time, at any rate during the past century, China as a growing, a pushing, an advancing, even an aggressive Power. Now although, as he pointed out to us, there may have been evidences of such an inclination on the part of China at times in her past history, broadly speaking this is a new phenomenon that he has described. It is one which it is desirable that we in this country who are interested in our Eastern possessions should regard with a watchful, although certainly not with a jealous eye. Mr. Rose, in his paper as he has read it, and still more in the form in which it will be published, has taken us round the Indian frontier and shown us the different points at which we are already or presently will be in actual touch with China. On the west there is the common frontier of the Pamirs. Then there is the frontier beyond the Karakoram. Proceeding eastwards, we come to the points where Chinese territory abuts very closely upon the states of Nepal, Sikkim, and Bhutan. This brings us in contact with the Tibetan problem. Further east we come to the Chinese frontiers on the borders of Assam, and finally to the frontier of Burma and China in Yunnan. A few years ago over the whole of this stretch of territory there was a belt of petty states or wild tribesmen between these two great Powers. In the majority of places it still exists, but it is becoming contracted, and we have to face the fact that in a very short time it will in all probability disappear.

The two most conspicuous scenes of China’s advance are in the first place Tibet, and secondly the Yunnan frontier. This is not the occasion on which it would be proper for me to make a speech about Tibet. But I greatly regret that China has been encouraged by our action or inaction to resume and tighten, I may even say to re-create, what was only a nominal suzerainty over Tibet; and I think it an unfortunate thing that when, owing to the success of Sir Francis Younghusband, the Tibetans had been left with so friendly a disposition towards ourselves, they should have been allowed once again to fall into a position of subjection, if not of servitude, to another Power. I pass on from that to the boundaries of Burma.

This is no new question, for during the whole time I was in India one of the minor problems that occupied my attention was the frontier question of China on the borders of Burma. Attempts at delimitation were proceeding throughout that period. There were, however, difficulties, because we had to deal with Chinese officials who were left to act much as they pleased—and who were usually aggressive and sometimes impossible. Again, troublesome incidents used to occur in the course of contact with the wild tribes, and I remember that two of our own officers were murdered. The Government of India always set before themselves that which I am sure they are pursuing at the present moment, namely, the desirability of fixing a boundary which should be identical with the physical watershed.

There is a third point on this frontier of which I will only say this, that I hope
that at no time will there be any misunderstanding about the fact that Nepal, Sikkim, and Bhutan are states which fall within the political frontier of India, and that in no circumstances whatsoever would any other Power be allowed to tamper with them.

In the concluding parts of his paper Mr. Rose spoke of the future that lies before us in those regions, and he employed terms with which I find myself in entire concurrence. I venture to lay down as a general proposition to guide us that it will be wise for our Government, wherever we can, to fix definite frontiers with China, and, as a necessary corollary, not to allow those frontiers when determined to be encroached upon or impaired. It does not necessarily follow, if you fix a frontier, that you need carry your administrative functions right up to it. It follows no more in the extreme north-east than in the extreme north-west, where, as you know, our administration in some cases stops far short of the boundary which is the line of political influence. Although I have often heard British and Indian Governments accused of aggressive designs, I have never yet myself met a Government which was anxious to extend its rule over turbulent mountain tribes, and I should say that all that we want in fixing a frontier is that it should be recognized and kept by the Power that is upon the other side, and that the tribes which lie upon our side, while recognizing our political influence, should refrain from intriguing across the border or from harrying those who are within our political boundary. Those are the general conditions that we endeavour to create upon the frontier, and I hope that a steady policy of delimitation will be pursued by those responsible during the years that lie before us.

I agree with the lecturer in saying there is no reason why there should be any quarrel between ourselves and the Chinese over these matters. The general temper of that people is affable. Their respect for the English is greater than that of any other foreign power. The surest way, however, to avoid a quarrel is to show decision and firmness in the early stages; to fix your frontier and make it quite clear that you will not allow it to be infringed.

Finally, Mr. Rose spoke in language of enthusiasm and also of some pathos about that band of young officers of whom he is one, and who have done and are doing such magnificent work on the borders of the Indian Empire. My spirit also thrills within me whenever I think of those men, and certainly I have never been more proud in my life than when in any capacity I have felt that I was leading or inspiring them to good work. Mr. Rose mentioned among them Mr. George Litton—a great loss to the Indian Empire—a man of fine character and eminent public service. I would go as far as to say that if I were asked at the present moment where is the finest work being done by Englishmen, I would not point to the British House of Commons, nor even to the cricket-field at Adelaide (although pretty good work is being done there), but I would look to the frontiers of the Indian Empire, and to the work that is being accomplished by Mr. Rose and people like him.

The last point that occurs to me is this—Can there be a greater mistake than to suppose that the work of exploration is over? Is it not quite clear, when you follow Mr. Rose's journeys, and still more when you study the map, that there are in those parts of Asia alone hundreds of thousands of square miles of interesting and unknown territory still waiting to be visited and explored? It is my conviction that there is enough work for travellers and explorers for the next hundred years to come. I believe myself that successive Presidents of the Geographical Society will, for the next fifty years at any rate, have the pleasure of handing our Medals to geographers whose services will be at least as great, if not perhaps as showy, as those who have received them in the past. And when these fifty years of
geographical exploration have come to an end, I think it will take the geographers of those days at least another hundred years to digest all that this country will have swallowed in the preceding century.

I will now ask Sir Francis Younghusband to say a few words, and before he rises may I take the opportunity of congratulating him on what I hope is a complete recovery from a very dangerous accident and a very serious operation.

Sir Francis Younghusband: Mr. Rose, in the extremely interesting and valuable paper only a portion of which he has been able to read to us this evening, dwelt upon the great and impressive personality and vitality of the Chinese, and the whole of his paper was a practical illustration of the effects of the personality and vitality of this remarkable people. Wherever you see a Chinaman, you are always deeply impressed by the strength of his individuality. If you meet him on the far borders of his empire, in Turkestan, Mongolia, or Tibet, he is always precisely the same as he is at the heart of his empire, and with that strength of personality he impresses to a very remarkable extent those tribesmen and frontier people with whom he is brought in contact. The vitality of the race is equally remarkable. When I used to look at those thousands of Chinamen amongst whom I travelled, I was always noting to myself that there appeared to be a regular sea of latent possibilities in them. For years and years they remain perfectly calm, and not a ripple appears on the surface; yet you feel all the time that underneath this calm there are immense vital forces ready to break into operation at a moment’s notice, and I think at the present time we are in the face of one of these convulsions which occasionally break forth from the Chinese millions. At these times they throw up some great personality, and in the case of Tibet in the few recent years we have seen that very remarkable man, Chao-erh-feng (who, I believe, has recently unfortunately been murdered), who certainly showed a very conspicuous ability, force of character, and energy, first in reasserting whatever Chinese influence there used to be over those semi-independent tribes between China and Tibet, and eventually in asserting a regular Chinese domination over Tibet itself.

Well, when there is on one side of this magnificent natural barrier of the Himalayas 400 millions of Chinese with all these latent possibilities in them, we on the other side who have in our charge 300 millions of another type of Asiatics must necessarily take the profoundest interest in that most conspicuous natural feature on the globe, the Himalayas, and the watershed which roughly forms the frontier, from where the three empires of Russia, China, and India meet for 3000 miles down to Burma. For myself personally I have always taken a very special interest in this frontier, firstly because I happen to have been born on it, and secondly because I have spent the best years of my life, first of all in exploring, and afterwards in conducting our relations with the various peoples who inhabit it on both sides. We have, I think, now acquired a very fair knowledge, from the political, military, and business point of view, of this frontier. We know pretty well the portions across which no human being can possibly pass; we know those other parts over which it is just possible to scramble; and we know those others, of which some very remarkable pictures were given by Mr. Rose, and where small forces can, with difficulty, pass along. We know also the caravan tracks. The barrier, though a great one, is not absolutely impregnable. From the Chinese side there has been from time to time incursions to the Indian side, and from the Indian side into the Chinese. But while we have this information on the military and political aspect, there is, as Lord Curzon has very justly remarked, a very great scope still for geographical exploration. Only last year Dr. Longstaff related to us how he had discovered a mountain which has proved to be 24,000 feet in height. All the tract
round the mountain, on the far side of the Karakoram range, at the source of the
Oprang and Yarkand rivers, has still to be explored. There is also the great geogra-
phical problem of the junction of the Sangpo river and the Brahmaputra to be
solved, and there is the further problem of the sources of the Salwin. For many
years there is ample field for geographical exploration on the far frontiers of
India.

Sir Herbert Thirkell White: I am very glad to have your permission to
say a few words this evening, for of the important part of the frontiers which
Mr. Rose has so admirably described I have some recent knowledge. I was familiar
with the Burmese frontier of China both before and after the establishment of the
Consul-Generalship at Yunnan-fu and the Consulate at Tengyueh. And I gladly
bear testimony to the great improvement that has been effected in our frontier
relations, and to the loyal and capable assistance which we in Burma have always
received from Mr. Rose and his distinguished predecessors, among whom I may
mention Mr. Litton, whose premature death was a loss to the Empire, Mr.
Wilton, Mr. Sly, and Mr. Oitewill. Although, of course, in no sense under the
Government of India or the Government of Burma, advice and assistance have
always been voluntarily and most readily given to us, and many measures of value
to Burma have been initiated by the Consular officers. It is by their help that
frontier disputes are now settled amicably at periodical meetings with Chinese
officials. It was owing to their good offices that we were able to survey the pro-
jected line of railway from Bhamé to Tengyueh. And I venture to hazard the prophecy
that this is the route by which some day Burma will be linked with China by rail.
It is mainly due to the hearty co-operation with the Chinese frontier officers that
our relations with the Chinese have of late years been exceedingly cordial and
satisfactory. I am sure that this good tradition is being and will be maintained.
Mr. Rose has given us a characteristically modest account of his journey to
Pienna. It was a very hazardous and difficult journey, and it was of extreme value in
connection with the settlement of our frontier on the north-east of Burma, which it
is not desirable that I should more than mention. On the whole, during the twenty-
six years that have elapsed since our occupation of Upper Burma we have found the
Chinese good neighbours. Yunnanese particularly we welcome as settlers and traders.
There is need, if I may discreetly say so, of constant and watchful care against
attempts at encroachment, but so long as that care is duly exercised, so far as
the Burmese portion is concerned the order and peace of our frontier will be
maintained.

The President: We have here present one whom I think you would like
to hear, Mr. Claude White, who is our greatest authority on that part of the Indian
frontier which embraces Bhutan and Sikkim. He was in charge of our political
dealings with those states at the time of the Tibetan campaign, and did more than
anybody else to secure the happy relations that now unite us with the rulers of
those states.

Mr. Claude White: I have not much to say on this subject. The only part
of the frontier I know anything about is that of Sikkim and Bhutan, and in those
two countries I had very few communications with Chinese officials, and had very little
to do with the Chinese generally. As Lord Curzon said, these two countries must
be, and always will be, I hope, quite distinct, and always be under the protection of
the British Government, and not under that of China. I am also sorry that the
Tibetans have been brought so much under the influence of the Chinese. Personally
I should have liked to have seen them more independent, and, as Lord Curzon has
said, more of a "buffer" state. The Bhutanese have taken up our side entirely,
and there is no question of the Sikkimese. I believe the Chinese have made some
overtures to Bhutan and Nepal, which have been rejected by these states, and I am very glad they have been. The Chinese should not be allowed on the Indian side of the Himalayas.

The President: We will conclude with a vote of thanks to Mr. Rose for his excellent paper.

EXPLORATION IN THE ROCKY MOUNTAINS NORTH OF THE YELLOWHEAD PASS.*

By J. NORMAN COLLIE, Ph.D., LL.D., F.R.S., F.R.G.S., etc.

The part of the Rocky mountains, that run north through what is now the Dominion of Canada, have only in the last twenty-five years been made accessible to the ordinary traveller. In 1886 the trans-continental railway, the Canadian Pacific Railway, was opened. Before that time it would have taken many months journeying across the prairie to reach even the outlying foothills, whilst from Vancouver on the Pacific it is impossible to say how long would have been spent fighting with the canyons of the West, that are filled often with the densest forest, and down which the waters of countless rivers run.

The history of this "Great Lone Land" is practically the history of the fur trade; of late years the prospector has wandered through many of the valleys leading up to the main chain, but still most of the country lying within 20 miles of the watershed is almost unknown. No human beings live there, Indians seldom penetrate into these mountain fastnesses, the land is deserted. It is not a country that appeals to the settler; narrow valleys filled with pine forests, with swamps or muskegs; rapid rivers, and not too much arable land; it would yield no crops, neither is there grass except in a few isolated spots. The snow, too, begins to lie in October, and it is not till the following May or June that it clears away.

The first man who crossed the continent in these latitudes was Sir Alexander Mackenzie in 1793; he crossed the mountains at the headwaters of the Peace river. From 1799–1814, Alexander Henry, one of the hunters of the North-West Company, kept a diary of his journeys in Western Canada;† in it one can find much information of the wild life of the pioneers of those days. During the same period David Thompson collected an immense amount of knowledge about the same districts. He discovered the source of the Columbia river; he was the first to cross the mountains by more than one pass; but his greatest achievement was "a Map of the North-West Territory of the Province of Canada." In 1809 Simon Fraser and Jules Quesnel explored the Fraser river to its mouth.
