# VOYÁGES

#### TO THE

## EAST-INDIES;

#### BY THE LATE

### JOHN SPLINTER STAVORINUS, ESQ.

REAR ADMIRAL IN THE SERVICE OF THE

STATES-GENERAL.

Translated from the original Dutch, By SAMUEL HULL WILCOCKE. WITH NOTES AND ADDITIONS BY THE TRANSLATOR.

The Whole comprising a full and accurate Account of all the prefent and late Poffeffions of the Dutch in India, and at the Cape of Good Hope.

> ILLUSTRATED WITH MAPS. IN THREE VOLUMES.

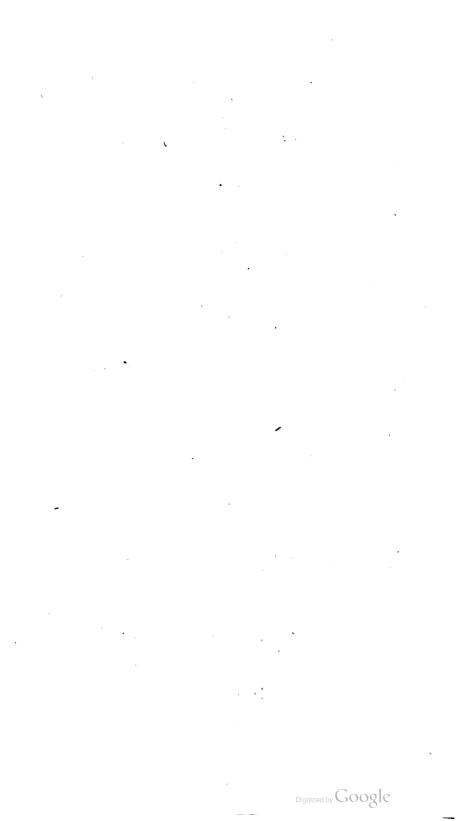

# VOL. I.

A VOYAGE TO THE CAPE OF GOOD HOPE, BATAVIA, BAN-TAM, AND BENGAL, WITH OBSERVATIONS ON THOSE PARTS, &C. IN THE YEARS 1768-1771.

### LONDON:

FRINTED FOR G. G. AND J. ROBINSON, PATER-NOSTER-ROW.

# PREFACE.

THE original of the work now offered to the public, has met with much approbation in Holland. It conftituted, originally, two different works; the account of the voyage to Batavia, Bantam, and Bengal, having been first published; and afterwards, separately, that of the voyage to Samarang, Macasser, Amboyna, &c. Hence proceeds the different forms in which the two voyages are moulded; and hence fome repetitions occur in the second, of what had been noticed in the first.

Mr. Stavorinus was post-captain in the naval fervice of the States General; but a long period of peace, and the little employ-

A 2

ment

### PREFACE.

iv `

ment that occurred in the Dutch navy for men of enterprize and abilities, prompted him to requeft permiffion to go a voyage to the Eaft-Indies, as captain in the employ of the Dutch Eaft-India Company, retaining, however, his rank of captain in the navy. The accounts of his two voyages, in that capacity, are here given; and his readers will find him, throughout, a man of obfervation and intelligence. He was afterwards promoted to the rank of rear-admiral, which he held at the time of his death.

Acquainted with the family, though not with the perfon, of the author, during a refidence at Middleburgh, in Zealand, the tranflator has endeavoured to do all poffible juftice to his work, in the drefs in which he now prefents it to the public. A regard for truth, however, obliges him to declare, that he has had to ftruggle with much difficulty in correcting paffages, which, in the Dutch original, are extremely faulty, from the negligence

ligence of the editor; the original abounds in typographical errors, and in mistakes in numerical characters, fome of which the translator has rectified from their obvioulnefs, and a certain knowledge of the true reading, others from conjecture, and others, though as few in number as possible, he has been obliged to let remain as he found them.

With refpect to the notes and additions which he has made, they are collected from every authentic fource within his reach; from the accounts of other travellers, from other Dutch writers, from authentic documents, manufcripts, and ftatements, and, in a few inftances, from oral information : the work, together with the additions, he flatters himfelf will be found to contain much new information refpecting the actual and late poffeffions of the Dutch in India, which, in the prefent fituation of affairs, cannot fail of being extremely interefting. He had, for

### PREFACE.

for fome time previous to the publication of these voyages, collected the materials whence his additions have been made, with an idea of forming them into a general account of the Dutch Indian settlements; but meeting with these voyages, and thinking an English version of them could not fail of being acceptable, he conceived himself more adequate to the task of giving a translation, with the additional information required, to render the whole as complete an account of the Dutch settlements as his materials would admit of, in notes, than to that of composing an original work himself upon the fubject.

## VOYAGE

THE CAPE OF GOOD HOPE, BATAVIA, BANTAM, AND BENGAL;

IN THE YEARS 1768-1771.

### CHAPTER I,

Departure from ZEALAND.—The SHINGLES.— SouthAMPTON.—PORTSMOUTH.—GOSPORT. —Departure from SPITHEAD.—The NEEDLES. —Jlands of PORTO SANTO and MADEIRA.— Flying-fs/b.—Islands of SAL and BONA VISTA. —Dorados.—Dolphins.—Albicores.—Bonitos.— Sharks.—Pilot-fs/b.—Cape St. Augustine.— The Abrolhos.—Signs of Land.—Variation of the Compa/s.—Anchorage in TABLE BAY, at the CAPE OF GOOD HOPE.

ON the 10th of June, 1768, the East-India Company's ship the Snork (the Pike), under my command, received her final difpatches; and upon mustering the crew, for the last time, we found that the number of men on board amounted to two hundred and

VOL. L

B

twenty-

twenty-five; confifting of one hundred and forty-feven seamen, seventy-seven soldiers, and a passenger, who was a mechanic. We were fitted out, as usual, for nine months, and were bound to Batavia, by the way of the Cape of Good Hope. On the 13th, the wind coming round to the eastward, we flipped our cables, in the road of Rammekens, and fet fail; but on reaching Flushing roads, the tide failing, and the wind veering to the fouth, we were obliged to come to an We remained here, windbound, anchor. till the 24th, when we again weighed anchor, and put to fea with a fresh gale from the east, and fine weather, faluting the town of *Flushing* with fifteen guns. We were clear of the land at nine o'clock A.M. and returning the farewel-falute of the pilotboat that had accompanied us, we steered for the Straits of Dover, and loft fight of the ifland of Walcheren about noon. At funrife, the next day, we faw the opposite coasts of England and France; of the former, the North and South Forelands, and of the latter, the high land in the neighbourhood of Calais. At noon we found ourfelves abreaft of Dover, which is the first place on the English coast that

that appears on entering the Channel; here the eafterly wind failed us again, and it began to blow a ftiff gale at s.w. which made us refolve, the next day, to run in behind the *Sbingles*, and there wait for a more favourable opportunity of proceeding on our voyage. Befides feveral other fhips, we found lying at anchor here, our States' frigate, the Young Prince of Orange, commanded by Count BYLAND, fent out to cruife for the homewardbound Eaft-India fleet, and which had failed from Campvere the fame day we left Flu/bing.

The Sbingles is the name given to a large fand, that firetches out full a league and a half from the Englifh coaft, fomewhat to the weftward of Folk/tone. It appears above water, but is very low, and would be very dangerous, efpecially in the night, were there not a lighthouse at its extreme point, whereby ships are enabled to perceive and avoid the danger. Vessel lie in safety here, protected from the s.w. and west winds; but being open to the s.s.w. and fouth, when the wind veers a point lower, they must of necessity immediately put to sea.

On the 29th of June, we faw two home-B 2 ward-

wardbound East-Indiamen standing towards us; upon which the States' frigate, the Young Prince of Orange, weighed anchor, and fet fail. in order to convoy them to Holland. In the night we had an eclipfe of the moon; the beginning of which, by my observation, gave a difference of 7' 21" in time between Paris and our fituation at anchor, or 1° 52' 45" west longitude from the meridian of Paris.

The following day, being the 30th of June, the wind came round in the evening to the eaftward; whereupon we left the Shingles a short time before midnight, and held our course farther down the Channel. But on the next day, having fcarcely reached as far as the life of Wight, the fky began to assume a black and menacing aspect towards the west, while the east wind now wholly failed us. Apprehensive of the coming ftorm, we handed all our fails, and it toon burft upon us with the greatest vehemence: it was accompanied with the most tremendous thunder and lightning, and feemed to threaten inevitable destruction. On shore, as I afterwards was informed, it caufed great devaitation : on the road from London

London to Port (mouth, many trees were ftruck by the lightning, and torn up by the roots; while much damage was done in all the farms and gardens thereabouts. This thunderftorm continued about three hours. from feven till ten o'clock at night, without however doing our thip any material da-The wind then veered to the s.w. mage. where it remained flationary, and blew mostly in heavy gales, without intermission, from that quarter, till the 7th of July, when it increased to a violent storm. This induced us, the next day, to determine upon putting into Portfmouth, that we might not be driven farther back up the Channel; and that the crew might not be unnecessarily haraffed, without our being able to advance on our voyage, fince our men were daily falling fick, and thirty of them were already unfit for duty. We accordingly reached Spithead, and caft anchor there the following day, being the 8th of July.

While we lay here, I made an excurfion to Southampton, which is fixteen English miles, or about fix hours' walk from Gofport, a kind of fuburb to Portfmoutb, lying on the opposite side of the harbour. The road

B 3

road to that place, leads through a hilly, unpromifing, and barren country, but which affords food for fheep, feveral flocks of which we met with on our way. Here and there were fmall running ftreams, that flowed down from the hills, into the vallies. We ftopped halfway at a village called *Titchfield*, being two long ftreets of tolerably goodlooking houfes.

Southampton is a town, fituated on a river, which runs into the fea opposite to Newport, in the Isle of Wight, navigable above the town, for veffels of a moderate burden, and called Southampton - water. When the Danes were in possession of England, Southampton was the feat of their kings. It is naturally ftrong, being almost furrounded by two branches of the river : it is befides encircled by a wall of hewn ftone, which bears strong marks of antiquity. From the riverfide, runs a long and broad ftreet, which is adorned on both fides by very handfome houses, reaching as far as the landgate, which opens to the London road. Over the gateway, is the statue of Queen ANNE, as large as life. This long ftreet is the principal, and, indeed, may be faid faid to be the only one, the others being of hardly any confequence \*. The town is much frequented in the fummer feafon by the English nobility and gentry, on account of its agreeable fituation; and every kind of diversion, balls, concerts, plays, &c. are then to be met with, as was the cafe when I visited the place.

Portfmoutb is at prefent a well-fortified town, and the works which furround it, particularly on the landfide, are very confiderable. Clofe to the town, on the northfide, are the King's building and dockyards, his magazines and arfenals. The immenfe quantities of naval and military ftores, that are kept here, are incredible. Moft of the Englifh fhips of war are laid up here, in time of peace, but they are always kept afloat. The largeft fhips of their navy are to be feen here: I was on board of one, a three-decker, which meafured on the lower deck, one hundred and ninetyfeven feet Englifh, being equal to one hun-

\* The additions and improvements which have been made in later years, fince the time Mr. STAVORINUS visited Southampton, 1768, make the town assume a different appearance from what is here described. T.

**B**4

dred

dred and ninety-five and a quarter feet Ame fterdam, and which carried one hundred and twenty guns \*.

Opposite to Port/mouth, lies the town of Go/port. The inlet between both, which is wery wide, is used for a harbour; its entrance is defended by feveral confiderable batteries. Go/port has many streets, and is crouded with shops, which in time of war, and when there are many ships here, are much frequented, and very flourishing.

On a point of land, which is called Spithead, whence the fame appellation is given to the road before it, where the King's fhips ride, there is a large and flately hospital for the feamen of the navy, which is kept exceedingly clean and neat, and in which the fick are treated with the greatest care and attention.

The 24th of July, the wind becoming favourable, we weighed anchor in the morning, and endeavoured to put to fea, round the west-end of the Isle of *Wight*, or past

\* The largest ships in the Dutch navy, are of 74 and So guns; their harbours will scarcely admit of ships of greater force. T.

the

the Needles; but in the afternoon, we were obliged, by a change of wind, to let drop our anchor before Cowes, a town in the Isle of Wight, whence a great trade is carried on to America; and on the 26th, as it began to blow hard, and the road of Cowes was not very fafe, we returned again to Spithead. The next day, on the wind again coming round to the east, we left Spithead, for the fecond time, but we still could not pass the Needles; for coming near them, we found the tide against us, and the wind too fcanty to fail out; and we were therefore obliged to turn back again, and anchored before Yarmouth, which is a fmall place in the life of Wight.

The Needles are high fharp rocks, like pyramids, fituated at the western end of the life of *Wight*, and close to which ships must fail. On the other fide of the channel, lie the *Sbingles*, a fand which is dangerous to be approached too near.

On the 28th of July, however, we were fortunate enough to clear the land; but it was only on the 4th of August, that we left the Channel, and steered our course, in order to run in sight of the island *Porto Santo*. Between

Between ten and eleven o'clock on the morning of the 6th, we observed a remarkably strong aurora borealis, stretching from w. N. w. to N. N. E. The fky appeared, in that quarter, perfectly in flames; the rays, which shot forth in a serpentine direction, from the horizon to the zenith. were inceffant: and that whole fide of the heavens feemed to be agitated, and in combuffion : the horizon was clouded, and the wind northerly, blowing a light gale; the greatest heat that day was 67° by Fahrenheit's thermometer: and at noon our latitude was 48° 1' north. For fome days following we had a fteady north wind, with fresh gales, so that on the 16th of August we ran in fight of the islands Porto Santo and Madeira. We here found ourfelves 3° 6', or 39 leagues, more to the eaftward than our estimated longitude, fince we had taken our last observation, on leaving the Lizard Point. Many veffels make an easterly mifreckoning in these feas; and it may, with great probability, be attributed to the indraught of the currents, in the bend between Cape Cantin, and Cape St. Vincent, towards the Straits of Gibraltar. Much

Much care ought therefore to be taken in these latitudes, especially in the night. The weather is here likewise often very cloudy, which was the reason, that we did not see *Porto Santo* in the morning, till we were within three or four leagues of it : whereas it is visible in clear weather, at the distance of eight or nine leagues off.

Porto Santo appears in the w.n.w. with four high hills, the northernmost of which feems as if it were feparated from the others, but it lofes that appearance, on failing two or three points farther. We ran along the ifland at the diftance of a fhort league, in order to take an accurate view of it. It is mostly hilly, and had also, through good glaffes, an arid and barren appearance. It has a fteep rocky fhore all round, except on the foutheast fide, where there is a low inlet or bay, along which fome houses are built. There is a great rock on its north-fide, lying detached from the island, which, when it bears w.s.w. perfectly refembles a church with a fleeple, the latter rising from its fouthern extremity. There are, befides this, feveral other rocks, as [ 12 ]

as well under water as above, lying all round the island.

Madeira lies s.w. about fix or feven leagues from Porto Santo. It is much larger, and has fome very high mountains. When abreast of Porto Santo, you first perceive a great haziness, very like a thick smoke, to the s.w. nearly ten degrees above the horizon, which on a nearer approach is diffipated, and the high land of Madeira rifes to view, yet still enveloped with clouds halfway downwards from the fummits of the hills. To the s.E. of it. lie three fmall islands, which are very high, but barren and uninhabited; they are called the Ilbas Defertas, and corruptly by our feamen, the Serfleros, and are seen at a great distance. The fea is not discoloured round any of these islands, as is the cafe round many others, which must chiefly be ascribed, to there being no ground, but very close to the shore. whereby the water retains its azure limpidnefs. We found that the variation of the compass was here 17° N.w. and the greatest heat of the day was at the fame time, on board our fhip, 78°.

The

The number of fick began now greatly to increase. About fixty or feventy of the crew were already confined to their births. and four had died. The prevailing diftempers were bilious fevers and spasmodic colics; although we had but little rain, and no excellive heat, the thermometer feldom rifing above 78°. I therefore now would not fuffer the men to drink beer, but I had it mixed with their barley-porridge in the morning, and only allowed them water to drink. The confequences of this regulation were very falutary; for very few fell fick afterwards, and those that were ill recovered, though gradually, fo that on approaching the line, we had but few on the ficklift.

We now began to fee many flying fifh \*, and we frequently made a good breakfaft, upon fuch as had fallen upon the fhip, during the night, as they frequently do, without being able to raife themfelves again, and which we found lying on the deck in the morning. They are commonly of the fize, and much of the

\* Exocortus volisans.

fhape,

fhape, of herrings, though they are, in general, rather fmaller than larger; the head is fomewhat obtufe, the back blackifh, and the belly white; they are the beft bait that can be put to a hook, for catching of dorados and albicores: they are mostly to be met with between the tropics, though they are fometimes feen as far as the thirtyfecond and thirty-third degrees of latitude; yet at this distance they are but rarely found, and never wander into higher latitudes.

The day after we had loft fight of the iflands *Porto Santo* and *Madeira*, we met with the fettled north-eafterly tradewind, with which we fteered to the weftward of the ifland *Palma* (the most wefterly of the *Canary* iflands), and passed the tropic of cancer on the 22d of August, five days after we had left *Porto Santo* and *Madeira*. The greatest heat on the day we passed the tropic was  $78\frac{1}{2}^{\circ}$ .

On the 27th, at about three o'clock in the morning, we came in fight of the *Isle* de Sal, one of the Cape Verde islands. We had for three days been accompanied by a number of landbirds, among which were many fwallows; and these kept close to us till

till we came in fight of land, and then they left us.

The island Sal is not very high, except on the north-fide, where it is diftinguishable by three hills, the northernmost of which is the highest. The land to the fouthward of these eminences is middling low, and flopes into the fea, at the s.E. point. The latitude of this point was, by observation. 16° 34' north; and the variation of the compass  $10\frac{1}{4}$  degrees N.W. The thermometer on board flood that day, at two o'clock P.M. between 83° and 84°. The island appeared to be about three or four leagues in length, and full half as broad. There is a very dangerous reef, that extends out from its north-fide, but it feemed elfewhere to be tolerably bold and fafe.

About fix or feven leagues nearly fouth of *Ifle de Sal*, lies the ifland *Bona Vifta*, which is almost one-third larger, and rather lower, than the former : it has two eminences of a middling height, that appear distinctly upon it. There are two reefs, one at the northfide, and one at the fouth-fide, which stretch out to the eastward, and which are both very dangerous. The East-India Company's fhip [ 16 ]

thip Leimuiden, was wrecked on one of them in the year 1769. Both these islands appeared very barren; and Bona Vista seemed sandy, being here and there interspersed with low fandhills.

We found ourfelves, by observation, at these islands, 12½ leagues more to the westward, than our estimation, since our last obfervation of the longitude off *Madeira*. The light winds and high-running sea, prevented us from passing to the eastward of the island *Bona Vista*; and we were at last obliged, in order to avoid the danger of touching upon the reefs, to run between that island and *Sal*, after we had spent four-and-twenty hours in vain attempts to weather *Bona Vista*. On the 28th, in the evening, we lost sight of these islands, and directed our course towards the line.

The northeast tradewind failed us two days afterwards, and changed to fouth and s. s. w. which was exactly in our teeth. We were then in 13<sup>1</sup>° of north latitude. These variable winds were frequently accompanied by violent thunderstorms and heavy showers of rain, of which we availed, in order to fill our empty watercasks, so that this

this neceffary element could be more liberally diffributed to the crew: and which was of great benefit to them, on account of the encreasing heat of the weather. Yet we had not much calm, till we again came into the courfe of the fettled foutheast tradewind, and we had hardly any fick on board. We were mostly encountered by thunderstorms, about the time of the rifing and fetting of the moon, which feems to have more influence on the weather, within the tropics, than without them. The infructions which are put on board of our East-India Company's ships fay, that in these seas, the wind veers to the northward, at the new and full moons: this, however, we never experienced; but, on the contrary, we met, at those times, with hard gales from the s.w. which were fometimes accompanied by a lowering fky, and violent fqualls. The nearer we approached to the line, the more fifh we had about the fhip, of which we caught large quantities; dorados, albicores, and likewife bonitos, fharks, and others ; which afforded a most welcome and agreeable refreshment to the seamen.

VOL. I.

The

The dorado, or john-doree\*, is one of . the most delicious feafish that is caught. It is long and flat, and covered with very It is from four to eight feet fmall scales. in length; but I feldom faw any caught that exceeded fix feet, and ten or twelve pounds in weight. The head is obtufe and round, and immediately behind it is the broadest part of the fish, while the body is thin and narrow, tapering until it reaches the tail. When this fifh appears near the furface of the water, it shines with a most lively mixture of various colours, blue, green, filver, and gold. It fwims with great velocity, and darting at its prey, the flyingfish, it is fometimes feen to leap feveral feet out of the water. Although the dorado is the fineft fifh that is caught at fea, it is yet fomewhat dry eating. The tail roafted is very good, and taftes much like a roafted cod's-tail.

The dolphin +, which I fuppoied to be the male of the dorado, has the fame fhape and tafte, but is not adorned with fuch magnificent colours.

\* Faber, a species of zens. + Coryphana bippurus.

The

The albicore \* is a bulky fifh, with a tharp head, thick belly, and thin tail. The back is of a dark-brown hue, and the belly is white. Its flefth is firmer than that of the dorado, but it is drier, and has not fo fine a flavour : it is nevertheless very tafteful food for a failor. We caught feveral albicores that weighed upwards of fixty and feventy pounds, and which we had fome difficulty to drag on board by the line. They never fwim alone, but always a number together. They are caught by a hook, or are firuck with a harpoon. . They do not only prey on the flyingfish, but likewife on all other small fishes. We one day had a diverting fight of their manner of purfuing their prey :---we faw, at fome diftance, a large number of albicores, that fwam, as it were, in a circle, and beat the water with their tails with great force, while in the middle, we perceived a great quantity of fmall fifh ; on approaching nearer, we found that they leffened the circle gradually, and all the little fearful fifnes were thus preffed close together, till in the end they fell a prey to their enemies. These

> • A fpecies of *fcomber*. C 2

fmall

fmall fifthes, which were fhaped like fmelts, were often in fuch quantities near the fhip, and efpecially at the ftern, that the men took whole bafkets' full; and after letting them lie two or three days in falt, they eat them like anchovies. Whenever we faw them, we were fure likewife to obferve their followers, the dorados and albicores.

The bonito \* appears, both with respect to shape and taste, to be the same fish as the albicore, the only difference being that the former is much less. I believe that the same fish, which when young is called a bonito, when it grows older and larger, acquires the name of albicore; at least, I could not perceive that they differed in any thing but in fize.

When the weather was fine and calm, we now and then caught a fhark, but more for the fake of the fport than for culinary purposes, to which this fish is very little adapted; yet the tail fometimes affords a meal to the failor; but it must always be first trodden upon, or otherwise bruised, till a light foam exudes from it. The shark is a voracious and carnivorous animal, and

\* Scomber pelamys.

catches

catches at, and devours every thing within its reach. It is highly dangerous, for those who may have the mifchance to fall overboard. and for fuch as bathe or fwim in places where it inhabits. Its prey would never escape, were it not for the difficulty which the fhark has to catch it. from the fituation of its mouth : this opens, as it were, under the throat, the fnout protruding eight or ten inches farther: To that, when the fhark approaches its prey, it fwims directly under it, and is obliged to turn on its back, and then fuddenly fnaps at it, and fwallows it whole. The mouth is very wide and broad, and is furnished with a triple row of teeth, which all fit into each other, and cut every thing in two that comes between them. I have feen an iron crow, which had been thrust into the mouth of one of these animals, and in which the marks of the teeth were plainly to be feen. Its greateft force is in its tail. When caught, it beats the water with its tail, and makes it foam; and when hauled on deck, it would break, by its means, the limbs of any one who might venture to approach too near. Its fkin is very hard and rough, especially when dried.

**c** 3

It

It appears on the back and fides of a dirty green colour. It is commonly caught by a large hook, fastened to a double or triple braffwire of four or five feet in length, for cordage of any kind would be immediately bitten afunder : this braffwire is attached to a long and ftrong cord, which is made fast on board : about fix feet above the hook. a piece of wood is fixed to the line, which ferves to keep the hook fleady, and this is baited with a piece of pork or beef. As foon as the fhark has taken the hook. it must have free play with the line, particularly if it be a large one, which is eafily perceived, the water of the ocean being very clear and transparent; after which the line must be fostly drawn in again, and fucceffively veered out, whenever the fhark begins to pull, till in the end its forces be exhausted; it must then be housted on board by ropes round its body, and killed, or flunned, by repeated blows on the head with handfpikes or iron crows, when the tail can be cut off without any danger. The thark has generally five, fix, or more, fuckingfifh \* hanging to it, which will not let go their

\* Echeneis remora.

hold,

hold, and which require a degree of force to pull them off.

Befides the fuckingfifh, there is another fifh that accompanies the fhark; it is called the pilotfifh \*, becaufe it is fuppofed to conduct, or pilot, the fhark to its prey. This fifh is much lefs eafy to be caught than the fhark itfelf; yet we were fortunate enough to ftrike one with an eelfpear, for they never bite at a hook. It was eight inches in length, and ftriped transverfely with darkblue and white lines, of about an inch broad, running round its body like fillets. It weighed about two pounds, and was very nice eating, and not fo dry as other feafifh.

After much difagreeable delay, we at laft got into the s.E. tradewind, on the 17th of September, in the north latitude of three degrees and a half; and on the 22d, in the evening, we paffed the equator, on the fame day and hour that the fun entered the fouthern figns; the heat of the weather by the thermometer was 77°, and our longitude, by estimation, fix degrees and a half west of *Teneriffe*.

\* Gafterofteus ductor.

C 4

On

On the 30th, we were in the latitude of Cape St. Augustine, and on the 6th of October, we had paffed the Abrolbos. The former is the eastern extremity of Brazil. If once one falls below, or to the westward of this cape, it is not an eafy matter to double it, without again croffing the line, to endeavour to get into the track of the westerly winds, in the thirty-fourth or thirty-fifth degree of north latitude, and then running with them fo far to the east, as to get into the proper courfe for passing the line again; cases of this kind are not unfrequent. The Abrolbos are an affemblage of fands and rocks, fome of which are above water, and fome under; they lie in about eighteen degrees fouth latitude, and extendout to fea full twenty leagues from the land. Ships coming upon them are in great danger of being loft, or at leaft of lofing their voyage; wherefore the East-India Company direct their commanders, on having paffed thefe dangerous shoals, to perform a thanksgivingfervice, and to distribute a quart of wine per man to the crew.

The variation of the compais, in the latitude of Cape St. Augustine, was two degrees

5

N.W.

N.W. and in that of the *Abrolbos* half a degree N.E.

In 22° fouth latitude, we loft the eafterly tradewind, and had variable winds, though moftly from the eaftward, and fometimes from the north, as far as 30° or 31°, where the wind became wefterly. Whenever it blew the leaft to the fouthward of weft, we experienced a confiderable degree of cold, and the thermometer did not rife higher than 53° or 54° in the warmeft part of the day; while it was much warmer when we had northerly, or northwefterly gales.

The fcurvy began now to make its appearance on board, and in a fhort time many of the crew became unfit for duty, and feveral of them died. But the ravages of the difeafe were not fo great as we might have expected, from the length of the voyage, it being now three months fince we had left England.

On the 10th of November, we faw for the first time *trumpets*, or fea-bamboo \*, floating on the ocean; this is a thick reed, with large pointed leaves, and a calyx, refem-

\* Fucus buccinalis.

bling

bling the mouth of a trumpet, whence it has its name. We likewife faw petrels \*. and pintados +; which, although both feabirds, never go far from land. The first, are about the fize of a common fowl, and are quite black; they are very lumpifh, and fly heavily, and close to the water. The others may, for fize, be compared to a fmall goofe; they are always met with in pairs: there is another kind that fly fingly, and go much farther from land; they are white. with black fpots. From thefe figns, but especially from the variation of the compass, having encreased to 18° N.w. and thus to within two degrees of the variation in Table Bay, at the Cape of Good Hope, we concluded that we were not far from that famous promontory. The variation of the compass is the easiest, and almost the furest, rule that is observed by our navigators, to arrive at the Cape, and to determine the longitude they are in; for neither folar nor Junar eclipfes occur frequently enough for the purpose, and it is fcarcely possible to take an observation by the fatellites of Ju-

Digitized by Google

piter from on board of a ship, on account of its continual motion. If the inftrument be correct, and the observation accurate, the variation of the compass may be depended upon; for inftance, in the latitude of Cape St. Augustine, on the coast of Brazil, when the northeasterly variation is no longer obfervable, that is, when the needle flews the true north, or before it begins to take a westerly variation, you may then be assured that you can double that cape; and in the same manner in the latitude of the Abrolbos; where there is no danger as long as the variation is 2° or 3° N.E. Thence to the eastward or foutheastward, the variation encreases, and the needle progreffively turns more to the west, as far as the longitude of Madagascar, where, in 39° or 40° fouth latitude, it at prefent, points 27° to the westward of the true north : and again, from that part, it decreases in passing to the straits of Sunda. more and more, till in 12° or 13°, it again shews the true north. At the Cape of Good Hope, the variation was this year full 204° N.W. The westerly variation augments every year, and it has for fome time been found, that

at

[ 28. ]

at Paris, its annual increase amounts to  $10\frac{1}{2}$ minutes or one-fixth of a degree, according to the Connoissance des Temps pour l'Année 1771.

At laft, on the 17th of November, about three o'clock, P.M. to our great joy, we difcovered the land of *Africa*, near the *Cape* of Good Hope, the *Table* Mountain bearing eaft, about twelve or thirteen leagues off; but it being too late in the day, to attempt reaching the road, we thought it advifable to ply off and on, during the night, and not to try to enter the bay, till the next day.

We now found that our longitude was  $1^{\circ} 45'$ , or 22 leagues, more to the weftward than by the fhip's reckoning, fince our laft obfervation at the ifland *Bona Vifta*, on the 27th of August; fo that we had but a fmall mifreckoning for fuch a length of passage. The number of dead fince our departure from *Flufbing* was thirty; and we had fifty-eight on the ficklist, mostly down with the fourvy.

The next day, early in the morning, we carried a prefs of fail, and steered towards *Table* Bay, between the *Walvifeb*,

or

or Whale Rock, and the Lion's-tail: but owing to its falling calm, it was not till four o'clock. P.M. that we reached the anchorage in the inner road, and faluted the fort with thirteen guns. We found lying at anchor here the East-India Company's Hoy, the Snelbeid (the Speed), and a French ship, bound to the island Bourbon. On entering the road, the land has no very agreeable afpect, appearing only to be fteep and rocky mountains, nearly defitute or verdure, while the fort and town of the Cape are not feen; till very near the anchoring-ground. But of the feveral particulars relative to the Cape, I shall speak more at large in my observations, at the close of my journal.

## [ 30 ]

#### CHAPTER II.

CAPE OF GOOD HOPE.—Journey up the TABLE Mountain.— Fine Prospect from its Summit.— Arrival of the Swallow, Captain Carteret, at the Cape, from the South Seas.—Departure from TABLE Bay.—The Island St. PAUL.— Amsterdam Island.—Singular Noife coming up out of the Sea.—Violent Storms.—Engano.— REEF Island.—The high Land of SUMATRA.— Entrance into the Straits of SUNDA.—Islands of KRAKETAU, DWARS IN DEN WEG, WAPENS VAN HOORN, ONRUST.— Anchorage before BATAVIA.

**NOT** long after our arrival at the Cape of Good Hope, I had the curiofity to afcend the Table Mountain, the difficulty of which, I was affured, would be well compenfated by the pleafure, the jaunt would afford me. Accompanied by three other gentlemen, who were actuated by the fame motives, and provided with fome provisions and a guide, I fet off upon this excursion, about half past two in the morning, from Capetown, which is fituated at the foot of the mountain. The road thither, led along fome gardens, gardens, which the inhabitants of the town had laid out here and there. as a kind of rural retreats. For fomething lefs than half an hour's walk beyond thefe, the way was eafy, and the acclivity little; farther on it began to be more fteep, running along a narrow ridge of the mountain, which ended about halfway up abruptly, against the fide of a precipice. This place, the inhabitants of the Cape call the Krants, or Wreath. We arrived there at funrife, being about half past four, and made a refting place of it. This ridge was formed, on either fide, by corresponding steep and profound hollows. On the right hand, murmuring over the pebbles, which abounded in the hollow, ran a rivulet, whofe fource was at the fummit of the mountain, and which fupplies the town with water. The ridge itself was nearly overgrown with underwood, which was formerly the refort of wild beafts, although none at prefent inhabit it : at least we neither faw nor heard any thing of them.

Hitherto the afcent was not very difficult, but the path now began to be very precipitous, and fo narrow, that it was fometimes

times not above two feet broad. There were feveral places, which we had to clamber up, which deviated little from a perpendicular line. On our left, we had a wall of fleep rocks, heaped, as it were, in maffes upon each other; and on the other fide, a deep chaim, into which it was both tremendous and dangerous, to venture a look. In climbing up, we had to hold ourfelves fast by the shrubs, which grew up from between the interffices of the rocks: and the labour and fatigue of the afcent, generally obliged us to take breath, whenever we came to a place that allowed us leifure. The higher we came, the more difficult we found the path, fo that we had in the end, much to do to hold fast by the shrubs, to prevent our falling down from the dreadful height, and being dashed to pieces. Sometimes. when we met with large ftones, and had room to look about us, we rolled them downwards, and following them with our eyes, perceived them in their fall, fucceffively loofening many others, and heard them together clattering with a horrid noife down the steep sides of the chasm. We fometimes likewife met with large maffes of

of ftone, of full twenty feet fquare, which had been torn from the mountain, and lay difperfed in different fituations down its fide. The ground on which we trod, confifted in nothing but loofe ftones, heaped upon each other; the fharp fides and angular irregularities of which, greatly added both to the danger, and to the difficulty of the afcent. If one of thefe was loofened, many others followed it, and rolling away from under the foot, threatened to hurry the unwary traveller down the abyfs along with them, unlefs, with a firm hand, he could grafp the friendly fecurity of fome neighbouring deeprooted fhrub.

It was half past feven when we got to the top of the *Table* Mountain, and found ourselves on the level summit, which is peculiarly called the *Table*; and from the flat appearance of which, seen from below, the whole mass has its name.

We here enjoyed the finest prospect that imagination can conceive. Both wind and weather were favourable. The sky was unencumbered with clouds, and the sunbeams were uninterrupted. Our view on one side was bounded by the mountains of VOL. I. D. Hottentot Hottentot Holland. To the fouthward, we beheld the breakers foaming along Falle. Bay, as far as its eaftern point, and against Roomans Rock \* which lies in it. Between this extensive inlet, and the Table Mountains, appeared the vineyards of Constantia. A little farther was Hout, or Wood Bay; and turning more to the westward, the Lion's Mountain, of which that part called the head, although of a great height, appeared to us like a hillock, on account of the much greater altitude of our fituation : it feemed to lie almost under our feet, notwithstanding it is near ten thousand feet from the Table Mountain; the Lion's-tail, which is more than one thousand feet high, was fcarcely diftinguishable from the plain. The finest fight was that of Table Bay. Robben, or Seal Island +, which lies in the middle of the bay, though it is three miles in circumference, scarce seemed as many feet. The masts of the ships which were in the bay, could with difficulty be differned;

\* Roomans Rock, fo called, from a kind of red fifh, named roomans or red men, by the inhabitants of the Cape, which abound in Falje Bay. They are excellent eating, and feem to be a fpecies of mullet. T.

† This is called Penguin Ifland, in our maps. 7. while

while their yards and tackling were in nowife diftinguishable. The smaller veffels and boats appeared like fpecks : yet Dallen. or Badger Island\*, was perfectly visible. Capetown, upon which we looked directly down. appeared a fmall fquare, in which we could diftinguish the divisions into ftreets, but none of the houfes or buildings, the church excepted; which, however, was also hardly difcernible; and the fort, which lies at a little diffance from the town. It is difficult to defcribe in how fmall a fpace the whole of the above, and the circumjacent country feemed to be compressed. The view down that fide which we had ascended, was in the higheft degree frightful; appearing like an overhanging precipice. The profpect of defcending again that way, was by no means alluring, yet there was no other practicable path.

The air, at this height, was very cool and rarefied, notwithstanding the fun shone very bright, and it was in the summer-feason

\* This is improperly called Coney Ifland, in our maps: it has its name from the quantities of a fpecies of Guinea-rat, or the *cavia capenfis*, with which it abounds, and which are wrongfully called *dafen* or *badgers*, by the people of the Cape. T. in this country. At Cape-town it was a warm day, for the thermometer then ftood at 80°. We caufed the flaves, whom we had brought with us, to collect fome brufhwood, and lighting a good fire, we fat round it, and had a comfortable dinner.

Having thus refted for fome time, we afterwards walked over part of the Table, which took us an hour and a half. Its furface is not perfectly level; for there are here and there rocky irregularities, though feldom exceeding a man's height above the plain. This confifts in many places of bare rock, lying in strata, and undulated like the waves of the fea. On the N.E. and S.E. fides the interffices of the rock are filled with a ftony kind of earth, and produce various kinds of flowers, with which we were unacquainted; fome of them affording a grateful odour, and others fmelling very difagreeably \*. We were fome time fearching for the fifhponds, which we had been told were formerly found on the fum-

\* Dr. THUNBERG mentions, as growing on the fummit of the mountain, the following rare and beautiful flowers, orchis grandiflora, ferapias tubularis, ferapias melaleuca, and the blue difa longicornis; the first and last of which he never could meet with any where elfe. T.

mit

mit of the mountain, but met with nothing In the chinks and hollow of the kind. places of the rock, however, we found fome very fweet fresh water, which had a yellowifh appearance, and which probably had been lodged there by the denfe clouds which cover the Table when the wind blows from the s.R. This water refreshed us greatly, for we had not taken any with us from the town, and were extremelythirfty.

Several fpots, where a little earth had been collected, produced a kind of reedy grafs, with sharp points, and growing tolerably high, interspersed likewise with flowers, as beforementioned. To the fouth and fouthcaft, the Table has a fenfible flope, but it is alfo on those fides bounded by a precipitous defcent of feveral hundred feet, with over-'hanging rocks, and black protuberant masses, fo that it is here utterly impossible to be scaled.

Having remained for the fpace of full four hours on the fummit of the mountain. we began our descent a little before noon; having proceeded downwards for about half an hour, we arrived at a cavity in the rock, which we had overlooked on our afcent, and , which being shaded by a part which jutted out out a good way, formed a pleafant grotto. The ground was covered with fhort grafs. A limpid jet of fweet water, of about an inch in breadth, fprang from the rock at the back of the grotto. We refted upon the foft verdure for about half an hour, and, confuming our remaining provisions, again . fet forward on our return.

The danger and difficulty we found in descending, were even greater than when ascending the mountain. Obliged to look carefully around us, where to fet our feet. we could not avoid beholding at the fame time the dreadful abyfs before us, which was fufficient to make the fleadieft head giddy. The least falfe step was much more dangerous than before ; for while we were clambering upwards, we could fecure ourfelves by holding by the fhrubs, but now we could not do fo, without going backwards, which, indeed, we were fometimes obliged to do. As for fliding down over the loofe and fharp ftones, that feemed to us, not only more dangerous, but alfo impracticable. At half paft two o'clock, however, we reached the flat rock, as it is called, in fafety. This is a long and level fpaco fpace of rock, about two-thirds up the mountain, over which the rivulet which rifes at the top of the chaim guiltes downwards.

We refted here again for a fhort time, and refreshed ourselves with a draught of the clear fountain-water. We then, proceeding farther, entered an easier path than that we had pursued in the morning, on our ascent, and returned to Cape-town about four o'clock in the asternoon. The whole of the next day we could scarcely move either arms or legs, in confequence of the stigue we had undergone; and for a week astigue we had undergone; and for a week asterwards, we felt great pain in our thighs, whenever we attempted to walk, even along a level ground.

Shortly after this, there arrived at the Cape of Good Hope, an English veffel, the Swallow sloop, commanded by Captain CARTERET, who had failed round the world, having left Spithead in the month of August, 1766, and passing through the straits of Magellan, had traversed the Pacific Ocean; and after having stopped fome time at Macasser, had touched at Batavia, D 4 and and now made the Cape, on his way home. Only fifteen of the crew had died during the whole voyage, and the most part of these met their fate between *Batavia* and the Cape.

They kept the object of their voyage a profound fecret. All I could difcover refpecting them was, as I thought, that their longeft ftay had been at the island of Juan Fernandez \*.

Having received back our fick, who were but half recovered, from the hofpital, and the ftrength of the reft of the crew being recruited, by a daily refreshment of good beef, greens, and bread, we left Table Bay on the 12th of December, with two hundred and eighteen hands, to proceed on our voyage to *Batavia*, the chief settlement of the Dutch in India. The southeasterly wind, with which we had left the bay, veered to the southwest as soon as we were

\* Captain CARTERET flayed about a week at Massafafuero, a fmaller island, and near that of *Juan Fernandez*, having unexpectedly found the latter inhabited and fortified by the Spaniards. If we except the time he remained at Macassafar, repairing his ship, and refreshing his crew, which was upwards of five months, his longest stay was at New Britain, and the other islands to the east of New Guines. T.

out

out at fea. We were, in confequence, three days tacking about, in vain, before we could double the Cape. The 15th, however, the wind came round to the N.W. and we fteered to the fouth, and afterwards in an eafterly direction, in order to double the Cape of *Anguillas*, and to pafs the reef of the fame name. We found, however, that our fhip was very leaky, and we were obliged to keep the pumps almost continually a-going, especially when we carried any more fail than usual.

On the 20th, we faw a lunar rainbow. which was very clear and light, but had no diffinct colours. On the 24th, we met with a violent from from the s.w. which continued to the next day, with a tremendous highrunning fea; fo that we were obliged to lie by, as we made much water, and we could no longer ftem the force of the mountain-waves. The wind was accompanied by hail, and fome hailstones fell upon the ship, which were as ' large as a pigeon's egg. While lying by, the mizen-topfail, which was the only piece of canvas standing, in order to keep the fhip's head steady, was torn out of the braces:

braces; and we were obliged to fet a reeved mizenfail, though we were every moment afraid to fee the maft come by the board, as it was very unfound: yet it fortunately flood out the gale. At the fame time the water gained upon our leaks very faft, by the fevere ftraining of the veffel against the waves, fo that we were forced to pump almost inceffantly.

On the 25th, the weather became calmer, and the fea fmoother. We then again put before the wind, and purfued our voyage towards the eaft.

When the ftorm was over, we found that all our spare fails were foaked, and a great part of our bread spoiled by the seawater; the principal seams were likewise, almost every where, wrenched so far open, that in some places they would admit a man's hand: this, however, we repaired as well as we could.

On the 10th of January, 1769, we faw a great number of gulls, and in the evening feveral feals, fhearwaters, and black landbirds. Hence we concluded, that we were not far from the ifland *St. Paul*; though, according to our computation, it lay 80 leagues leagues farther. For two days we had not been able to observe the variation of the compass, on account of the cloudy weather. by which the fun was wholly obfcured. We however, at noon, observed our latitude, and found that it was exactly that of the abovenamed ifland. The fky was, in the afternoon and evening, very thick, by a continual rain; and having, therefore, for little light, I directed our course to be altered two points from the east, to E.S.E. in order to run down out of the latitude of the island, which proved the means of our prefervation; for at half past ten at night, we had a glimpfe of the land, clofe upon our fide, fo that it even feemed to hang over us; but having got to windward of the island, we were enabled to run off shore before the wind, in a foutherly direction, which we did, till we were at the diftance of two leagues from the island, and we then fet our course again towards the eaft.

This island, and that of *Amflerdam*, which lies fifteen leagues to the northward, are the only known islands in the fouthern Indian Ocean Ocean below the tropic of capricorn \*. They are not large, but pretty high, particularly St. Paul, which is visible, in a clear day, at the distance of nine or ten leagues.

The East-India Company fent two ships to these islands in the year 1726. They were uninhabited. There was fresh water on both, and on that of *St. Paul* a hot spring of mineral water. There was good anchoring-ground on the north fides of both, and the sea around them abounded in fish. I did not find that any vessels had visited them fince that time; they lie at 400 or 500 leagues distance from the continent +.

I directed little fail to be made during the

\* In the fublequent yoyages of M. DE KERGUELEN, M. M. MARIOT and CROZET, and Captain COOK, those navigators discovered other islands in this tract of the ocean, confishing in a large island, called Kerguelen's-land, in about 48° south latitude, and 64° 20' east longitude from Greenwich, and some small islands, in three different places, about the latitude of  $46\frac{1}{2}^{\circ}$  and  $47\frac{1}{2}^{\circ}$ , and longitudes  $37^{\circ}$ ,  $46\frac{1}{2}^{\circ}$ , and  $48\frac{1}{2}$  east from Greenwich. T.

† The most recent, as well as the most accurate, account of these islands, is to be found in Sir GEORGE STAUNTON'S Account of Lord MACARTNEY'S Embassy to China, whose squadron touched there. T.

night,

night, intending in the morning to fteer again for the ifland, in order to have a near view of it; but finding at funrife that, as the fky remained overcaft, and the heavy rain continued, there would be fome danger in doing this, for want of a fufficiently clear view, I defifted from the attempt, in order not to expose the fhip unneceffarily.

Shortly afterwards, about fix o'clock, there arofe a found just like the groaning of a man out of the fea, near the ship's fide. When I first heard it, I thought that fome one of the crew had been burt between the decks, and I fent the officer of the watch down to fee what was the matter. The men, however, who were on deck, told me that they had heard this noife arifing, as it were, from out of the water feveral times before; and I then perceived it to be as they faid; for going on the outfide of the mainchains, I plainly heard it ten or twelve times repeated. It feemed to recede proportionably as the fhip advanced, and leffening by degrees, died away at the stern. I fuppofe that it was perhaps occafioned by a fealion, that might be near the ship, as many of these animals were faid to have been

been feen on the island St. Paul, although we perceived nothing like any animal. About feven o'clock, the gunner, who came to make a report of fome matters of his department to me, informed me, that on one of his India voyages, he had met with the fame occurrence, and that a dreadful ftorm had fucceeded, which forced them to hand all their fails, and drive at the mercy of the winds and waves for four-and-twenty hours. When he told me this, there was not the least appearance of any florm; yet before four o'clock in the afternoon, we lay under our bare poles, fcudding before the wind, in a violent tempest. The sea ran so high on all fides, that at nine o'clock in the evening, all the cabin windows and hatches were ftove in, and the water rushed quite into the stateroom. To provide, however, as much as possible against this, we spread a fail over the ftern, on which the fea could break, and which proved of great fervice This blowing weather continued till to us. the next day, the 12th of January, when the violence of the florm abating a little, we were enabled to fet our fails again. Fortunately, no material damage was done to our mafts

masts or yards, but the bread and fail rooms were again very leaky.

At the fame time we faw a good deal of floating feaweed, which is generally met with to the eaftward of the iflands St. Paul and Amsterdam. The meeting with feaweed may ferve as an indication to navigators (befides the variation of the compass, which here decreases below 19°) that they have passed those islands, and are to the eastward of them.

On the 14th, having been kept back by ftorms and contrary winds, we again came in fight of the ifland St. Paul, bearing N.W. about eight or nine leagues off. The wind then coming round to the weft, we fteered a northeafterly courfe, and on the 27th of January we paffed the tropic of capricorn.

In 34° and 35° fouth latitude, we found our compasses quite unfettled, the needles varying four and five points backwards and forwards, although there was but little motion in the ship, and we were sailing but at a moderate rate.

In 30° fouth latitude, we met with the s.e. monfoon, or tradewind, with which we fteered N.N.E. in order to make the land to the

the weftward of the ftraits of Sunda, expecting to meet there with the wefterly winds.

On the laft day of the month, we had the fun vertically over us, and the higheft rife of the thermometer that day was to  $81^{\circ}$ , though on the following days it ftood at  $83^{\circ}$  or  $84^{\circ}$ .

In 11° fouth latitude, the s.E. tradewind left us, and changed to weft, with which, on the 12th of February, we ran in fight of the ifland *Engano*. We here found ourfelves  $10\frac{3}{4}$  leagues more to the eaft, than by the fhip's reckoning.

This island lies in  $5\frac{1}{4}$ ° fouth latitude, about 25 leagues E.S.E. from *Prince's Ifland*, in the ftraits of *Sunda*. Ships that pass the straits, in the westerly monson, generally run in fight of *Engano*. It is fix or seven leagues in length, and not quite half as broad. It is not high, and can only be difcerned at five leagues' distance. It always appears green, by the trees with which it is covered. We saw fome breakers on the west fide, but none any where else. There are no foundings round it, except on that fide, where, according to the Indian Pilot, there

1

there is an anchorage: fome fifhermen inhabit it, but they are very fly of ftrangers.

Immediately on coming in fight of this island, we were overtaken by a violent thunderstorm, which was followed by a continual calm for fome days, fo that we were not only prevented from advancing, but were driven by the currents, which fet ftrongly to the westward, more and more the contrary way; and on the 16th of February, we loft fight of Engano.

This calm weather still continued, and if we fometimes had a breeze, it came from the s.E. the very point towards which our courfe should have been directed Loitering here against our inclination, we discovered on the 21st, just before funset, a low and finall iflet, at fcarcely three leagues' diftance, which we found by our latitude to be the island Met het rif, or Reef Island; likewife called Droevig, or Difastrous Island, on account of thips having formerly been wrecked upon it, by reason of its smallness. It was fortunate for us, that we faw it before dark ; for we should otherwise have run much danger of falling upon it during the night, fince we could not think that the E

VOL. I.

the currents could have fet us fo far to the westward, which in five days, fince our last observation at the island *Engano*, we found to be full thirty leagues.

Having a foutheafterly breeze, we immediately ran ftraight off from the island, to the E.N.E. but at daybreak the next morning, we again found ourfelves close to it; fo that had it remained dark a little longer, we should have been in the greatest danger, by the strong currents which set towards it. We were therefore obliged, in order to avoid the difasters with which these continual calms and violent currents threatened us, to fall below it, out of our course, in order to have searoom enough.

This place is, as has already been mentioned, both very fmall and very low. At two leagues' diftance, it has the appearance of a grove of evergreens, of about half a league in length, floating upon the water. Its fouth latitude is  $3^{\circ} 45'$ , by my own obfervation. The Indian Pilot defcribes it as having two reefs, one at the fouth, and one at the north, ftretching out to fea, a league and a half: but failing round its north end, about a league from the fhore, and founding with with a line of 150 fathoms, we found no bottom; fo that, in this inftance, that book is not accurate; yet we faw breakers on the north fide, as we computed, about a quarter of a league from the fhore.

Our ill fortune was not yet at an end. We daily experienced calms, and contrary winds, together with heavy thunderftorms; and in these, the lightning was so inceffant, that the whole horizon appeared as if on fire. We had likewife violent gufts of wind, that feldom were above an hour in duration ; during which, however, it was impoffible to carry any fail; and when we fometimes attempted to make fome progrefs by them, our fails were either blown away, or we were in great danger of lofing our yards and masts. When these sudden squalls subfided, they were commonly fucceeded by dead calms, and the heat was then nearly intolerable, the thermometer being often at 88°, without the leaft refreshing breeze, to mitigate the fervency of the weather. All this, added to the heavy and violent rains, which fell every day, occasioned much ficknefs among the feamen; fome of whom, in a short time, paid the debt to nature. Among E 2

[ 5I ]

Among the dead, was my fecond lieutenant. I experienced myfelf the greateft torture, from a violent colic, for ten or twelve days, and the whole duty devolved thus on the firft lieutenant, who was obliged to be on deck both night and day, as neither of the two officers next in rank, were fit for ferving in the capacities they held, and were even hardly acquainted with the compafs.

It was not till the 15th of March, that we got fight of land. At eight o'clock, A.M. on that day, we difcovered the high land of Sumatra's welt coaft \*, and at noon made the Keizers Piek, or Pike of the Emperor, being a lofty, fpiry mountain fo called. Taking a good obfervation here, we found that the currents had driven us 60 leagues to the weftward, fince the 16th of February, though they otherwife, in this time of the year, moftly fet to the eaft.

On the 16th of March, at noon, we entered the firaits of Sunda, having the Flat

\* The part of Sumatra here meant, though, in fact, the foutheast end of the island, is denominated by the Dutch, as above, Sumatra's west coast, on account of its relative westerly situation, with respect to their chief settlements at the east end of Java. T.

point

point of Sumatra on the one hand, and Printes Island on the other. I shall speak more at large of both places, in the obfervations which I have already mentioned.

Towards the evening, we found ourfelves not far from the ifland Kraketau. The wind now gathering into a ftorm from the westward, and the rain rendering the fky very ' hazy, we refolved to lie by during the night, not having fufficient light to proceed. Making fail again at daybreak, we came at noon abreaft of the ifland Dwars in den Weg, or Middle Ifle. The guard flationed at Anjer, in behalf of the Company, came on board of us here, and I dispatched a letter by him, to the governor general at Batavia, and one to the commandant at Bantam, requefting to have fome refreshments fent on board for my people. About eleven o'clock at night, we anchored abreast of the point of Bantam, near the island Panjang.

We received, the next morning, the refreshments we had asked for: they confisted in an old buffalo, the slesh of which was so tough, that no boiling would soften it, some very indifferent vegetables, and forty souls.

E 3

For

For this fcanty provision, the East-India Company were charged one hundred gilders \*.

In the afternoon, the wind being wefterly, we weighed anchor, and at funfet, came to an anchor again, near the iflands called *De Wapens van Hoorn*, or *The Arms of Horn*; for it is very dangerous to fail in the nighttime along this coaft, becaufe of the fhoals and rocks, which are feattered all the way, under the furface of the fea.

At funrife, on the 19th of March, we again got under weigh, and paffing, a little after noon, the ifland Onruft, we caft anchor about four o'clock, P.M. in the road of Batavia. The admiral, or flagfhip, returned our falute, of thirteen guns, with five, and I immediately went on fhore, to wait upon the governor general, in order to inform him of my arrival, and give him an account of my voyage. His excellency, however, was at his country-feat, called Wel te Vreeden (Well-contented), and I accordingly went thither, to pay my refpects to him.

\* About nine pounds flering. T.

#### CHAPTER III.

Paffage from BATAVIA to BANTAM.—Situation of BANTAM.—Defcription of the city.—The Pafcébaan.—The Mosque.—The King's Palace, and Fort DIAMOND.—Religion.—Fort SPEELWYK. —Company's Officers.—Dependencies of the Commandery at BANTAM.—Pepper taken on board.— Weights.—Visit to some remarkable Places without the City.—Visit to the King of BANTAM.—Account of his Court, and our Entertainment there.—The King's Procession to the Mosque.—Cargo completed. Departure from BANTAM.—Anchorage at the Island ONRUST.

HAVING discharged the cargo of the ship, and taken in ballast, I received orders from the governor general, to go to *Bantam*, to take a cargo of pepper on board. My departure was fixed for the 10th of May, and I was likewise directed to hoist an ensign at the maintop, as soon as we were out of fight of the road of *Batavia*, because Mr. VAN TEST, senior merchant, and ex-commission of inland affairs, together with Mr. DE MEYER, counfeller of justice, and some

E 4

more

more company, both ladies and gentlemen, were on board, and were to go the voyage to *Bantam* with me; although this mark of diffinction was not properly due to any one of them, unlefs they had been on commission in behalf of the Company's government, which was not the cafe.

We accordingly failed on the appointed day, the 10th of May, having on board eight chefts of money, containing fifty thoufand Spanish dollars, which were to be given in payment for pepper, to the king of *Ban*tam.

At two o'clock, P.M. we anchored abreaft of the island Onrust, as the seabreeze began to blow pretty ftrong against us.

We failed again the next day, at daybreak, and in the evening, caft anchor abreaft of the ifland called *De Groote Combuis*, or the *Great Furnace*, whence we fet fail again, on the 12th, in the morning, and anchored at three o'clock, P.M. before the city of *Bantam*, clofe to a fmall ifland called *Het Hollandfcb Kerkbof*, or *the Dutch churchyard*.

We faluted the Eaft-India Company's commandery here, with thirteen guns, and had

had our falute returned, with the fame number. Before we reached the road, Mr. REINOUTS, the commandant at Bantam, came on board, to welcome the company who were with me; and they all went on fhore together, at four o'clock. I foon followed them, and Mr. REINOUTS very politely offered me the ufe of his houfe and table, while I remained at *Bantam*, which I thankfully accepted.

The gulph or bay of Bantam, bounded by the point of the fame name, and that of Pontang, forms a commodious retreat for ships, large numbers of which may anchor in it in fafety. Many fmall iflands lie fcattered up and down in it; and they afford an agreeable profpect to the fhips in the road. These islands are all uninhabited, except Pulo Panjang, or the Long Island, which is the largest, and on which some fishermen refide. There is a great plenty of fine fish here, among which the inhabitants of Bantam prefer one called the kaalkop, or baldhead, which has fome refemblance to cod. . It is at the bottom of the bay that the city of Bantam is fituated, full a quarter of an hour's

hour's walk from the feafide. It lies between two branches of a river, which deicends from the mountains. The diftance from *Batavia* is about thirteen Dutch miles\*, or leagues.

The communication between these two places by land, is very difficult, owing to the thick forests, and deep morasses, which lie between them. These obstacles render the road by land, nearly impracticable, at least for Europeans: for this reason, people go by water, making use of the land and sea winds, which seldom fail, and which drive the light Indian vessels or *proas*, called *flyers*, to and fro, along the coast, with supering celerity. I was told that they fometimes took up no more than four hours in the passage.

The river of *Bantam* is only about 170 or 180 feet over, at its mouth. It is likewife very fhallow, fo that at low water, a common fhip's boat does not lie afloat in it. It is befet with wooden piles, on both fides, as far as Fort *Speelwyk*; but they are kept in very indifferent repair, which is a pity; as they would

\* A Dutch mile, which they in general call an hour, is about three miles and a half English. T.

be

be of fervice, to prevent the fhifting of the fand. At high water, and in fpring tides, it is from five to feven feet deep, and fmall Indian veffels can then enter the river.

Though this is called the river of Bantam, it is properly only a branch of it. The river itself is divided above the town, into three channels, of which this is the middle one, the two others run into the fea, about a league and a half off, on each fide.

Bantam lies in an extensive plain, behind which there is a range of high and maffy mountains, that extend far to the fouthward. I cannot determine respecting its fize, not having had an opportunity of going round it : it must certainly, however, be called a large city, for I have often walked ftraight on for a whole hour, without reaching the end. I did not perceive any walls or fortifications toward the fea, nor any on the landfide, except Fort Diamond, in which the king's palace stands; notwithstanding feveral travellers talk much about them. You enter the town without perceiving it, and would rather fuppofe yourfelf to be in a grove of cocoanut-trees, than in a city. The houses, if huts of this nature

T

nature, wattled up with reeds or canes, plaiftered with clay, and covered with leaves or *attap* \*, may deferve that appellation, are fcattered to and fro, without any order or fymmetry of ftreets, and round each of them is a plantation of cocoanut-trees, the whole furrounded by a paling of fplit bamboo, by which every family is wholly feparated from its neighbours.

A quarter of a league from where the city begins, towards the mountains, is a large open field, called the *Pafcébaan*, where three roads (for fireets they cannot be called, having no refemblance to fuch), leading from different quarters of the town, unite to the weftward of the river. This forms the eaftern, as part of the city does the fouthern, boundary of the *Pafcébaan*, while the royal mosque is fituated on the north, and the king's palace on the weft fide of it. In the middle of this plain ftands a large weringa tree  $\dagger$ , which extends its fpreading branches on all fides, and affords a perpetual

† Casuarina equisetifolia.

and

<sup>\*</sup> This is the name given to the leaves of the palm-tree, used for covering of houses. T.

and agreeable fhade. At the foot of this tree, is a grave, covered with a large blue ftone, in which the body of one of the former kings of *Bantam* lies buried, and which the inhabitants look upon as a very holy place, and revere it greatly. A little farther off, on the other fide, is a building, which refts'upon potts, rifing ten or twelve feet out of the ground. The roof is fupported by an appearance of pillars. It is uted as a place of circumcifion, for the children of the king; and on fuch occafions, it is hung round, and richly decorated, with coftly tapeftry, and pieces of cloth.

The name of this field, the *Pafcébaan*, is that which is given throughout the eaft, to those places where their princes divert themselves, with horse-races and similar exercises. All their courtiers and great men must then appear on horseback, and in magnisticent apparel, to contend in the races with the king or his fons; always, however, with the proviso, that they yield the palm of victory to their royal competitors.

The molque or temple, mentioned above, ftands at the end of a little pleafant lawn: it is furrounded by a high wall, and is almost fquare. fquare. It has five roofs above each other, all decreafing in fize upwards, till the laft terminates in a point; the eaves of the loweft, jut out much beyond the walls of the temple. Clofe by, is a high, but flender, fpire, which ferves, like the *minarets* in Turkey, to announce the hours of prayer. Neither Chriftian nor Pagan may enter this temple, upon pain of death. Indeed there is little to be feen in it, as I was informed, more than a parcel of benches, and a fort of pulpit, in which the king fometimes performs the fervice as prieft; as I shall have occafion to notice hereafter.

The royal palace, which stands on the west fide of the *Pascébaan*, is built within a fortres, which is called the *Diamond*. This is an oblong square, eight hundred and forty feet in length, and nearly half as broad. It has regular bastions at the four corners, and several semicircular places of arms on the fides. I counted fixty-fix pieces of cannon in this fortification, the greatest part brass, and mostly heavy artillery, but old, and few of them serviceable. The touchholes of some were so worn away, that a small teacup could easily be passed through them.

them. There were feveral with the arms of Portugal, and a few with those of England: likewife five or fix brafs cannon. founded by the Javanefe. These last had two ftrong iron rings, round the chace, at the mouth, and two at the chambers, to fecure the piece from burfting. They appeared to me to be twelve-pounders. The four bastions point to the four middle points of the compais, N.E. s.E. s.W. and N.W. The walls are built of hard ftone, and are fourteen or fifteen feet in height. Every expence relative to the reparation and keeping in order of the fort, and of the artillery, must be defrayed by the king, by whole predeceffors it was erected in the latter part of the laff century.

The Dutch East-India Company keep a garrifon in it, confisting of one captain, three fubalterns, and one hundred and thirty privates. This force ferves nominally to defend the person of the king from all hostile attempts; but, in fact, to have him always in the Company's power. None of his fubjects, either high or low, not even his fons, are allowed to approach his person, without the knowledge of the captain of the Dutch Dutch military, who receives information respecting the king's visitors, from the guard at the gate, and transmits it, from time to time, to the commandant at Fort Speelwyk. No Javanese. or Bantammer is ever allowed to pass the night, within the walls of the fort.

A wet ditch runs round it, but this would be a trifling obstacle to the operations of an European enemy; for it is entirely neglected, and in many places almost dry. On a stone over the gate, is an infcription in Dutch, by which it appears that the fortrefs was built by one HENRY LOUWRENTS, a native of Steenwyk, in the province of Overysfel. This man Foaring the confequences of fome crime or other which he had committed, guitted the fervice of the Company, and entered into that of the king of Bantam, who finding he had fome knowledge of fortification, employed him in building this caftle, after he had abjured his religion, and embraced the Mahomedan faith. Fort Diamond is not difcernible until one is close to it, on account of the numerous cocoanut-trees with which the city abounds, and which impede the view; we must, however, except that fide of it.

it, that faces the *Pacébaan*, where it is open to the eye.

The approach to it, is over a drawbridge. that is thrown over the moat. Between this bridge and the gate of the fort, is a fpace of ground, or esplanade, on the right fide of which, stands a large building, with a square roof, open in front and at the fides, in which the ceremony of crowning the hereditary prince is performed. On the other fide are the king's stables and coachhouses, the former well provided with horses; the latter, which are only wooden sheds, contain feveral coaches, which have at different times been prefented to the king, by the Company, or their governors, and among which there are fome that are venerably old, and in a tafte truly antique. The king's gomgoms, a fort of mufical inftruments, of which I shall speak more at large in another place, are likewife kept in those fheds.

At the gate of the fort, an officer and four and twenty men, mount guard night and day. The palace is about twenty paces from the corps de garde, and is called Dal'm, which in the Malay language fignivol. 1.

#### F 66 T

fies. the inmost. This is not a fingle or regular building, but confifts of many dwellings united together, and covers nearly the whole fpace of ground within the fort. In the centre appears a square building, which has two roofs rifing above each other, to fuch a height, that it is visible three leagues off at fea. It is mostly built of brick, and covered with tiles, but there is no regularity obferved, with respect to its architecture, or fcite. The walls of the king's feraglio are raifed higher than those of the fort, to render it impervious to the eyes of the curious. The captain who commanded the garrifon here, related to me, that two inquifitive mortals were once difcovered, attempting to fcale thefe walls, and were inftantly put to death.

When the king's fons arrive at the age of puberty, they do not any longer refide with their father, but have each their feparate feraglio or harem. All the fervants of the palace are women, and even the attendant guards of the king are of the female fex; for, although, when he appears in public, he is accompanied by his Bantam lifeguards, yet they are never admitted within the

I

the gates of the fortrefs. Thefe, befides their ordinary fidearms, *criffes* or long daggers, are provided with pikes, the iron heads of which are very long and broad; and the king is likewife attended, when he goes abroad, by a guard of Europeans from the garrifon.

The religion of the kingdom of *Bantam* is the fame as prevails throughout Java, that of Mahomet.

In what relation this part of the island ftands, with respect to the Dutch East-India Company, will appear in another place.

Fort Speelwyk is a fortrefs, which the Company caufed to be built, during the civil wars, between Sultan AGON, king of Bantam, and his fon (in 1682); and it was called Speelwyk, in allufion to the name of the then governor general of India, CORNELIUS SPEELMAN. It is fituated on the eaft bank of the river, a very little way from its mouth. It is a fquare, defended at three of its angles by regular baftions, and at the fourth, by a demi-baftion. It is mounted with forty-eight pieces of cannon, of various calibers. The north, fouth, and weft fides are covered by a wet ditch, which is, how-

F 2

ever,

ever, neither broad nor deep; and which has a communication with the river that The walls are comwalkes the east fide. ftructed of a heavy and hard kind of stone. and are thirteen or fourteen feet in height, but in fome places they are beginning to decay. In the interior of the fort, there is an open square, planted with trees in the middle, the fides of which, are formed by feveral buildings, in which part of the Company's fervants refide. Amongst these, the house of the commandant is diftinguishable above the reft, having lately been handfomely rebuilt, and amply provided with roomy apartments; one of which ferves for a chapel. The other buildings confift in, barracks for the foldiery, warehouses, &c. The gate is very near the riverfide, over which there is a drawbridge, and opposite to it is a pretty long ftreet, in which the Company's fervants refide, for whom there is no room in the fort, together with a few Chinefe. The garrifon is nearly equal to that of Fort Diamond, but a confiderable number are generally confined by ficknefs; this place being confidered as even more unhealthy than Batavia.

The

The chief authority, in behalf of the Company, is here vested in a fenior merchant, with the title of commandant, who has likewife the management of the trade. which chiefly confifts in pepper, and fome cotton-yarn. This officer, however, is under the immediate controul of the local government at Batavia, whence he receives orders, and whither he fends reports, nearly every day; for Bantam is only looked upon as an outpost or dependency of Batavia: whereas other Commanderies, which are fituated at a greater diftance from the capital, are only fubject to the orders of the council of India. Yet the commandant here, has likewife a council, confifting of the administrator, or fecond in command, and fome of the fervants of the Company following next in rank. There is also a fifcal for the purpole of preventing the illicit or fmuggling trade. One BAYARD, who filled this office in the preceding year, had accufed the commandant of having himfelf engaged in thefe underhand dealings with the English; but the accuser died in good time, and the accufed was acquitted of the charge. The actual commandant, I. REINOUTS, F 3

J. REINOUTS, was a native of *Enkbuizen* in North Holland, and had enjoyed the appointment for fome years. I was told at *Batavia*, that he paid great attention to the Company's pepper-trade. Whenever he goes out in ftate, he is efforted by a guard, confifting of one non-commissioned officer and twelve privates. He is addreffed by the title of *acbtbaar beer*, or worfhipful fir, and his inferiors never approach him but with the deepeft respect.

To the Commandery of Bantam also belong the refidencies, or factories which the Company poffess, at Lampong Toulan Bauwang, and Lampong Samanca, both fituated in the fouthern part of the island Sumatra. These are fubordinate or conquered provinces of the kingdom of Bantam, and yield a confiderable quantity of pepper annually. The officers of the Company who refide there, are chiefly stationed, in order to keep a watchful eye upon the fpice, that it do not fall into any other hands than their own. They have both the rank of bookkeepers, and have each a few foldiers, and a non-commissioned officer with them. The refident at Toulan Bauwang, had been publicly

licly beheaded at Batavia two or three years before; he had caufed one of the grandees of the king of Bantam, and who was his deputy there, to be fhot dead in cold blood. The governor general did all that could be done to fave his life, but the remonstrances of the court of Bantam were fo ftrong and preffing, that at last he was obliged to be put to death. He underwent the punishment with the greatest fortitude and compofure.

There are two other outposts, which are likewife taken from the garrifon of Bantam, one at Anjer, or Aniar, and the other at Feritta, both places in that kingdom, but each confifts of no more than two men. They are chiefly fet, for the purpose of watching the fhips that arrive, of which they note down the names, and the places whence they come, and immediately give information of them, to the commandant at Bantam, who, in his turn, transmits it to the governor general at Batavia. This is done with respect to Dutch, as well as to foreign veffels.

The day after our arrival, the chefts of money were taken from on board, and carried

F 1

[ 72 ]

ried on shore; part of the ballast was difcharged, and every thing made ready to fhip the pepper. This was begun to be effected on the 15th of May, and on that day we took on board, about 70,000 pounds weight. The delivery of the pepper was made out of the king's warehouses, fituated near the river, after having been weighed by one of his fervants, by weights of 250 pounds each, in the prefence of eight or nine of his inghebées, or princes, who took an exact account of the whole ? a fervant of the Company deputed for that purpose, and one of my thip's officers, being likewife prefent, to prevent every kind of fraud. It was afterwards carried down the river, in flatbottomed boats, and put on board, while a guard was stationed in every boat, to prevent any pepper being ftolen; for the Bantammers are greatly addicted to this vice. Heavy goods are weighed here by bhars, each containing three picols, and these last are estimated at one hundred and twentyfive pounds.

While the loading of my fhip was going on, I now and then made an excursion inland, together with the Company from Batavia, tavia, to some passar, or market. In these, on certain days of the week, all kinds of goods, but more efpecially the country provisions, are exposed for fale. We likewife paid a vifit to a place, fituated about a Dutch mile and a half out of the city, which is called Grobbezak. It is an old and very ruinous four-cornered building, standing on a square piece of ground, of about ten or eleven acres, furrounded with water which is three hundred feet broad. A bridge formerly led to this little island, the remains of which were still to be seen in the water : but at prefent no one attempts to go over to it, for fear of the alligators or crocodiles, which inhabit the water. We, however, faw none of these animals. The natives believe, that no perfon could live in this building, on account of the evil fpirits which refide there. It is, in all probability, a relic of the Portuguese. Sitting on a little eminence opposite to it. there is an echo, which plainly repeats a word five or fix times.

Another day, we went to view the tomb of one of the principal faints of the Bantammers, This lay full two Dutch miles from the city, upon a hill, of about two hundred

hundred feet high. Hard by is a little village, called Bodjo Nogare. It is not far from the fea. into which the rivulet which runs close to it, discharges itself. There is a paffer or market, held here every Saturday, for provisions, cotton-yarn, capok \*, and other productions of the land. At the top of the hill which is called Vounong Santri, from the name of the faint. flands the tomb. which is made of brick, and is no more than twelve inches above the ground. At the head and feet, stand two cylindrical stones, of three feet in height, like small pillars, which the Javanese cover with a piece of white cotton cloth, in honour of their faint. The whole is furrounded by a kind of low white frome wall, raifed a little higher than the tomb. The natives pay extraordinary respect to this holy repository of the dead, and would not fuffer any one to

\* Capok, is the denomination given to the cotton, which incloses the feed, in the capfule of the filk-cotton-tree (bombax pentandrum), and is not used for fpinning, but for making matraffes, bolfters and pillows. The other cotton is the produce of a perennial flurub (goffpium berbaceum). Its seedvessels contain a very fine cotton, called capas, which is woven into an infinite number of cotton and callico pieces, of various degrees of finenes. T.

commit

commit an indecorous action, or ease nature, near it, without severe punishment. They are perfuaded, that even if any animal were to void its excrement upon the tomb, it would instantly drop down dead. Their legends relate, that this faint walked dryscaled over the sea, in the presence of a multitude of faithful musselmen, and could pass many days and nights, without taking any kind of nourishment. Close by the tomb there is a shady tree, round which a cubebsplant, which produces the long pepper, twines its luxuriant branches.

Shortly after our arrival at *Bantam*, Mr. VAN TETS, and the company that were with him, had alked leave to pay their refpects to the king, and the 17th of May was fixed upon, for that purpose.

Accordingly, on that day, three of the king's courtiers, magnificently arrayed in the Javanese fashion, came to fetch the company, at the head of whom was the commandant REINOUTS, while I likewise made part of it. The garrison of fort Speelwyk was under arms, and drawn out in two files, from the commandant's house to the gate, whither we had to walk between them.

### [ 76 ]

them. Having paffed the drawbridge of the fort, we found there in waiting, three of the king's coaches, with European coachmen, dreffed in his livery, which is yellow, with red flowers. The deputies from the court, defired the company to take their places, in the fecoaches. In the firft, were feated the ladies of the company; in the fecond, was the commandant REINOUTS, and Mr. VAN TETS, efforted by the ufual guard of the former, confifting in twelve grenadiers, and preceded by ten of the king's bodyguards; and in the third coach, followed the reft of the company.

We rode in this order, over the *Pafcébaan*, as far as the drawbridge of fort *Diamond*, where we left our equipages; and coming over the bridge, found part of the fultan's bodyguards, likewife ranged in two files, as far as the gate of the fort. They were armed with half-pikes, and were naked down to their middle, which was girded by a piece of dark blue or blackifh cotton cloth, which came round between their legs, and hung about half way down their thighs.

While we were passing between their ranks, the gomgoms, and other Indian musical instruments, inftruments, were played. Coming to the gate of the fort, we were met by the king, who took the commandant REINOUTS, and Mr. VAN TETS, by the hand, and led them in, while we flowly followed in proceffion. Within the gate, ftood the guard under arms, and the drums were beat inceffantly. There were befides two trumpeters flationed at the entrance of the palace, and dreffed in the king's livery, who founded a lufty peal of wind-mufic.

The entrance to the palace, is through an arched gateway; the plaistering of which was, in all likelihood, once of a white hue, but now appeared very black and dirty. It had, upon the whole, more the appearance of a prifon than of a regal palace, and gave me but a very indifferent idea of the infide. Paffing hence, we came into a large hall, which feemed, to the eye, to be about fiftyfive or fixty feet in length, and of about half that breadth, with a tolerably lofty cieling, built archwife, and feemingly wainfcoted. The walls were whitewashed, but looked very dirty, fo that it was eafily to be feen that little attention was paid to them. The floor was paved, diamondwife, with fquare

fquare red tiles. The light and air were let in, on the north fide, through three windows, and two large doors, opening towards the inner buildings of the court, which wore likewife not the most inviting appearance.

The door by which we entered, was at the lower end of the hall; at the other end, was another, leading to the remaining apartments. Near it ftood a couch, covered with yellow fatin; and alfo a kind of bedftead, with doors; the whole lacquered in the Chinefe fashion. A little lower, was an oblong fquare table, with a yellow cover, adorned with red flowers; and on it ftood three large chafed filver discus, with *firi* leaves, *areca* nut, and the further requisites for the preparation of *pinang*\*. Against the wall, were two fide-tables, with beautiful marble flabs; and between them, chairs

\* Pinang is the name of the kernel of the areca-nut (areca cathecu); but it feems likewife to mean, the mixture of the ingredients they use for massive on the firi leaves are betel leaves (piper betel). Into one of these leaves, a piece of the areca-nut, which is generally divided into fix parts, one of which ferves at a time, being put, with a little lime, the leaf is folded together, and kept in the mouth till all the firength is drawn out of it. The universality of the practice of chewing betel and areca, throughout the east, is well known. T.

of .

of walnut-tree wood, made in the European fashion.

At the lower end of the room, was a large mat of fplit rattans, fpread upon the floor. on which the king's courtiers, with the prince, or prime minister, who had the administration of the empire, at their head, fat down upon their heels, as foon as we had taken our places at the table. The king, having led the two abovementioned gentlemen into the room, placed himfelf upon a raifed chair, at the upper end of the table. Next to him, on the left hand, having his face turned towards the windows. fat the commandant REINOUTS, then Mr. VAN TETS, and the other gentlemen of the company. On the opposite fide of the table, on the right hand of the king, fat his first queen, the mother of the prince, heir apparent of the crown; next to her was Mrs. VAN TETS, then the fecond queen, then followed the lady fecond in rank of our company, then the third queen, then again one of our ladies, and the fourth queen, and next to her, the last on that fide, fat a little boy, the fon of Mr. VAN TETS.

The two first of these queens seemed to be

be already pretty far advanced in years, but the two others were younger, and, though fomewhat brown, looked very well; yet I remarked fome of the female flaves, who ferved us, who were incomparably handfomer and fairer than any of the four legal wives of the king. Their drefs too, had not any thing peculiarly graceful in it, confifting in long chintz kabays, or robes, of a fufficient fine quality it is true, but hanging loofe down to the feet, in the Indian fashion, as I shall hereafter more particularly describe.

Their hair, which was of a jetty black, was combed fmooth up over the head, and fastened behind with a wreath, which is here commonly called a *condé*, richly adorned likewise with gold and jewels. They fat on chairs, in the same manner as we do, although this is quite contrary to the general custom of the orientals, who every where are used to sit with their legs crossfed under them. These ladies were very talkative, and conversed much with ours in the Malay language, while the chewing of *betel* or *pinang* was not forgotten, either by the Indian fultanas, or the Dutch ladies.

The king, who was addressed by the title of

of Touang Sultan, or My Lord the King, appeared to me to be a man of between forty-five and fifty years of age. His colour was a cheftnut-brown, with a friendly countenance, which was not belied by his manners or behaviour. He had a little beard. and black hair, curling a little : he feemed more inclined to spareness than to corpulency. His drefs confifted in a long Moorifh coat, made of a certain stuff, interwoven with gold, which is manufactured at Surat, and is called foesjes. This hung down almost to his feet. The fleeves, which were loofe and wide above the elbow. fet clofe to the lower part of the arm, where they were fastened by a row of fmall gold buttons. Under this coat, he wore a white thirt, and a pair of drawers, that reached down to his heels, of the fame stuff as the coat. On his feet he had Turkish shoes drawn on flipfhod, the forepart of which was turned upwards; and white flockings on his legs. His head was covered by a round, and fomewhat sharp-pointed, cap, of a violet colour, laced with filver. Behind his chair ftood one of his female lifeguards, who was relieved from time to time, armed with a VOL. I. large G

large gold kris, in a fheath of maffy gold, which fhe continually kept raifed on high; and which the king, when he ftood up to conduct us out, took from her, and put under his arm. Two female flaves, one on each fide, were feated next to him on the ground. One of thefe, held his tobacco-box and his betel-box, both of which were made of gold, and of a pretty large fize. When he wanted either the one or the other, it was handed to him, wrapped up in a filk handkerchief. The other female attendant, had a golden fpitting-pot in her hand, which fhe handed from time to time to his majefty, as he ftood in need of this utenfil.

As foon as we were feated, pipes and tobacco were prefented to us; after which the commandant REINOUTS and Mr. VAN TETS entered into conversation with the king, on indifferent subjects, in the Malay language. Hereupon the king called the *pangorang*, or prince, prime minisser, who, as I have before mentioned, was sitting at the lower end of the hall, at the head of the nobles, to come to him. He accordingly crept along the floor, till he came near the king's chair, where he remained sitting on the the ground, answering the questions which the king put to him. He often replied with the word *ingbi*, which is the Javanese affirmative, yes; but as I understood little of the language which was spoken, I was neither edified nor entertained by the dialogue.

About half paft eleven o'clock, the cloth, which confifted in a white piece of cotton, was laid upon the table; and in a moment it was provided with a number of fmall difhes, filled with all kinds of Indian food, dreffed in various manners. The chief ingredients of most of them were, however, fifh and poultry, varied by numerous fauces, according to the cuftom of the country, of fugar, vinegar, or tamarinds. A fquare fcarlet woollen cloth, was laid upon the table before the king, and upon this, the diffes were placed which were defigned folely for , his use, and of which he ate heartily. With regard to myfelf, it was only with the greateft difficulty. I could fwallow a part of what was fet before me, which was fifh preferved in fugar, and which indeed I should not have touched at all, if politeness had not required that I should taste of something.

G 2

Mr.

Mr. REINOUTS had taken care to provide himfelf with a few bottles of wine and beer, which it would elfe, have been in vain, to have looked for, at the king's table, and we could therefore, now and then, indulge in a glafs of those liquors, during the dinner.

The king frequently broke wind upwards, during his meal, and his example was affiduoufly followed by all the gentlemen in company, which afforded matter of no little furprize to me. But I afterwards was informed, that this cuftom, fo contrary to European notions of decency, was an etiquette of the court of *Bantam*, and was affected, in order to fhew that one's appetite was good, and the victuals tafteful, which was very pleafing to the king.

After this course was taken away, three large dishes of confectionary and pastry were put upon the table; and these were more to my liking than what had preceded; but neither the king, nor his queens, seemed to care much about them.

In the mean time, fome large china bowls with boiled rice, and fome diffues of fifh, which came from our table, were fet before the nobles, who were at the end of

5

the

the hall, and who speedily emptied them. with continual eructations, which echoed through the hall; after which, they again fat down as before, upon their heels, each according to his rank. On their right hand. but separate from them, fat the second fon of the king, who feemed to be a youth of about seventeen or eighteen years of age, of a good countenance, but squinting a little. I was told, that he possessed a good judgment, and more understanding and abilities than the heir apparent. This prince had his victuals brought him, at the fame time with the nobles, but feparately; and he was attended by a female flave, who fat by him.

About two o'clock, we role from table, and took our leave of the king, who conducted us out, in the fame manner as he had led us in, as far as the gate of the fort, followed by the prince, his fon, who led the counfellor MEYER by the hand; the whole accompanied by the continued performance of mufic, by the gomgoms, trumpets, &c. Without the gate, the king took his leave, and returned to his palace, and we went over the esplanade, and the drawbridge, to the

## [ 86 ]

the fame coaches in which we had come, and which carried us back to Fort Speelwyk.

Two days afterwards, it was announced to us, that the king would ride that day in proceffion, dreffed in his pontifical robes, from the fort to the great temple, or molque, to perform the fervice of their religion. Curious to behold this ceremony, we rode, at noon, to Fort *Diamond*, and took our places, fo that we could fee his majefty, ftep into his coach.

About half past twelve, he came out of the palace, dreffed in a white facerdotal robe, which was large and wide, and was fastened round his waift by a girdle. On his head he wore a large white turban, and on his feet large flippers, embroidered with gold. His coach was drawn by only two horfes. As foon as he entered it, the hereditary prince and his brother, who were both dreffed in a fimilar manner to the king, put their shoulders under the axletree of the hind wheels, as if they were going to lift up the carriage, and remained in that posture, till his majesty rode on. A horse of state, richly caparifoned, was led by the hand

hand before the coach. Clofe behind it, followed the heir apparent, on foot, under a *fambreel*, or funfhade, of ftate, and behind him, were carried three other funfhades, under which no one went. Next came the prince, prime minister, but without a *fambreel*; and after him, followed the brother of the heir apparent, and the other grandees of the court, with a numerous retinue of flaves, carrying each fome utenfil of wrought gold, for the fervice of the king, as his tobaccobox, his betelbox, his fpittingpot, kriffes, &c. and during the whole time, their ufual music was not omitted; and the drum was beat inceffantly.

When the king's carriage came upon the drawbridge, a gun was fired from the fort, to give notice to the people, who were affembled in great numbers on the *Pafcébaan*, of the king's approach, who taking a turn over that field, rode on to the temple. His guards were flationed in two rows, reaching acrofs the plain to the temple, with their faces turned from the proceffion. In a little lefs than an hour, the king returned in the fame order, and with the fame ceremonies, only when he came near to the fort, his G 4 guards,

guards, part of whom were armed with firelocks, fired four volleys, which were anfwered by a gun from the fort. The king was received within the fort, by the Company's garrifon, with drums beating, and colours flying; and thus ended the proceffion.

I omitted before to mention, the reason why the heir apparent was not prefent. when we paid our vifit to the king. That prince was then gone out upon a party of pleafure, to the neighbouring islands, to take the diversion of fishing. We faw him enter the river the next day, with a retinue of twenty-eight fmall veffels, all decorated with flags and streamers. That wherein his women were, was covered all round, fo that nothing could be feen within it. All these veffels were crouded with people. The prince frequently made fuch excursions, as I was informed, but never without obtaining the previous permiffion of the king, his father.

ł

In the mean time, the fupply and fhipment of pepper, went on fo rapidly, that on the 28th of May, my fhip received the last of her cargo on board. This confisted of 3,010 bbars, or 1,128,840 pounds of black, and 8 bbars,

8 bbars, or 3,000 pounds of white, pepper. Every thing being ready, we weighed anchor on the 30th of May, about four o'clock in the morning, and fet fail, faluting Fort Speelwyk with thirteen guns, whence the fame number was returned, as the enfign was again hoifted from our top. The commandant REINOUTS remained on board till the next morning, when he took leave of the company.

Having wind and tide against us, we anchored at noon under *Pulo Baby*. We were joined here, by the Company's ships, *Ouderamstel*, *Ganzenboef*, *Cornelia Jacoba*, and *Ritthem*; the two sirst coming from the chamber \* Amsterdam, the third from Horn,

\* The administration of the Dutch East-India Company, is, in Holland, divided between fix boards, or chambers, having fession at different places, wiz. one at Amsterdam, which being the most considerable, is called the prefidial chamber; this is composed of twenty-four directors, of whom eighteen are chosen by the magistrates of Assterdam, four by the cities of Dort, Harlem, Leyden, and Gouda, and the two others by the provinces of Gelderland and Friesland; besides these, there are four of the chief proprietors, who, in certain cases, have settion with the directors: the chamber of Middleburgb is the fecond in rank; it has thirteen directors, twelve chosen by the cities of Zealand, and the thirteenth by the province of

### [ 9P ]

Horn, and the last from Delft. They had left Holland the 2d of October, of the preceding.

of Gelderland, and two of the chief proprietors have feffion with them; next, the chamber of Delft, has feven directors, fix nominated by the regency of the town, and the feventh by the province of Over-Y/lel: the chamber of Rotterdam. which is the fourth in rank, has eight directors, feven elected by that city, and the eighth by Dort : that of Horn, is composed of seven directors, fix belonging to Hern, and the feventh deputed from the city of Alkmaar, and one of the chief proprietors here, has equally a feat in the direction ; the chamber of Enkbuizen, which is the last in order, has likewife feven directors, fix nominated by the regency of the city, and the feventh by the body of nobility of the province of Holland; while also one of the chief proprietors has feffion with the directors. The places where these chambers affemble being all feaports, a certain number of ships is difpatched from each, the equipment of which, with the nomination of the captains and officers, are effected by these local assemblies, who likewife have the direction concerning the outward cargoes, determine of what they shall confist, and provide and ship them in course. But the supreme and general direction of all the affairs of the Company, is vefted in what is called the Affembly of Seventeen, which confifts of seventeen directors, deputed, eight from the chamber of Ansterdam, four from that of Middleburgb, one from each of the others, and one alternately by each of these four last. This affembly meets three times a year, and is held for fix following years at Amfterdam, and the two enfuing years at Middleburgh. In their first fitting, they deliberate respecting the fale of fpices, and the dividends to be made to the proprietors; in the fecond, refpecting the orders to be fent out to India, and the answers to be given to the dispatches received

ceding year. We received their falute of thirteen guns, and returned it with eleven.

We failed again the next day, but made very little progress.

On the 1st of June, we tacked, and failed again towards the east, anchoring in the evening, close to *Menscheneeters*, or *Cannibal* Island.

On the 2d, we proceeded on our voyage in the morning, and caft anchor in the evening, by the point of Ontong Java.

received thence; and in the third, they fix the autumn fales, and determine the number of fhips that fhall be fent out, the expedition of which muft then be effected by the respective chambers. This affembly of feventeen, appoints likewife the principal officers, who are at the head of the Company's affairs in India. There is likewife a council of ten directors, which meets from time to time at the *Hague*; but as it ferves merely as a council, and has no hand in the direction itself, otherwife, than in giving advice, and in being the medium through which the Company communicates with the States General, it is not neceffary to enlarge concerning it.

This was the form of administration of the Dutch East-India Company, before the late revolution in Holland; what alterations may be made in it, or whether the Company will continue in existence, is, in the present unfettled state of affairs in that country, impossible to fay: we only know that the Company's charter expired fome years ago; but being provisionally continued, upon the old footing, by the late government, the new one came last year to a resolution, that it should be continued, in the fame way, for one year longer. T. The

# [ 9± ]

The 3d, we were obliged to remain at anchor there, both wind and tide being against us.

On the 4th, we anchored at noon, by the ifland Schiedam, where Mr. VAN TETS and his company left the fhip, and went up to Batavia, in boats which had been fent thence to fetch him. We fired a parting falute of thirteen guns, and ftruck the enfign from the maintop. At five o'clock, P.M. we same to an anchor under the ifland Onrust, where the fhip was to be unloaded: the fame evening, I went up to Batavia, to inform the governor general of my return from Bantam, and learnt from his excellency, that my fhip was appointed to be fent to Bengal, thence to return again to Batavia.

### [ 93 ]

#### CHAPTER IV.

Appointment of a new Director in BENGAL.—Departure from BATAVIA for BENGAL.—A Comet observed.—View of ORIXA.—Pagodas.—Point PALMIRAS.—Banks before the Entrance of the GANGES.—View of the Island SAGOR.—IN-GELLEE.—Fine Tracts of Country.—Village called DOVER.—The Old GANGES.—Anchorage before FULTAH.

ON the 18th of July, Mr. B. V. T---was appointed by the council of India, to be director of the Company's trade in the kingdoms of Bengal, Babar, and Orixa, in the room of Mr. G. L. V-, who had given in his refignation of that office, in order to return to Europe ; which, however, he was directed to do, by way of Batavia, that he might render account to the council. of his administration. There were three other fhips going to Bengal, but Mr. F----- preferred to take his passage, on board of the Snoek, the one I commanded. Our departure was fixed for the 12th of August. which was full a month and a half earlier than

[ 94 ]

than I had expected ; my first destination having been, to have taken *Malacca* in my way, whither the ships do not fail, till the latter end of September.

In the mean time, the cargo had been landed, and the fhip had been repaired, at the ifland Onruft, whence fhe returned to the road of Batavia, in the beginning of August, to take in her loading, for the factory in Bengal.

On the 12th of August, accordingly, Mr. F—— left the castle at *Batavia*, at fix o'clock in the morning, accompanied by some of the members of the government as far as the waterside, where, with two gentlemen, deputed for that purpose, by the governor general, he embarked in a boat, which waited for him, and came on board about seven o'clock; the yards were manned in his honour, but no falute was fired. With him came his lady, and their little boy, with a number of flaves, both male and female. The crew of my ship consisted in seventyfour European failors, and thirty-one Moors or lascars.

We weighed anchor, about eight o'clock, and fet fail, fteering towards the island Onruft.

## [ 95 ]

ruft. We faluted the road with thirteen guns, which was returned by the admiral or flag-fhip with three. At nine o'clock, having paffed the fand of *Rbynland*, commonly called the *Commandant's Robe*, we hoifted the flag, at the maintop, which was the mark of diffinction granted to the director F— by the governor general, though only by fpecial favour; for in the quality of director, he might only bear a pendant at the mafthead. The governor general too, had directed me not to hoift the flag, before we had reached the above place.

It falling calm about ten o'clock, we were obliged to come to an anchor, and to lie still, till five P.M. when we again made fail, and at eight, anchored by the island Onruft.

The weather continuing unfavourable, we remained at anchor the next day, and took in fome leagers of fresh water that had been sent after us from *Batavia*. A thunderstorm had done much damage to the powder magazine here, three days before; the roof had been wholly carried away, and the building had been struck by the lightning;

I

[ 96 ]

ning; providentially there was no powder in it, at the time.

On the 14th of August, at sunrife, we weighed anchor, and set fail, with an easterly wind, directing our course between the point of Ontong Java, and the island Middleburgb, and asterwards between Menscheneeters, or Cannibal Island, and the Great Combuis, or Furnace, towards the point of Bantam. In the evening, about eight o'clock, we anchored abreast of the bay of Bantam, not daring to proceed farther, in this shoaly water, during the dark.

At four in the morning, the next day, we again got under fail, and came up to the island *Dwars in den Weg*, or *Middle Isle*, about noon, where the guard from the bay of *Anjer* came on board; of whom we bought fome turtles as a refreshment. The wind remaining favourable during the afternoon and night, we steered for the Island *Kraketau*, and then between *Prince*'s island, and the *Flat* point of *Sumatra*, out to fea.

At funrife, the next day, we could just fee Prince's Island; whence taking our last obfervation, we set our course, w.s.w. as far

as the eighth degree of fouth latitude, and thence fteered due weft, making much progrefs, with an uniformly fteady s.E. wind, blowing in frefh gales, till on the 26th of August, when our computed longitude was  $102\frac{1}{2}$  degrees east from *Teneriffe*, or full 250 leagues west from the straits of *Sunda*, and thence we failed N.W. and afterwards north as far as the line, which we passed on the 2d of September.

On the 30th of August, about half past four in the morning, we faw, in the eastern portion of the heavens, a comet, with a tail extended towards the w.s.w. of about eight or ten degrees in length, and refembling a feather in form. The comet appeared like a star of the second magnitude, but a little hazy. Its situation was between erion and taurus. Its distance, according to a rough observation of Venus, was 50° 39', and full 95° from the sun; its exact altitude above the horizon, was at that time 69°, and its longitude 62° 21'. We were, by the ship's reckoning, in 3° 52' fouth latitude, and about 100° east longitude.

On the 14th of September, at four o'clock in the morning, I found that fince the 30th VOL. I. H of of August, and thus in the space of fifteen days, the comet had approached the sun about 54°, making full 31 degrees per day. After that time, 1 did not see it again in the morning; for the sky was remarkably hazy, and beset with clouds at the time of its rise; and when afterwards the sky became clear, it was lost in the rays of the morning. In the beginning of November, we saw it again in the wess, but much paler than before; the tail too did not extend so far to the east, as it had done to the wess, and shortly afterwards it disappeared entirely.

It was on the fame 30th of August, that the east wind failed us, and blew in a westerly direction, between w.N.W. and w.S.W. with heavy squalls, at intervals, and thunder and lightning, till we had got two or three degrees to the north of the line, where we experienced more steady weather.

We met with many ripplings of currents hereabouts, and faw many of the birds, called cutwaters \*, and likewife pintados.

In 11° north latitude, we observed, at fun-

\* Rygchopfalia.

rife,

rife, a great change in the colour of the water, and immediately founded, but found no ground with a line of a hundred fathoms. In the evening, the fea refumed its natural colour.

The 5th of September, we were in the latitude of the ifland of *Ceylon*, which we left juft out of fight, to the weftward. At funfet, we even thought that we caught a glimpfe of the land, but we were not at all certain about it.

On the 12th, we again observed the sea to be discoloured, but still found no ground at a hundred and seventy-five fathoms. Many birds now flew near the ship, among which were some *pylflaarts*, or tropic-birds \*, with black wings, and a few land-birds ; and in the night we heard a great noise of birds. *Bemelipatnam*, on the coast of *Coromandel*, wasthen, according to our estimation, N.N.W. from us, at the distance of twenty-five leagues.

The next day, we steered due north, in order to fall in with the land, but met with nothing, except sea and rockweed, floating upon the water.

> \* Phaeton ethereus. H 2

On

# [ 100 ]

On the 14th, we steered for the land N.w. under a prefs of fail, and about feven o'clock. P.M. we discovered the coast of Orixa, being the land of Pondy. It appears at first with three hummocks, separated from each other. We had then no bottom, with a line of a hundred fathoms, and found no change of colour in the water; but in the afternoon, we founded in feventy fathoms, bluifh clay. In the evening, we were abreaft of the hill of Carepare, four or five leagues from the land, and found that fince our last observation, at Prince's Island, we had deviated, one and twenty leagues more to the east, than we computed by the ship's reckoning. The fhore is not high, but has fandhills at intervals, between which the land appears covered with trees. In paffing along the coaft, two large pagodas, or heathen temples, make their appearance. One of thefe is call the pagoda of Jagernate, and equals any temple of the Gentoos in all Indoftan.

These pagodas are said to contain immense riches, from the innumerable confluence of penitents and pilgrims, who repair thither from all parts, and deposit rich presents fents in them, each according to his abilities, in order to obtain remiffion of their fins. It is further related, that the *pagoda* of *Jagernate*, was built by a certain corfair of that name, who, having amaffed immenfe riches by his piratical excursions, erected this fanctuary, as a compensation to heaven for his misdeeds. The period, however, when this happened, seems to be now entirely forgotten. This temple appears from the fea like a losty, but obtuse, steeple, while the other, has some resemblance to a twomast vessel under fail.

We did not get much farther the next day, on account of its falling calm; and at funfet, we found ourfelves before the mouth of the river of *Mirzapour*, about two leagues from the fhore, which had a very pleafant appearance, being every where covered with trees. Our latitude at noon had been 19<sup>°</sup> 48' north.

The following day, in the afternoon, finding that the currents, fetting to the fouthward, drove us greatly back, we were obliged to come to an anchor, in feventeen fathoms, full two leagues off fhore. In the night, we hailed an English fnow, who told

<u>H</u> 3

us,

### [ 102 ]

us, they came from *Calcutta*, and were bound to the coaft of *Coromandel*.

We were obliged to remain here at anchor, till the 18th of that month, when the force of the current was much abated, and we again fet fail, but found ourfelves under the neceffity of working farther down, the westerly winds having changed, and beginning to blow from the eaft. We, however, were able to get to windward of Point Palmiras, in the night between the 19th and 20th, and at daybreak, coming in fight of the Dutch pilotboats, that were cruizing here to meet the fhips that were expected, we took a pilot on board. In the afternoon, we faw the high land of Ballafore, and anchored at funfet, before the outermost bank of the Ganges. Here we could not fee the land on any fide.

There are two banks, or fands, which lie to the weftward of the weftern mouth of the Ganges, or Houghy River, and which extend from the land, about eight or ten leagues out to fea. What is called the head, or the fouthernmost of them, commences with the depth of ten fathoms, but shoals fuddenly to four, and three and a half.

Ships

Ships failing into the river, are obliged to run straight across these banks, the foundings upon and between which, ferve for marks to the pilots, to find the buoys which lie in the channel, leading to the entrance of the river, by Ingellee. If in failing over a ship runs aground, she is in the greatest danger of being entirely loft. The ground is a hard fand, that acts with a ftrong fuction. These banks are, in consequence, never passed but at the very time of high water, and, for greater fecurity, a pilotboat always fails about half, or three quarters of a league ahead, founding, and making fignals of the depth; while, when the pilots are of opinion that the water will not rife high enough, they rather keep the fhips at anchor before the banks, till they can carry them over in perfect fafety.

On the 21ft of September, at half paft eight, P.M. the pilotboat having made the fignal that there was a fufficient depth of water upon the bank, we weighed anchor, and got under fail. Our fhip drew twenty feet, and we paffed the first bank in the depth of twenty-eight, and the fecond in H 4 twentytwenty-four feet water. At noon, being between the two banks, we were in north latitude 21° 19', and at four o'clock P.M. we came to an anchor in the channel, by the buoy of *Boero Baly*.

The next morning, about feven o'clock, we again made fail, steering N.N.E. Atten, we faw the ifland Sagor, which we left upon our right. This island is long and low. and is effeemed facred by the inhabitants of Bengal, who hold it in great veneration. Α little after noon, we passed the road of Ingellee, and we here began to fee land on both fides of the river, having hitherto, from the island Sagor, only had it on the right hand. The land is here, at the mouth of the river, very low, and on coming from fea, it is not visible farther off than three leagues. At three o'clock we paffed the Jennegat, which is the most dangerous part of the navigation; for if a ship have the missortune to ftrike upon one of the fhoals, that make the channel here fo narrow, it must be lost; as was the cafe two or three years ago, with the Company's ship, the Lady Petronella, of which only a part of the cargo was faved, and

and the hull of the fhip was in a fhort time entirely swallowed up, by the fuction of the quick-fand.

At funfet, we came to an anchor before the channel of *Cajoree*, where a finall veffel came alongfide of us, by which I fent up the Company's papers to *Hougly*.

The following day, being the 23d of September, we weighed anchor about nine o'clock P.M. and failed with the flood higher up the river, in fix, five, and four fathom The water was very thick and water. muddy, occasioned by the rapid course of the river, the afflux of which was now at the higheft. In the channel, the bottom was a foft mud, but the fhoals, which were numerous, were a hard fand. At noon, we paffed the Haze, or Hare Channel, which has both fufficient depth and breadth to be navigable by feathips. In 1768, the director V---- fent fome pilots, and other proper perfons, to furvey this passage, that, in cafe of need, the Company's fhips might be carried to fea, through the fame, inftead of through the Jennegat, and past Ingellee ; but coming to the end of the channel, that entered the arm of the Ganges, which runs by

by Dacca, they conceived that the farther progrefs to fea was not advifable to be attempted by the Company's fhips, by reafon of the many fandbanks, of which they had no certain knowledge; and the examination ended here. The greatest part of the goods which are conveyed from the lastmentioned city to Hougly, pass through this channel\*.

Having proceeded thus far, the water deepened to ten and eleven fathoms, but the bottom was nothing but mud.

Hitherto, the land which we had failed by, was an uninhabited wildernefs, abounding in tigers, and other wild beafts. The banks of the river were mostly covered with underwood; but beyond the *Hare* Channel, we began to fee a few houfes and hamlets of the Bengalefe inhabitants, fcattered along them.

Inland, we beheld large level fields, fome parts of which were cultivated; and between them were green paftures, which afforded a

• From its fituation in the map which accompanies this relation, the channel here mentioned would feem to be that, which, in the English maps, is called the *Baratulla*, or *Channel Creek*, though the circumftance of its entering the river which runs by *Dacca*, indicates that it must either be, or have a communication with, what we call the *Baliagot Paffage through the Weods*. T.

molt

[ 107 ]

most agreeable prospect as we failed by. The higher up the river we advanced, the finer the country became : at times, we faw herds of a hundred head of cattle grazing in the pastures.

At three o'clock in the afternoon, we paffed a village called *Dover*, where the Englifh have built fome warehoufes, and a factory. There is a good and fafe anchorage before it, which is much frequented by their fhips, feveral of which we found lying here: clofe to it, a channel, called the *Shrimp* Channel, which runs far round into the country, falls into the river. At funfet we were obliged, by the contrary wind and tide, to come to an anchor at *Buffalo* Point, juft below a place which the inhabitants call *Adam's-tomb*, and which is diftinguifhable by a delightful grove of fine trees.

The wind and tide prevented us from leaving this place, till the next day, about three o'clock in the afternoon, when we fet our fails, but did not keep them long bent, on account of a rifing thunder(torm, which was accompanied by a violent fquall, and which forced us to come to an anchor, two hours afterwards, a little below the Old Ganges,

Ganges, having, the whole of the night, much thunder and lightning.

The following day, at daybreak, we heaved the anchor, but could only loofen it, without bringing it home to the fhip; and, by the narrownefs of the channel, occafioned by the numerous fandbanks, as well as by the rapidity of the ftream, we were obliged to drive up with the flood, ftern foremoft, dragging our anchor along the bottom, and at feven o'clock we paffed the Old Ganges, as it is called by the pilots.

This river takes its rife fo far inland, that no one has, as yet, been up it, as far as its fource, as the pilots and other intelligent people informed me\*. The place where it unites with the true *Ganges*, is very unfafe for veffels going up or down the river, for there are dangerous fandbanks before it, and the tide runs, at floodtime, with a ftrong current into it, and ebbs equally violently

\* The whole course of the river Roopnarain, which is falfely called the Old Ganges, is accurately laid down in Major RENNELL'S Maps of Bengal; by the confultation of which, the paucity of geographical information, refpecting that country, in this work, may be amply fupplied. T.

5

out,

# [ 109 ]

out. Just before I left *Bengal*, the English were intending to erect a battery of heavy cannon, on the point made by the confluence of these rivers, in order to command the *Ganges*, and to be able to prevent any vessels from coming up it. It is certain, that along the whole course of the river, a more suitable spot for this purpose, could not be hit upon, for ships passing it, have enough to do to work their fails, to avoid striking upon the fands, or being drawn into the *Old Ganges*, and are thus wholly unable to defend themfelves from any attack.

When we had paffed this place, we came in fight of our Company's fhips lying at anchor before *Fultab*, who, as foon as they faw the enfign flying from our top, faluted us with feventeen guns, which we returned with fifteen. About half paft eight o'clock, when the flood was fpent, we came to an anchor by the *Lime* Channel. Shortly afterwards, the equipagie meefler (comptroller of equipment) of Hougly, came on board, to welcome the director F—; this gentleman informed us, that an Englifh Eaft-India Company's fhip had, eight days ago, been wrecked upon the feabanks, at the mouth of the the river; her cargo, to the value of thirteen tons of gold \*, was entirely loft, and only forty of the crew faved.

The enfuing day, being the 26th of September, we again got under fail, at funrife, and anchored at nine o'clock, before Fultab. in fix fathoms water; we found lying here. the Company's ships, the Cornelia Hillegonda, Captain I. S. HOEVE; the Land's-welfare, Captain S. BOTH; and the Ritthem, Captain A. VAN DER WEYDE: the first from Europe, and the two last from Batavia. The two first faluted us with nineteen, and the last with fifteen guns, and we returned a falute of nineteen. At eleven o'clock, a deputation from the Council of Houghy came on board, to congratulate the director F----- on his arrival, and to conduct him to Hougly, bringing with them the Company's great budgerow, or yacht, in which the director was to proceed up the river .--- I shall be more explicit, respecting these vessels, in my observations on Bengal.

This deputation confifted of three of the members of the council, two of whom were

\* A ton of gold is 100,000 gilders; thus, at f.11.—per pound sterling, thirteen tons of gold are nearly 120,0001. T. accompanied accompanied by their ladies. They dined on board, and ftayed till four o'clock in the afternoon, when they embarked with Mr. F—, his lady, and child, in the great budgerow, and departed with the flood up to Hougly. At the fame time,' a falute of oneand-twenty guns was fired from my fhip, and the flag was ftruck from the maintop, followed by nineteen, feventeen, and fifteen guns from the other fhips, which concluded the ceremony.

#### CHAPTER V.

Peffage up to CHINSURAH — Siege of that Place by the Nabob.—Caufes of this Mifunderstanding.— The Siege raifed.—Fine Prospects along the GANGES.—Bengal Conjurers and Balancers.— FULFAH.—Excursion up the River.—Manner of making Sugar.—Meeting with a Faquir, or Saint. —Burning of three Bodies of Bengalese.—Account of some ancient Buildings.—National Visit to the French.—To the English.—Instalment of Mr. F.— in the Directorship.—Great Famine at PATNA.—Departure from CHINSURAH.—From INGELLEE.—View of the Island SUMATRA.— Currents.—Violent Squalls.—Calms.—Anchorage before BATAVIA.

THE following day, in the forenoon, when Mr. F— approached the English fettlement of *Calcutta*, he was faluted by nineteen guns from Fort *William*, and received the compliments of two gentlemen of the council of *Calcutta*, who were deputed from the English governor *Verelst*, in whose name, likewife, he was invited to dine at the fettlement: Mr. F—, however, excused himsfelf, on account of the indisposition of his

his lady. Mr. VERELST had gone on purpose to his country seat, about two hour's walk from *Calcutta*, in order to receive Mr. F—— on his arrival, as soon as he understood that his *budgerow*, was coming up the river. When he had passed *Calcutta*, Mr. F—— was again faluted from Fort *William*, with nineteen guns.

On the next day, on paffing the French factory at *Chandernagore*, Mr. F—— was likewife faluted with nineteen guns; but, inftead of deputing two members of the council to wait upon him, as the English had done, the French governor only fent a *chubdar*, or filver staff-bearer, to welcome him on his behalf.

Halfway between Chandernagore and Hougly, or Chinfurab, Mr. F—— was met by the director in office, who came to congratulate him on his arrival, with feveral budgerows; and they went up to Chinfurak together. Landing at Fort Guffavus, he was faluted with twenty-one guns, from the battery at the waterfide, and received by the other members of the council of Houghy at the ftairs, being then carried in ftate, in palankeens, through the great gate of the vol. I. I fort fort, commonly called the *Lodge*, to before the director's houfe, while the garrifon was drawn up in two ranks, with drums beating and colours flying; and the ceremony was concluded in the evening, with an elegant fupper and ball.

There being an order of the Hougly council, that all captains should remain on board their ships, as long as the springtides continued, which commenced at the time of my arrival at Fultab, I could not accompany Mr. F---- on his journey up the river; the above particulars are, therefore, fuch as I had occasion to learn from others. This order to the commanders of fhips, has its relation only to those springtides, which take place from the latter end of September to the beginning of November, becaufe it is during that period that the monfoon generally breaks up; and there is great danger at that time, especially with springtides, as the stream then runs with the utmost rapidity, and the thunderstorms rage with the greatest violence.

On the 3d of October, the Company's ship, the Valiant, Captain WAGENDONK, arrived at Fultab, which ship left Batavia ten days before mine.

That

That day, being the laft of the fpringtide, I embarked at night, on board a budgerow, for Cbinfurab, and arrived the next morning at the village of Bernagore; this is a place belonging to the Dutch Eaft-India Company, which is fituated halfway between Cbinfurab and Fultab. In the evening I left Bernagore, and arrived about nine o'clock in the morning at Chinfurab. Of these places I shall speak more at large in my observations.

The fame morning, the nabob of *Caffim*bazar, or viceroy of *Bengal*, had invefted the place, on the landfide, with a force of ten or twelve thoufand Moors, and all the approaches and barriers were fo clofely guarded, that no one could go in or out.

This occafioned, in the enfuing days, fuch a fcarcity of provisions, among the inhabitants of the village, that many of them perifhed for want. Mothers, driven by hunger, and

By firong neceffity's fupreme command,

brought their children to the dwellings of the Europeans, and entreated leave to fell thefe innocents to flavery, for a fmall portion of rice, in order to prolong their own I 2 wretched wretched life a little longer. To enereale the milery, the flock of provisions in the place, was found to be little or none. Befides this blockade on the landfide, the Moors had also befet the river, above the village, fo that nothing could be brought down by water; and from below, there was little to be obtained. While there was any rice, feven pounds weight were fold for a supee, but it was foon confumed. A perfon who, from the outfide, had contrived to throw fome poultry over the barriers, in the hopes of gain, being caught by the Moors, had his nofe and ears inftantly cut off.

The caufe of this unhappy affair was as follows:—The Company were bound to pay certain duties to the nabob, for the goods which were conveyed up and down the *Ganges*; but the money had not been paid by the director V—— for a confiderable time. The nabob, who infifted upon having them difcharged, as they were in fact his lawful due, iffued orders to the *fau/dar* of *Hougly*, of whom we fhall take further notice hereafter, to claim the payment in the most forcible manner. This officer accordingly dispatched a *chubdar* to the director

rector V ......, to require the money of him, threatening withal, that in cafe it were not paid, he would not fuffer any more goods belonging to the Dutch to pass. The director took umbrage at this peremptory meffage, and after having violently abused the poor chubdar, fent him to the fifcal DE SAUMAISE, and had him bound to the whippingpoft, and unmercifully flogged.

In confequence of this, the fauldar cauled all the goods belonging to the Dutch factory, which came down the Ganges, to be detained, and Chin/urab to be invefted.

The goods thus feized by the Moors, confifted in callicoes and other piece-goods, intended for the cargoes of the ships which were to fail for Europe in the beginning of November. These vessels were detained by this occurrence, and could not now be ready in time. They were obliged to stay in the Ganges till the latter end of January, and were at last forced to put to fea in an unfavourable season. Ought not the misfortunes which thefe fhips (two of which, the Enkbuizen and the Valiant, were loft with all their crews; and the third, the Land's-welfare, was faved with difficulty) 1 3 met met with, from the bad weather they had to encounter in the fouthern latitudes, to be attributed to these circumstances, and to the bad management of Mr. V—? But to return to the siege of *Chinfurab*.

As foon as intelligence was received of the detention of these goods, the director V----- thought fit to order a detachment of thirty men, under the command of an officer, to go up the river in boats, to where the goods were lying, in order to effect their release by force; but upon learning that a body of four hundred heabis (feapoys), or Moorish foldiers, were posted to defend them against our attack, the expedition was laid aside. Hereupon the director V----- affembled the council, and informed the members of what he had lately done; faying at the fame time, that matters being now brought to this point, he neither dared nor could proceed farther, without the approbation of the council. Some of the members replied, that fince he had proceeded fo far, without their knowledge or approbation, he might go on as he had begun, without their affiftance; but the majority were of opinion, that the matter ought

to

to beendeavoured to be compromised, through the mediation of the English. A deputation was appointed for this purpose, confisting of the head administrator, Ross, and the comptroller of equipment, VAN BRAAM, both members of the council; who so far arranged matters at *Calcutta*, with the English council, and the little nabob, or minister, MAHOMED REZA CHAN, who governed as guardian of the great nabob, who was a minor \*, that, upon a promise that the duties which remained unpaid, should be immediately discharged, the goods were released, and the blockade of *Chinfurab* was raifed.

But instead of this promise being fulfilled by the director V——, these arrears were still due, when, in the month of March the next year, he took his departure from Bengal; and the cargo of opium and other goods, intended for my ship, would equally have been seized, had not the director F- taken upon himself to be personally responsible for this debt.

\* MEER KANEYAH, otherwife SEYF AL DOWLAH, fecond fon of the well-known MEER JAFFIER ALLY CHAN, a youth of fixteen years of age. T.

This

• This laftmentioned gentleman was fo much blinded by the first, and was so easily impressed with whatever ideas the other thought proper to instil into him, that, however much he was warned by confidential and intelligent people of the evil effects which would result from his compliant partiality, he continued to follow the inclinations of the director in every thing. He was even guilty of the additional imprudence, of confiding to him whatever had been faid to him on the subject; and he did not perceive the bad consequences of all this, till it was too late, and after the director V---- had taken his leave of the Ganges.

On the 15th of October, the Moors departed from *Chinfurab*, and the navigation of the river upwards, was again opened.

On the 10th, the feftival of the Ganges had been held all along its banks, by the Bengalefe, or Gentoos, after fome preliminary folemnities of three days; on which occasion, an incredible number of people came from the inland parts, to be present at the festival. I shall likewife notice it in my observations on Bengal, already referred to.

On

On the 12th of October, I went from *Chinfurab* down to my fhip, lying at *Fultab*. Going down, I landed at *Serampore*, where the Danes have a factory; this is the moft inconfiderable European establishment on the *Ganges*, confisting only, befides the village occupied by the natives, in a few houses inhabited by Europeans. Their trade is of very little importance.

The profpects of the country, along the banks, and on both fides of the Ganges, in going up or down the river to Fultab. are delightful; but they are all furpaffed by that which offers upon passing along the French fettlement at Chandernagore, upwards towards Chinfurab, Hougly, and Bandel; which lastmentioned place is just feen in the background: then the eye glances upon the buildings of Chinfurab, the church, the garden called Welgelegen (well-fituated), with three stone terraces, raifed one above the other, and where every thing that is of ftone is whitened. Groves of ever-verdant trees appear behind, and, between these, buildings. In their front, the river, covered with fmall veffels and boats. A little lower, on the right hand, Chandernagore, which is built all

all along the river, and is embellished with many handfome houses. Before it, the ships at anchor, and moored with cables to the shore. On the left hand, fertile fields, and extensive meadows, affording pasture to numerous herds of cattle, and interspected with pleasant groves and coppices. The whole forming a most interesting landscape.

Farther down, about halfway between Chandernagore and Serampore, is a place called Garetti. Here, on the fame fide with Chandernagore, the French governor has built a noble houfe, or rather a palace, and has laid out an extensive and pleasant garden. And in this neighbourhood, the English have a military post, where often one thousand men, and fometimes more, are encamped.

The whole of this country is flat, just as in our provinces. It is interfected and fertilized by numerous channels, creeks, and rivulets. *Bengal* is justly esteemed the most fruitful part of Afia.

Approaching *Calcutta*, many gardens, newly laid out by the Englifh, make their appearance, which have handfome dwellinghoufes, with an agreeable profpect towards the

the river. *Calcutta*, which is built on the left fide in going down, about three quarters of an hour's walk along the banks of the river, makes likewife a very pleafing appearance. Before it, the fhips lie at anchor, just as before *Chandernagore*, in great numbers. There are almost every day veffels which go to, and come from, every part of India, in motion here; which greatly enlivens the fcene.

A little below *Calcutta*, ftands a ftrong fortrefs, called Fort *William*, which, built upon the banks of the river, commands it entirely. From this place to *Fultab* there are many Bengal villages interfperfed, fome of which are very large.

On the 13th of October, I reached my fhip, lying in *Fultab* road, and ftayed fome time on board. I occafionally went on fhore in the evening, when the heat of the day was over, to take a walk; and often amufed myfelf with feeing the tricks of the conjurers, and ferpent-charmers. The former far furpafs, in my opinion, those of Europe. There were hkewife balancers, who had a bamboo pole of twenty or twenty-five feet in length, perpendicularly refting on their girdle, girdle, without touching it with their hands. A young girl of feven or eight years old, laying hold of it, clambered up to the top, where fhe laid herfelf on her belly, and throwing her arms and legs loofe, feemed to fwim in the air; while the man kept running backwards and forwards, with the pole, always without touching it with his hands. In about feven minutes, the girl clambered down again, and performed a number of other tricks. But on this fubject more hereafter.

Fultab is a pretty large village, fituated on the left bank of the Ganges, going down the river. The fifcal of Chinfurab keeps one of his officers here, to have an eye upon the illicit or fmuggling trade, that is, in fuch cafes, when matters have not been fettled betimes with the fifcal, and a proper confideration made for his connivance.

The anchorage here is fafe enough, when the breaking-up of the monfoons is not accompanied with violent hurricanes, for then it is very dangerous; which is, indeed, the cafe all up the *Ganges*. Ships lie here likewife protected from the fwell of the fea, which fometimes, when the tide rifes, is elevated

elevated to fix and more feet in height, and rolls in with great violence, tearing the fhips which it overtakes, from their anchorage, or breaking their cables, and dafhing them against the fhore, or the fandbanks. This fwell never runs along the Fultah fide, but only along the opposite fhore. The bottom is a tough clay, in which the anchors often hold fo fast, that they cannot fometimes be weighed, and the cables break in the attempt. When it happens, however, that the Company's ships lie a whole year in the river, they are then carried up to *Cbinfurab* for some months, as was done in the year 1768, with respect to the *Valiant*.

On the 17th, the Company's fhip Enkbuizen, arrived in Fultab road. She had left Batavia before me, but had touched at the Coaft of Coromandel. Her Captain I. F. STOUT, had died on the paffage. This fhip was intended to be difpatched to Europe.

On the 18th, I received a letter from the director F\_\_\_\_, informing me, that my fhip was appointed to fail to *Batavia*, by way of *Coromandel*, and that I was to fail in the latter end of December.

The

[ 126 ]

The next day I again left the fhip for *Chinfurah*, which I reached the fame evening.

On the 20th of October, a Bengalefe woman was buried, with her deceafed hufband, alive, and on the 25th of November, another was burnt with the body of her hufband; but of both thefe barbarous rites, I shall give the details in my beforementioned observations.

The ship, the Snoek, which I had hitherto commanded, being now judged too old, to attempt the passage to Europe, I exchanged, with the confent of the director and council, for that of Captain HOEVE, the Cornelia Hillegonda. This gentleman took the command of the Enkbuizen, by which I had at first intended to have gone, but being advised to the contrary, in order that I might take another trip to Batavia, whither the Cornelia Hillegonda was bound, I chose this last. My first lieutenant A. VAN Es, was promoted to the command of the Snoek; and the several changes took place on the 17th of November.

On the 3d of December, we dropped down from *Fultab* to *Ingellee*, at the mouth

Digitized by Google

\*

of the river, together with the Enkbuizen, the Valiant, the Land's-welfare, and the Snoek, which last failed on the 29th of December, for the coast of Coromandel.

There being very little of importance for me to do at prefent, in the Company's fervice, I employed my leifure-time, in making fome little excursions inland, or to the Engliss and French factories. I likewise went a-hunting of foxes, jackals, and other wild animals, plenty of which are to be met with a little way inland; but the Bengalese do not like to see this, for it is contrary to the precepts of their religion to kill any thing which has life. Their objections, however, have no weight, as they never can muster fufficient courage to oppose an European.

On the 5th of January, 1770, the English governor VERELST, leaving the presidency, passed *Fultab*, where two of our ships were lying at anchor, without receiving any falute from either of them, which was always cuftomary. This afforded matter of great furprize to Mr. VERELST, as he had done all honour to Mr. F----, when this last passed *Calcutta*, as we have before seen. He sent one of his servants on board of the ships, to inquire - inquire of the commanding officers, whether they had not received directions from the director V-----, or the council of Houghy to fire the accustomed falute ? which they anfwered in the negative. The English government, complained in ftrong exprefiions of this behaviour: but were answered on the part of the director V----, that this was in retaliation of a fimilar affront, which he had received from Mr. VERELST on a national vifit to Calcutta.

On the 14th of January, my mooring cable broke loofe, but by the vigilance of my first lieutenant, we met with no damage. In the following night, however, the ship Ritthem met with the fame accident, and ran aground on a fandbank. Being fully loaden, the cargo was obliged to be unshipped, and she was not got afloat again in a fortnight; yet she did not suffer considerable damage.

On the 29th and 30th, the Enkbuizen, the Valiant, and the Land's-welfare, failed from the road of Ingellee, for Europe.

On the 31st, my ship, and the Rittbern, left Fultab, and proceeded to Ingellee, there to remain till the time of failing. The reafon fon why fhips do not tarry at *Fultab* fo long, is only becaufe the water of the *Ganges* becomes too fhallow in this feafon, fo that the *Jenegat* is dangerous to be passed. These vessels came to an anchor in *Ingellee* road, on the 7th of February, under command of the two first lieutenants.

In the mean time, I took another journey up the *Ganges*, and inland, in company with two of my friends, to view the country, and purfue the diversion of hunting.

On the 27th of January, we left *Chinfurab*, in a *budgerow*, at three o'clock in the afternoon, going up the river with the tide, and before the wind; and about half paft four we came to the Channel of *Niafferai*, where we went on fhore, and up the country. Here we met with pleafant plains of arable and pafture land, intermixed with groves of cocoanut, furi, mango, and other trees. The fugarcane was likewife cultivated in many places, and flourished luxuriantly.

We likewise observed, the manner in which the inhabitants make their sugar, which is very simple, the whole process going on in the open air, without much trouble.

ĸ

VOL. I.

They

Digitized by Google

## [ 130 ]

They bruife the cane, between two chamfered rollers of hard wood, two and a half feet long, and of about fix inches in diameter. These lie horizontally, one above the other, in two refts. fo fixed, that the rollers cannot be moved, out of their relative polition to each other, and leaving a space of a quarter of an inch between them. Each roller has four spokes, or handles, at the end, by which they are turned in oppofite directions, by two men. The fugarcane being put between the rollers, is thus bruifed, or flattened, to the thickness of a quarter of an inch, and its fap is preffed out, and received in a large carthen pot, placed for that purpole, under this fimple machinery. About eight or ten feet off, are eight other pots, fixed in holes, into which they fit exactly, and which are made in the earth in a longitudinal direction. The dried canes, from which the fap has been expressed, are used as fuel under these pots, into which the fap is put, and boiled into fugar.

The country hereabouts, abounds in jackals and wild dogs, fome of which we fhot.

At night we went up higher, with the tide, and came at five o'clock in the morning

ing, to the channel of *Chogdab*, which lies on the right fide of the river in going up (that of *Niafferai* is on the left), about eight or ten Dutch miles above *Chinfurab*. The village, which gives its name to the channel, ftands a little inland. There is a great weekly market, or *bazar*, as it is called by the Bengalese, held here, where all kinds of provisions, and other goods, the produce of the country, are exposed to fale. The channel terminates about three Dutch miles inland.

On its left fide, and upwards, the whole is flat land, without any trees; but on the right hand downwards, are many woods, in which there are tigers and other wild beafts.

We croffed a number of fields, without feeing any thing like a tiger; but on entering the woods a little way, we foon met with their traces in plenty, and we did not therefore think it prudent to venture farther in; for this animal feldom fhews itfelf, before it can fpring upon its prey, and when once within the reach of its claws, nothing can fave a man's life. We likewife met in the way, the remains of a Bengalefe, who had been torn in pieces by the K 2 beafts beafts of prey. For the reft, the hunting of jackals and wild dogs was not unpleafant.

In the afternoon, we failed higher up the *Ganges*, to a place called *Gouptipara*, which is about fix or eight Dutch miles above *Chogdab*. In our way, we paffed a pretty large ifland, lying in the middle of the river, but which produced nothing but a little tall grafs, and fome reeds.

We found here that the flood only lasted three hours, while the ebb continued nine. About four or five Dutch miles higher, as the Bengalese, and others who had been at *Cassimbazar*, informed us, there was no flood, except a little in spring-tides.

It was late in the evening before we arrived at Gouptipara. At daybreak, the next morning, we went on fhore, and found, about a quarter of an hour's walk from the river, a little village. Somewhat higher there was a wood of lofty trees, with much underwood, in which there was a great number of monkeys, and the wood was therefore named the monkey-wood. Thefe animals were about the fize of a fpaniel, with long tails, which, when they ran, they turned upwards. The body was covered with

with hair, of a grey colour, and the fore part of the head was black. As foon as we had fired one shot, they all ran up the high trees, and fome of them threw their young ones, which they held between their fore paws, into the bushes below : and whatever pains we bestowed in looking for them, we could not find them. The large ones fprang with an inconceivable quickness, from branch to branch, and from tree to tree. We shot some of them, and when the others faw these fall, they set up a most horrid cry.

The Bengalese were much displeased at this, and defired us not to kill any more of these animals; for their superstitious belief in the transmigration of souls after death, makes them think that these creatures. in particular, are the receptacles of human fouls

Somewhat farther inland, we met with the ruins of a stonebuilding, in which a faquir, or faint, had taken up his abode. He fat by a flow fire, in the middle of the ashes, entirely naked. His hair was black, and very long, tangled and clodded with ashes and dirt, with which it was strewed. He

He had imposed a fingular penance upon himfelf, confifting in a brafs ring, about the thickness of a quill, and three inches in diameter, which was passed through the substance of the glans of the penis, though in fuch a manner, that the urethra remained While we were with him. a Benunhurt. gal woman, in the fuperstitious hope of thereby becoming fruitful, came to kifs this difgusting mortal, on the part which was fupposed to posses the prolific virtue required. We put many questions to him, on the fubject of what we faw, but decency forbids the recital of his answers. Befides this ring, there were three other riveted ironrings linked to it, which altogether, might weigh, as we gueffed, about two pounds and a half. When he walked, he let the whole hang loofe, without feeming to be in the leaft incommoded.

Those who torture themselves in this extraordinary manner, are held in great veneration by the vulgar. Many of these faquirs wander about the country, and never need to be folicitous about their maintenance; for the superstition of the people, makes them even think it a great happines to be allowed to to give these fanctified beggars, who torture their bodies so unmercifully, for the love of religion, every thing necessary to their subsistance. I refer the reader, for a more ample account of this, to my observations on Bengal.

In the afternoon, we returned from the woods, on board of our *budgerow*, and went again down the *Ganges*. Here we found its banks every where very freep, and in fome places fo deeply hollowed, or undermined by the water, that parts of them, to the fize of a house, had fometimes fallen in, which we could fee had happened in feveral places.

At funfet, arriving at the channel of *Chogdab*, we ran into it for fhelter during the night, apprehending that we fhould be overtaken by a thunderftorm, as the wind began to rife, and the fky appeared dread-fully black and lowering. We fastened our *budgerow*, with ropes, to both fides of the channel, because these vesses are easily over-fet by the wind, not having any support or hold on the water, on account of their flat bottoms.

Before the form came on, we took a K 4 walk walk along the banks, and faw three bodies of Bengalese burnt. This is done by the relations of the deceased, or by his fons, if he have any. They fit upon their heels, round the burning pile, fmoaking their gorgor, and feed the fire, with the greatest indifference, as if they were burning a beast, ftrewing the afhes afterwards in the Ganges. The bodies of those, who do not leave property enough to purchase firewood for this purpose, or whose relations are poor, are exposed by the riverside, to be devoured by the jackals, and other wild animals. Thefe, likewife, as foon as it begins to grow dark, iffue out of the woods, and come to the the river, howling dreadfully all night long, while they also fight with each other for their prey. Some of them are often found lying dead in the morning, efpecially the wild dogs, who are not a match for the jackals.

. We were obliged to defift from our walk, on account of its falling dark; and we were warned by a Bengalefe, that there were many tigers, who had their haunts not far from us, and who in the evening were wont to repair to the riverfide.

The

The florm came on about eight o'clock, and burft all around with tremendous force. The thunder was very violent, and the lightning to fierce, and fhot in fuch broad flafhes along the ground, that the whole neighbourhood feemed to be on fire. This was accompanied with fuch heavy fqualls, that we durft not remain on board our veffel, but went on fhore, and flood in the open air, though exposed to all the inclemency of the weather. The florm did not abate till eleven o'clock at night.

At midnight, we left the channel, and fell down the river with the ebb, but about an hour before daybreak, we were again obliged to feek for fhelter, in the channel of *Niafferai*, as the wind began again to blow hard.

As foon as the day broke, we went on fhore, in order to walk overland to *Terbonee*, whither we ordered our *budgerow*, to wait for us there.

The way led first through an extensive wood, which was filled with all kinds of birds, and afterwards over a level plain, mostly consisting of pasture-grounds. About an hour before we came to *Terbonee*, we entered tered another wood, into which, having advanced a little, we met with an ancient building, of large fquare ftones, which feemed as hard as iron; for whatever pains we took, we could not, with a hammer, break any pieces off. The building was an oblong fquare, thirty feet in length, and twenty in breadth. The walls were thirteen or fourteen feet in height. It had no roof, and within it, were three tombs, four feet above the ground, made of a blackifh kind of ftone, and polifhed, with here and there fome Perfian characters engraved upon them.

The Bengalese believe, that this was built by a great magician, in one night, without the affistance of any mortal hand.

About forty paces farther, was a large, but very ruinous building, the roof of which confifted in five domes, or cupolas, which had been adorned with fculptured imagery, but which was much obliterated.

The Bengalese could not inform us of the purpose, or time, of the erection, but it now ferved as a residence for *faquirs*, some of whom we faw fitting in it.

About ten o'clock, we came to the mouth of the channel, where we found our veffel, and went down the river to *Chinfurab*.

On

On the 22d of February, the director Vand fome members of the council, accompanied by their ladies, paid a national vifit to the French governor, to which party I was likewife invited.

These visits are made annually, from one fettlement, or factory, to the other, at the commencement of the year, or whenever a new governor, or director, enters upon his government.

Much ceremony is observed, when the visits are received at the place where the factory itself is fituated; and therefore Mr. V----- had intimated to the French governor, that he should prefer waiting upon him for this purpose, at his country-feat, near Garetti. In the afternoon, at four o'clock, we fet off in fix carriages, and reached Garetti at fix, where the director V-----, and Mr. F-----, who was likewife one of the party, were received at the bottom of the fteps afcending to the houfe, by the French governor, and conducted into a large faloon, in which the principal ladies and gentlemen of Chandernagore were affembled. About feven o'clock, the company were invited by the governor, to be fpectators

fpectators of a play, which fome amateurs were to perform, in a flight building, which had been erected for that purpose.

When the play was over, which was about ten o'clock, we were led into a large room, and were entertained with an elegant fupper, to which upwards of an hundred guefts, both ladies and gentlemen, fat down. At one o'clock we took our leave, and rode back to *Chinfurab*.

The national vifit to the English, to which I was also invited, was appointed to be paid on the 26th of the same month. This was chiefly intended to congratulate the new English governor, CARTIER, upon his appointment.

We were eight of us, who were prefent at the vifit; and at four o'clock in the afternoon, we went from the director's houfe to the quay, where the Company's great budgerow was lying ready. The garrifon was drawn up in two ranks, within the fort, and a detachment, confifting of an officer and twenty-four privates, marched before us, which was to accompany us, as an efcort, and to ferve as a body-guard to the director. As foon as our budgerow put off from the

fhore,

fhore, a falute of twenty-one guns was fired from the battery. Every one of the company had his own veffel to pafs the night in, but in the day-time, we were all on board of that of the director, in which there was a room where fix and thirty people could fit down to table. At the mafthead of the director's *budgerow*, there was a Prince of Orange's flag \*, with the arms of the Union, and those of the other veffels carried a prince's pendant.

Befides ours, there were feveral other veffels, in which the foldiers and fervants were embarked; two that were to be used as kitchens, the victuals being dreffed on board of them; and two as storeships, to carry the provisions. There were, in all, thirty-three vessels of different fizes, which formed a pleasing sight when they were all together.

In the evening, at half past eight o'clock, when the ebb began to fail, we came to an anchor, with our flotilla, a little below Serampore.

\* The Prinfevlag, or Prince of Orange's flag, is the name given by the Dutch feamen to the naval enfign of the United Provinces, and the fame that is full the national flag, being three horizontal flripes, red, white, and blue. T.

At four o'clock on the following morning, upon the turning of the tide, we again proeeeded downwards, and at feven, we came to Chitpore, fituated about a Dutch mile: above Calcutta, where we ftopped for the deputies from the English council, who were to come to receive the director and his company. Half an hour afterwards they arrived, and paid a vifit of welcome to the director, in his budgerow. The chief of them was the fecond in command at Calcutta. Mr. RUSSEL.

After a flay of about a quarter of an hour, they conducted the director on fhore; and, followed by the reft of the company, they entered a handsome summer-house, close to the river, which belonged to Mr. RUSSEL.

We found breakfast prepared for us here, and after flopping about an hour, we left this place, in five coaches, fent by the governor for that purpofe. Six of his lifeguards on horfeback, dreffed in blue, with gold-lace, rode by the fide of the coach in which the director was. At ten o'clock we were fet down in Calcutta, at the houfe prepared for the reception of the directorV-----. It was a very handfome building, provided with

I

with many and roomy apartments, all furnished in the European style, and hung with damasked silk. It was the property of the little nabob, or minister, MAHOMED REZA CHAN, who had purchased it of an English gentleman, for 120,000 rupees, and always resided in it when he was at *Calcutta*; but as he was not now in the place, the English government had made use of it. On the area, before it, stood a company of eighty seapoys, under arms, commanded by an European officer, as a guard, in honour of our director; which continued to do duty as such all the while he remained at *Calcutta*.

When the director alighted before the houfe, a falute of nineteen guns was fired from Fort William.

As foon as we had entered the houfe, the director difpatched one of his *cbubdars*, with a meffage to the Englifh governor, who refided in the governmenthoufe, next to that in which we were, to enquire if it were convenient for his Excellency for us to wait upon him in a body. Soon after, however, came that gentleman himfelf, accompanied by all the members of the council of *Calcutta*, to welcome the director.

## [ 144 ]

director. After the first complimentary ceremonies were over, Mr. V—— faid, that the object of this national visit, was to congratulate Mr. CARTIER upon his accession to the governorship, adding, as a particular compliment, that he hoped Mr. CARTIER would fo well manage affairs, as to be able to return to Europe in a few years; to which that gentleman replied with a smile, and expressed his thanks by an amicable interchange of civilities.

These compliments were made and returned, by the director in French, and by the governor in English, the latter not understanding French, nor the former English, while Mr. RUSSEL performed the office of interpreter.

This visit of ceremony lasted more than an hour. The governor then departed, with the gentlemen of the council. Half an hour afterwards, the director V—— went with us to pay a visit of ceremony in return, to the governor, which lasted about three quarters of an hour; at the conclusion of which he conducted us out, accompanying us to the steps, in the fame way as the director had done upon receiving his visit just before.

5

About

About half paft twelve o'clock, having been formally invited to dinner by the governor, we went again to the governmenthoufe

Here we found, in a large and airy faloon, a table of fixty or feventy covers. The fervice was entirely of plate. The director was feated at the upper end, on the right hand of the governor, having, on the other fide, the general of the English land-forces, being the third perfon in the council of Calcutta, or rather the fecond, exclusive of the governor. The other gentlemen in company, were placed promifcuoufly at ta-Full half of the guests were officers of ble. the troops, for whom the governor keeps every day open houfe.

When the cloth was taken away, a booka, which is a glass filled with water, through which the fmoke of tobacco is drawn, and of which I shall speak further, was set before every one of the company, and after having fmoked for half an hour, we all rofe from table, and feparated each to his respective dwelling.

The conversation was carried on at table, in a free and unconftrained manner, without L

VOL. I.

out the company being under any fear or restraint, from the presence of the governoror of other great men. The fpirit of liberty, which animates a Briton in his own countryis repressed as little here, as there. This freedom and eafe, is diametrically opposite to the stiff and obnoxious formality, which takes place at Batavia, in the company of the governor general, and the counfellors of India. Indeed, an Englishman could never brook the infupportable arrogance, with which the Dutch East-India Company's fervants are treated by their fuperiors, as well at Batavia, as at the out-factories. T+ would be well, if this conduct remained folely confined to the Afiatic regions, which gave birth to it; but, unfortunately, we fee it continued by purse-proud individuals, when they return to a country, where, from the most ancient times, it is known to be in perfect contradiction to the genius and temper of the inhabitants. It is certain that this is one reafon, why there are fo few to be met with, who ferve the Company with fidelity, or a fense of honour. Every one attends folely to the main business, of well and fpeedily lining his purfe; and all look to the time.

time, when they shall be able to withdraw themfelves, from the infolent dominion of an arbitrary government, against which little or nothing can be faid or done.

At fix o'clock in the evening, Mr. CAR-TIER came to fetch the director V---- and his company, to take a ride to his countryfeat, Belvedere, about two Dutch miles from Calcutta, where we were entertained with an excellent concert, performed by fome amateurs, and an elegant fupper. About twelve o'clock at night, we rode back to Calcutta.

The next morning, at nine o'clock, the governor came again to pay a vifit to Mr. V-----, and made him an invitation to dinner, and to a grand ball, which was to be given in the evening, at the courthouse. Hither we went, at feven o'clock, and the ball was opened by Mrs. CARTIER and Mr. V\_\_\_\_

The company were very numerous, and all magnificently dreffed, especially the ladies, who were decorated with immenfe quantities of jewels. A collation was ferved in an adjoining apartment, and the whole was

L 2

was conducted with great elegance, lafting till the next morning.

This day being appointed for us to fet off on our return to *Chinfurab*, we went at nine o'clock in the morning, with the director, to take leave of Mr. CARTIER, and the other gentlemen who had been to fee us, and dined at Mr. RUSSEL's, whence we took our departure, about half paft three in the afternoon, in coaches, for *Chitpore*, where our little fleet was lying, ready to receive us.

The director was faluted, on leaving the place, as he had been on his arrival, with nineteen guns from Fort *William*. The fix lifeguards of the governor, who always accompanied Mr. V——, when he went out, while he ftayed, did not leave us till we came to *Chitpore*, where he gave them a handfome prefent in money, as he had done to all the fervants of the governor who had attended him, which altogether amounted to full a thoufand rupees, or fifteen hundred gilders.

The fame deputies who had come to Chitpore, to receive Mr. V——, conducted him

him again on board his *budgerow*. We departed hence, at funfet, with the floodtide, upwards, and reached *Garetti* early the next morning, where we were received by Mr. CHEVALIER, at his country-houfe, and took our breakfaft with him. We found here the carriages of the director V——, ready to carry us to *Chinfurab*.

At nine o'clock, we rode from Garetti to Chandeenagore; and after having paid fome vifits in that place, we proceeded to Chinfurab, where we alighted before the houfe of the director F—, under a falute of twenty-one guns from the battery. Thence the director V— led us to his own houfe in the lodge, where we found all the members of the council, affembled to meet him; and were entertained at dinner by Mr. F—.

On the 8th of March, Mr. F—— was formally announced, as director of the Company's trade in the kingdoms of *Bengal*, *Babar*, and *Orixa*, by Mr. V——, who had fixed his departure to be eight days afterwards.

On this occasion, all the fervants of the company, from the highest to the lowest, assembled, at seven o'clock in the morning,

L 3

aţ

at the house of Mr. V—, where a costly breakfast was provided for them. The wives of those who were married, were equally present. The garrison was under arms, in the court-yard, within the lodge.

About nine o'clock, both the directors, with all the members of the council, afcended the platform, over the landgate, where the commission given to Mr. F---- by the council of India at *Batavia*, was read aloud by the fecretary, after which a discharge was made, of three vollies by the military, and one-and-twenty guns by the battery.

Returned to the council-chamber, the commiffion was again read, and Mr. V— addreffed Mr. F——, and the members of the council, in a fpeech, by which he affured that gentleman, of his fatisfaction, that the time was now come, when he was relieved from the heavy burden of an office, which he had filled for upwards of five years, during which period he had promoted, as much as his humble abilities admitted, the intereft of the company; and adding, that his fatisfaction was greatly increased, by having to refign his government into the hands of a most worthy fucceffor, and his fincere

fincere friend. To this speech, Mr. F----replied by another, couched in the most polite terms, and in which he was not sparing in panegyrics of Mr. V-----, and of his lady.

The whole ceremony was concluded in the evening, by a ball, given by Mr. F----, in the garden of *Welgelegen*.

The following day, the directors received a letter from Patna, which is a large city in the kingdom of Bahar, about ninety leagues distant from Chinfurab, where the Company have a factory, for the opium and faltpetre trade, informing them, that the ravages of famine were there to great, that hundreds of Indians perifhed daily for want of food; fo that our people avoided going out of the lodge, in order not to behold the mifery of these wretched inhabitants, who lay dying in crouds, along the ftreets and highways, merely for want of nourifhment. The furvivors began even to attempt fatisfying their craving hunger, with the flesh of the dead, in order to preferve their own existence. In this inftance, the observation, that nature overcomes precept, was forcibly verified; for these poor, superstitious heathens, into whom. L 4

whom, from their childhood, an abhorrence of every kind of animal food is inftilled, and more especially with respect to human flesh, on account of their belief in the transmigration of fouls, now fought to prolong their miserable existence a little while, by devouring the flesh of their fellow-creatures.

The dire effects of famine too were felt in Bengal. At Chinfurah, a woman, taking her two fmall children in her arms, plunged into the Ganges, and drowned herfelf, not poffeffing, or being able to procure, any thing to fatisfy the raging hunger of her tender offspring. The banks of the river were covered with dying people; fome of whom, unable to defend themfelves, though fill alive, were devoured by the jackals. This happened even in the town of Chinfurab itfelf, where a poor fick Bengalefe, who had laid himfelf down in the ftreet, without any affistance being offered to him by any body, was attacked in the night by the jackals, and devoured alive; and though he had ftrength enough to cry out for help, no one would leave his own abode, to deliver the poor wretch, who was found, in the morning, dead, and half-devoured.

The

The Bengalefe will feldom affift each other, unlefs they happen to be friends, or relations, and then the fervice that they render, only confifts in carrying the fufferer to the water of the *Ganges*, to let him die there, or be carried away by the ftream, and refign his breath in its waves; for they all truft, that by this means, they will be purified from most of their fins, and their fouls be translated into the body of an happier creature.

This dreadful calamity was occafioned, partly by the failure of the rice-harveft, the preceding year, but it may chiefly be attributed, to the monopoly which the Englifh had made of the rice, which was reaped the feafon before, and which they now held at fo high a price, that the natives, most of whom could earn no more than one, or one and a half, ftiver (penny) per day, out of which they had to maintain a wife and children, could not buy, for this trifle of money, the tenth part of the rice they wanted, the confequences of which were, that whole families perifhed miferably.

The evil was augmented by another fcourge, almost equally calamitous, the fmallpox, ·[ 154 ]

pox, which attacked people of all ages, and brought many to the grave.

This added to the contagion which had already contaminated the air, through the number of half-putrified bodies which lay unburied, or unburnt, along the banks of the river; hence the mortality encreafed more and more, especially after my having left *Bengal*. The director F—— died of the small-pox, in the month of May ensuing, as I was informed, just before my departure from *Batavia*.

The heat of the weather now likewife augmented, from day to day, fo that at noon it equalled, and fometimes furpassed, the warmth of the blood: men and animals could fcarcely breathe; and, although the heat was confiderably lefs within doors, than in the open air, it was, neverthelefs, fcarcely fupportable to me, and to every one, who had not been used to it. Water was poured, from time to time, upon the stones of the court-yards round the houses, which afforded a momentary coolnefs, but it foon vanished before the fcorching rays of the fun. The water taken out of the Ganges, differed only eight or ten degrees in warmth, from the air in

in the fhade where my thermometer hung; this ftood, in the latter end of the month, at 104°, and, when I took the tube in my hand, the mercury fell to 98°; whence it appeared, that the heat of the outward air, furpaffed that of the blood, by 6°.

On the 15th of March, which was the day on which the director V—— was to leave *Chinfurab*, for the road of *Ingellee*, where the fhip *Ritthem* lay ready to convey him to *Batavia*, all the Company's fervants affembled anew, with their wives, early in the morning, at the director's house, in order to take leave of him and his family, and to wish them a prosperous voyage; for that gentleman thought himself of too much consequence to go to them himself, to take leave.

1

At

At eight o'clock, the keys of the lodge, or fort, were brought in by an officer, upon a filver waiter, and were delivered by the director V——, to his fucceffor in the directorfhip, Mr. F——.

A few minutes afterwards, having taken his leave of all the perfons prefent, on which occafion the complimentary parade was even accompanied by tears, either of genuine regret, or of hypocritical affectation, Mr. V----- left the houfe and the lodge with his family; he was conducted by the whole affembly to the quay, where the budgerows were lying in readinefs. On the way, he fcattered fome money from his palankeen, among the Indians; and was faluted, when he left the fhore, by one-and-twenty guns from the battery. Mr. F----, with feveral other ladies and gentlemen, intending to accompany Mr. V---- down to Fultab, invited me to go with them, which I the more willingly did, having fome affairs of my own to transact at Calcutta, where the director and his company were to ftop two days, before they proceeded to Fultab.

We arrived the next morning at that place, where the directors were faluted with nineteen teen guns from Fort William. We were all fumptuoufly entertained at dinner, by the English governor, and invited in the evening, to be fpectators at a play, which, as at Chandernagore, was performed by fome amateurs, in a house erected for that purpose. A little before the conclusion of the performance. Mr. F---- received a letter from Chinfurab; informing him, that his lady was at the point of death; whereupon that gentleman refolved to return the fame night to Chinfurab, and requested me to accompany him.

Having done what I wanted for myfelf, at Galcutta, I was glad to return again to Chinfurab, as the time was fast approaching, when I was to leave the Ganges, and befides, the company I was with, was not the most agreeable to me.

At midnight, after having fupped with the governor, we departed up the river in Mr. F----'s budgerow, and reached Chinfurab at feven o'clock in the morning, where Mr. F----- was received with a falute of oneand-twenty guns.

Mrs. F---- died on the 27th of March, and was interred, with great pomp, on the 29th.

5

### [ 158 ]

29th. Her husband belonged to the fraternity of free-masons, and all the brethren, and the wives of such as were married, wore the mourning of the order, which confisted in a black ribbon hanging on the breast, with the infignia of the order pendent from it.

The departure of my fhip was, in the mean time, put off from day to day, because the papers which were to be conveyed to Batavia by her, were not yet in readinefs. This was chiefly occasioned, by the negligence with which the affairs of the Company had been managed, during the latter part of the administration of the director V----; and I was of opinion that this was defignedly done, in order that, if forced to ftay too long in Bengal, I might be necessitated to take my passage through the Straits of Malacca, in which cafe, there would be no poffibility of my reaching Batavia, fooner than the middle of November; and even if the monfoon changed earlier than ufual, I should be obliged to remain in the Ganges till the next feafon; fo that he would have had an opportunity of failing for Europe, before the papers, which were to come by my fhip, would have reached Batavia, and which he was confcious would

would contain very ferious matter, that would be of great prejudice to him, and, in confequence of the appearance of which, he would be obliged to remain in India, to render an account of his administration. His fears on this head were, in fact, realized, for I was fortunate enough to reach the capital in time.

At last these papers were got ready, and, on the 31st of May, they were delivered to me by the secretary of police; at the same time I received the dispatches for the governor general, from the director F——. This gentleman endeavoured to persuade me to stay that night at *Cbinsurab*, being fearful that I should be overtaken by a thunderstorm, which seemed to be brewing over us; but having nothing in view, but to make all possible speed to leave the *Ganges*, before the bad season, which was very near at hand, should set in, I lest *Cbinsurab*, the same evening, in a *budgerow*.

It was when we were before Chandernagore, that the form burft upon us, with loud thunder, and tremendous flashes of lightning, and the wind blew so hard from the fouth, that it was with difficulty we could get [ 160 ]

get to Garetti, where we anchored at midnight.

The following day, rowing down the river with the ebb-tide, we paffed *Galcutta*, in the forenoon, and at two o'clock in the afternoon, we ftopped for the tide, at a place which we call the *Boter-tol*, or *Butter-tollboufe*, and found ourfelves under the neceffity of lying here all night, on account of the violent foutherly wind.

We fell down again the next day, with the ebb, but made but little progrefs, as we had a pretty high gale from the fouth, and were not able to advance farther than *Rajapore*, which is one Dutch mile and a half above *Fultab*.

At eight o'clock, A.M. on the 3d of April, we arrived at *Fultab*. Stopping here, we found a floop, with the allowance of fpirits for my thip. At nine o'clock, another arrived with a part of my cargo, and which had to take an anchor on board, for my thip, in the place of one that had been broken. Befides this, there were more goods intended to form part of my cargo, which had been put on board of fmall veffels, but which were not of a fufficient fize to navigate the river

river farther down, in this advanced feation of the year, and had therefore remained feveral days waiting for a floop, in which they might refhip their cargoes. Fortunately one arrived at night, into which the goods were all put. The cargo, however, was still incomplete; fome part of it being yet expected from above, but I had no inclination to flav longer for it. I accordingly put off at nine o'clock, A.M. with the three floops, in one of which I embarked, and fent my budgerow back to Chinfurab. At two, P.M. we anchored before the Garnaale Spruit, or Shrimp Channel, whence we fet fail again in the evening, anchoring at one o'clock in the night, about half a Dutch mile below Dover. The next morning, at nine o'clock, we again got under fail, and proceeded downwards, anchoring at three, P.M. by the Haze Spruit, or Hare Channel, and at three the next morning, before the channel of Cajoree. On the 6th, about nine o'clock, P.M. we again got under weigh, and came on board of my fhip, the Cornelia Hillegonda, in the road of Ingellee, at noon.

We immediately occupied ourfelves with fhipping the goods conveyed by the floops, vol. 1. M which which took us up the remaining part of that day, and part of the next.

As foon as I came on board, the pilot who was to have charge of the ship out to fea, informed me, that he was very averfe to undertake it. as the monfoon was already changed, and we had to expect bad weather every day; and that if we were overtaken by it while we were between the banks, the thip would certainly run the greatest danger of being loft. However, after a fmall prefent had infused some courage into him, he promifed to make the trial, provided I waited no longer for the reft of the cargo, which was still expected from Chinfurab. to which I agreed; and thereupon calling the ship's council together \*, we were unanimously of opinion.

The captains of fhips in the fervice of the Dutch Eaft-India Company, are obliged, by their articles, to confult their lieutenants refpecting the courfe to be fleered; and if they cannot agree, a council is to be fummoned, confifting of the five principal officers on board, including the captain, where the matter is decided by a majority of votes. This council likewife, takes cognizance of whatever, not relating directly to the navigation of the fhip, may be called extraordinary circumftances; and determines, among other things, refpecting the diminution, or increase, of the allowance to the crew; the touching at any places for reparation, or refreshment; the time

opinion, that it was more for the advantage of the Company to leave what ftill remained behind, of the cargo, than to incur the rifk of being obliged to ftay with the fhip in the *Ganges*, till the next feafon.

On the 8th of April, every thing being ready, we weighed, and fell down in the afternoon with the ebb, anchoring in the evening, clofe by a buoy, upon a ridge of fand that fhoots ftraight athwart the paffage. Weighing again with the beginning of the ebb, we worked farther down, againft the s.w. winds, till on the 10th, we got fafe without the banks, and into the open fea. By the pilot, who left us at midnight, I fent fome letters up to *Chinfurab*.

We were now apprehensive, that, as we had to expect nothing but fouth-westerly winds, and our intended course was direct fouth, in order to get above the Andaman and Nicobar Islands, we should be forced below them, and thereby likewise fall to leeward of the point of Acbeen, the northwest end of Sumatra; in which case, nothing would re-

time to be paffed there, &c. as per art. 111 IV. V. and VI. of the East-India Company's *Artikal-brief*, or articles of engagement, entered into by the perfons in their employ. *T*.

main

main for us, than to pass through the straits of Malacca to Batavia, and thereby considerably lengthen the duration of our voyage.

But our fears were fortunately, in this inftance, not realifed. We paffed to the windward of those islands, so as not to see them.

On the 3d of May, we found ourfelves in the north latitude of 7°, which is that of the fouthernmoft of the Nicobar Iflands. Having, therefore, got beyond thefe, we entertained hopes of a fpeedy profecution of our voyage round Sumatra. The fudden fqualls, or whirlwinds, which came upon us almoft every day, were our chief hindrance; they often rufhed on us fo unexpectedly, that we had fcarce fufficient time to take in our fails; they were ufually fucceeded by dead calms, which lafted the remainder of the day; and we were hereby greatly impeded in our progrefs.

Very unexpectedly, at daybreak, on the icth of May, being in the north latitude of four degrees and a half, we difcovered the ifland *Sumatra*, not far from the point of *Acheen*.

We had observed some figns of land for a

few

few days before, namely, we had feen pieces of wood and bamboo floating on the water; but we flattered ourfelves that thefe came from the *Nicobar* Iflands. We now found that the currents, which must have only fet to the northeastward, after our passing those islands (for had they driven us before in an easterly direction, we must have run in fight of them), had carried us full thirtythree leagues towards the east.

We were, by computation, four leagues and a half off fhore, when we made the land. It appeared to the eaft like fmall iflands, but more northerly, like connected land, with high mountains inward.

Fortunately, we were fifteen or twenty leagues to windward of the point of *Acheen*; for had we fallen clofe in with it, or to leeward of it, we fhould, for certain, have loft the opportunity of paffing round *Sumatra*. We yet ran fome danger of being driven to leeward, from the continual calms, and the ftrong currents, which fometimes fet to the north, and fometimes to the foutheaft.

Frequently, when we were driving along, in a dead calm, 1 had the boat hoifted out, in o: der to observe the course of the current.

For

For this purpose, a heavy grapnel was faftened in a large tub, and attached to a coil of rope, that was long enough to let down this apparatus, fix or feven hundred fathoms below the furface of the fea; and as there was no current at that depth, the boat lay, as it were, at anchor, and bore up with its head to the current. In order, in the next place to afcertain the exact direction and degree of rapidity of the current, one of our fweeps was taken, the leaf of which was painted white, a weight was fastened to the other end. fo as to make it ftand upright in the water, with the white part five or fix feet above the furface. To this end, a logline was attached, in order to fee how far the fweep would be driven away from the boat, by the current, in a given time, to be observed by a stop-watch, and towards what point of the compass, having one with us in the boat, for that purpose.

In the space of five minutes, I found that the sweep was driven by the current, in the direction of north by wess, to a distance of two hundred and twenty-fix Rhineland feet from the boat, which may be estimated to make about three leagues in four-and-twenty hours.

hours. This was the refult of our experiment the first day, but in the following days, we found the currents set to the northeast, at the rate of five or fix leagues in twentyfour hours.

But not having always an opportunity of hoifting out the boat, I caufed a lead of feventy pounds in weight, to be let down by the founding-line, to the depth of eighty or ninety fathoms, and fastening an empty cask to it, which held up the lead, and was kept stationary by it, the ship drove away from it, by the current; for she had no other motion, on account of the calm. We found by this, that the currents set more to the east, and southeast, every day; and on the *i*5th of May, we succeeded in getting off from the shore, which we lost sight of that day, at noon.

We now purfued our voyage with lefs apprehension, yet we made no greater progrefs than before, by the continual calms, which were only interrupted by fudden whirlwinds, of an hour or two in duration \*.

**From the frequency of these fudden fqualls, in the** meighbourhood of Sumatrie, the Portuguele first, and afterwards the English feamen, have given them the name of the island, and call them fuzzeral. T.

M 4

# [ 168 ]

On the 15th of May, the fun role, during an eclipfe, which was then full two-thirds completed. I observed the end of the eclipfe, fifty-eight minutes, and thirty feconds after fix o'clock : this was to have been at Chandernagore, at thirty minutes past fix ; thus, the difference of time, between that place, and where we were, was 28' 30"; or 7° 8' longitude, that we were to the eastward of Chandernagore, whose longitude we knew was 105° 1' east from Teneriffe, and our estimation was 111° 95'; hence we found that we were eleven leagues more to the eastward than by the ship's reckoning. The day before we had paffed the line to the fouthward.

On the 29th of that month, we met, and hailed, the Eaft-India Company's fhip, Duinenburg, Captain JOHN VERHEEK, from the coaft of Mallabar; fhe had left Cochin on the 4th, and was equally bound to Batavia. We failed in company, till the 4th of June, when we left her behind, and loft fight of her.

The following days, we faw many figns of land, as rockweed, bamboos, large pieces of wood, and a fpecies of red blubber, or mollufca, floating

floating on the water; likewife feveral landbirds, and a number of white and yellow tropic birds. Sometimes whole trees floated by the fhip, with their branches and roots, yet frefh and uninjured. We concluded, that all this came from the ifland *Engano*; for when we flood towards *Sumatra*, we met with hardly any of them.

On the 10th of June, we again faw the ifland of *Sumatra*, and the high hill of *Sillebar*, which lies near *Bencoolen*, and we found that we were thirty-fix leagues more to the weftward, than by the fhip's reckoning.

The foutheafterly winds, now blowing very hard along the weft coaft, we were obliged to work up against the wind, towards the straits of *Sunda*, and it was not before the 20th of June, that we came abreast of the *Flat Point*, and *Prince*'s Island; and on the 25th we anchored in the bay of *Anjer*, whence we set fail the next day, and arrived in fast, in the road of *Batavia*, on the 2d of July, having had no more than four men dead, during the voyage.

#### CHAPTER VI.

Appointment of the Commodore of the homeward Fleet.—Earthquake at BATAVIA.—Chinefe Festivals.—Thunderstorm.—Arrival of the Endeavour, Captain COOK, from the South Seas.—Account of an Otabeitan, brought to BATAVIA by that Ship. —Thankfgiving, Fast, and Prayer Day.—List of the homeward Fleet.—Departure from BATAVIA. —The Reef of ANGUILLAS.—View of the Land of AERICA.—Anchorage at ROBBEN Island.

AS foon as I came on fhore, I found that my fhip had, the fame morning, been appointed to return to Europe, as forerunner \* of the fleet, for the chamber of *Enkbuizen*. But going the fame evening to give an account of my Bengal voyage, to the governor general VAN DER PARRA, his excellency

\* The homeward-bound Dutch East-India Company's fhips, are divided at *Batavia*, into two fleets, one of which generally leaves India towards the ond of the year, the other fome months afterwards; and fome days before the departure of each, a fingle fhip fails for Europe, which is called the unrescilder, or forerunner. Except, however, in war-time, thefe fhips feldom fail, or keep together, though they usually rendezvous at the *Cape of Good Hope*. T.

5

told

told me, it would be better for me, that I should return to Europe, in a large ship of a hundred and fifty feet, for the chamber of Amsterdam, than in a small vessel, like the Cornelia Hillegonda, for a chamber of lefs confequence. On this account, the next day, in the council of India, the command was given to me, of the fhip, 't Huis ter Mye. being one of a hundred and fifty feet. and which was bound for the chamber of Amsterdam. At the fame time, the commandant, and upper comptroller of equipment of Batavia, Anthony Vogelzang. was appointed commodore of the homeward fleet; but this gentleman dying foon after. Captain FREDERICK KELGER, of the thip Kroonenburg, was appointed in his stead \*.

On the 15th of July, I took over the command of the ship, 't Huis ter Mye, from Captain HARTZ, and three days afterwards,

• The command of the fleet is given to the fenior captain, unlefs when a paffenger of higher rank, in the Company's fervice (for all perfons in their employ, whether in a civil, a naval, or military flation, have their refpective rauks), happens to be returning to Europe, and then the paffenger, whether he be in a naval, or in a civil capacity, is appointed the commodore, and the fhip he goes by, becomes the flag-fhip. T.

I gave

I gave up to Captain MARTIN LABAAN, that of the Cornelia Hillegonda.

On the 17th of September, at about half paft five in the morning, just as the day began to break, the flock of an earthquake was felt at Batavia, which lasted full two minutes, but did not do much damage. The water in the canals toffing to and fro with impetuofity, feemed, by its agitation, as if boiling. Whatever was pendent in the houses, like chandeliers and glass lanthorns, was in motion for three quarters of an hour afterwards. All the clocks, both within and without the city, the pendulums of which ofcillated east and west, stood still; but those that hung to the north and fouth, were not affected. A clock which was in the house I was in, stood still at thirty-two minutes past five.

On the 18th and 19th, there was a great feftival of the Chinefe, inftituted as an interceffion for their fick. In the evening, one or more bamboos, having feveral lanthorns hanging at the top, were fluck up before every houfe, which made a pretty appearance, in the Chinefe campon, or fuburb.

This

This was followed, on the 9th of October, by a grand feftival, in honour of their *jooftje*, or *jofs* \*, to whom they offer a number of coftly prefents; they made likewife a large veffel of paper, and combustible matter, which was highly adorned with flags, and set it on fire in the evening, letting it drive out to sea, where it was very soon confumed. This is only what I have heard related, being myself, at that time, at the island Onruft.

In the evening and on the night of the 11th of October, we had a violent thunderftorm, which did no harm in the city, but in the road, the lightning fell, about eight o'clock, upon the fhip the Admiral de Ruiter. The mainmaft, maintopmaft, and topgallantmaft, together with their yards and fails, and the foretopfail, and yards, were fhivered all to pieces, and the wreck of them

\* The images which the Chinese worship, are called joo/lj. by the Dutch, and jo/s by the English feamen. The latter is evidently a corruption of the former, which being a Dutch nickname for the devil, was probably given to these idols by the Dutch who first faw them, either from their hideous appearance, or from the principle that all idolatry is demonolatry. On no better ground than this, the authors of the Universal History, accuse the Chinese of worshipping the devil, knowingly and de facto. T.

I

lay

lay upon the quarter-deck, to the height of fifteen feet \*. A longitudinal fiffure was likewife made in the quarter-deck, but no foul on board was hurt, nor was there any damage done to any of the other veffels in the road.

A few days before this event, the English ship, the *Endeavour*, commanded by Captain Cook, had arrived in the road of *Batavia*. This vessel came from the Pacific Ocean, and had been twenty-feven months from England, having thus far circumnavigated the globe, from the east. They had with them an Indian, whom they faid was a native of a country which they had discovered in the

\* Captain Cook, who was then at Batavia, in the Endrawour bark, as noticed in the next paragraph, relates this ineident, exactly as above, and adds, " fhe had an iron fpindle " at the main-top-gallant maft-head, which probably directed " the ftroke. This fhip lay not more than the diftance of " two cables' length from our's, and in all probability we 46 should have shared the same fate, but for the electrical " chain, which we had just got up, and which conducted " the lightning over the fide of the fhip; but though we " escaped the lightning, the explosion shook us like an earth-" quake, the chain at the fame time appearing like a line of " fire : a centinel was in the action of charging his piece, and " the flock forced the mufquet out of his hand, and broke " the rammer-rod." Hawkefworth's Voyages, Vol. IV. page 341, octavo edition. T.

South

## [ 175 ]

South Sea, but they would not reveal where it was fituated. This Indian was of a middling fize, rather fat than otherwife, of a dark brown colour, and with long and thick hair. which hung half way down his back ; it was loofe, and of a jetty black; it grew low down upon his forehead. His beard was likewife black, of a middling length. and uncut, contrary to the cuftom of most Orientals : the nails of his hands were long: his countenance feemed forrowful, and his disposition timorous. His dress consisted of a large piece of white cloth, which was thrown over the shoulders, and which appeared to me to be made of the bark of trees. The English gentlemen, with whom he came, and who had likewife a Swedifh naturalist. Dr. SOLANDER, with them. faid that they understood his language ; but when they conversed with him, it feemed to me that it was mostly done by figns. He would not eat of any thing that was fet before him; and continually cast his eyes on all sides around him, expressing the greatest astonishment at what he faw and heard #. We understood

\* TUPIA, the Otaheitan here alluded to, who accompanied Captain Coox, as far as *Batavia*, died there, the following derftood from the English, that they had flayed eight months at that island, which they called *Otabeite*, and that all the natives refembled the one they had brought away.

A thanfgiving, faft, and prayer day, was held at *Batavia*, on the 17th of October. This folemnity takes place every year juft before the departure of the return-fleet, for Holland, being partly inftituted in order to fupplicate heaven to grant them a profperous voyage. A fermon is preached on that day, on board of the flag-fhip, in the road, at which all the commanders of the veffels there, with part of their crews, are prefent.

On the 24th, the governor general went, with a great retinue, on board of the fhip *Kroonenburg*, in order to inftal the commodore of the homeward fleet, FREDERICK KELGER. For this purpose, all the fhips

ing month. The reader of Lieut. Cook's voyage, who will have ftrongly interested himself for this amiable Indian, will fcarcely recognize him in the picture here drawn of him; but the rapid progress of a bilious diftemper, which poor TUPIA laboured under, during the latter part of the voyage, and the approaches of death in a strange land, are not adapted to give, either an expression of pleasure to the countenance, or of fortitude to the mind. **T**.

which

which lay in the road, were ranged in two lines, with the old admiral-fhip next to the river, and that of the commodore, the outermost. This was done in order that the governor general, passing between the lines, might have an opportunity of taking a view of every thip, at his eafe. His excellency came in a great barge, which was richly gilt, and had a pavilion, with glafs windows at the poop. The chief of the marine, and fome other gentlemen, were with him. The upper comptroller of equipment ftood before the pavilion, and commanded the rowers. As foon as his excellency came on board of the ship Kreonenburg, a broad pendant was hoifted above the enfign, at the maintop, while the old admiral-fhip ftruck her flag, and fired a falute of twentyone guns. Eight captains flood upon the fhip's ladder, as his excellency atcended, and all the others who belonged to the homeward fleet, were on the quarter-deck, together with the vice-commodore, to receive him. Under the awning, a breakfast was got ready for the governor general, and after he had taken fome refreshment. the commodore's commission was read by the fecretary VOL. I. N

fecretary of the governor, and his excellency then commanded the captains of the fleet, to obey the commodore, on their voyage to Europe. About half an hour afterwards, the governor general returned on fhore. Upon his leaving the fhip *Kroonenburg*, he was faluted with twenty-one guns, the broad pendant and enfign were both ftruck, and the commodore's flag hoifted in their ftead.

The ships that composed the first division of the homeward fleet, were as follows:

for the Chamber of Amferdam: the Kroonenburg, Com. FREDERICK KELGER: the Nieuw Rboon, Capt. JOHN HENDRICKS: the Young Lieven, ... HENRY DE HART: the Huis ter Mye, ... J. SPLINTER STAVORIMUS: the Woefiduin, ... MICH. GODFREY LEHMAN:

for Zealand :

the Duinenburg, Capt. JOHN VERHEEKE: the Young Samuel, Capt. PETER ANGLEVORST:

for Delft:

the Lady Antonetta Conradina:

for Rotterdam ;

the Flushing, Capt. JACOB 'T HART:

#### for Horn :

the Ridderkerk, Capt. PETER VAN PROYEN:

and for Enkbuizen:

the Cornelia Hillegonda, Capt. MARTIN LABAAN.

The

The laftmentioned had failed for Holland, on the 20th of October, as forerunner of the fleet, and the two first followed on the 25th; while the others had to stop, for a ship which was daily expected from the coast of *Caromandel*, in order to take over the bales of piece-goods she was to bring, and then to receive the complement of their cargoes in pepper. This vessel reached the road of *Batavia* three days afterwards, and the reshipment of the goods she brought, took place immediately; after which, the ships failed to the island *Onrust*, to take in pepper.

On the 3d of November, the water-bailiff came on board, to mufter the crew, which was found to confift of one hundred and eight feamen, eight foldiers, four mechanics, four paffengers, and one man, who was fent back to Europe, being unfit for the Company's fervice.

On the 5th of November, we got the laft of our pepper on board, and, together with the commanders of the ships, the Young Lieven, the Young Samuel, and the Lady Antonetta Conradina, having received our final N 2 dispatches difpatches from the governor general, we left the ifland Onruft, on the fame day, and anchored the next afternoon, at three o'clock, in the bay of Anjer. The Young Lieven, and my fhip, having ftill fome water to receive on board, remained here at anchor till the 9th, when we failed in the morning, and at night we cleared the ftraits of Sunda, and got out to fea. The two other fhips had failed the day before.

On the 10th, at noon, we took our last observation of *Prince*'s Island, and in the afternoon, we lost fight of *Java*, and steered first s.w. till in the fouth latitude of 9°, where we were fure of meeting with the settled foutheasterly tradewind, and thence we directed our course w.s.w.

As foon as we were out at fea, we found that our fhip was very leaky. We made eighteen inches water every watch, fo that we were obliged to keep the pumps continually at work. However narrowly we fearched, we could not find where the leak was, till about a month afterwards; when we accidentally difcovered that there was a hole in the bow, on the larboard fide, two feet

feet under water. The carpenter contrived. with much difficulty, to ram in a wooden plug on the outfide; for we could not get at it within the ship. This reduced the inroad of the water by one-half; but the leak was by no means ftopped, and our pumps were frequently choaked by the pepper, and we were forced to lift them out, to clear them again.

The day after we were out at fea, we loft fight of the Young Lieven, which thip outfailed us by full one-third, although Captain HART and I had agreed to keep in company.

On the 17th, at five o'clock, P.M. we faw a folar eclipfe, but we could take no observation of its beginning, for the fun was, at that time, obfcured by clouds; neither could we observe the end, for the fun fet at fix o'clock, before the eclipfe was over.

We proceeded pleafantly on our voyage, with the foutheast tradewind, which carried us quickly on, and paffing the tropic of capricorn to the fouth, on the 28th of November, we computed on the 7th of December, that we were abreaft of the island Madagascar.

N 3

Madagafcar. We perceived alfo, feveral figns of land, and faw much red blubber floating on the water. Hence we fteered weft by fouth, to the latitude of  $34\frac{1}{2}^{\circ}$ , and thence due weft, towards the reef of Anguillas.

The foutheast tradewind began to shift in the fouth latitude of 26°, and we met with variable winds, which were, however, very favourable. The compasses shewed the greatest variation of 25° and 26° N.w. between 62° and 50° east longitude; and farther to the west, the variation began gradually to decrease.

On the 21st of December, we observed a change in the colour of the water, from a clear blue, to dark green, and a high fea rolled in from the s.w. These were indications that we were near the reef of Anguillas; and at funset, we founded in seventy fathoms, grey fand with shells.

This reef ftretches out from the continent, as far as 36° fouth latitude, and perhaps farther, but the foundings are, in fome places, thereabouts, two hundred fathoms. By the depth, and the nature of the bottom upon the reef, you may know whether you are

are to the eaftward, or to the weftward of Cape Anguillas. To the eaftward, the ground is hard, and to the weftward, foft, loofe mud, with a much greater depth; fo that having paffed the cape to the weft, you get out of foundings by degrees.

1

The heavy feas, that are occasioned by the ftorms, which are fo frequently met with, on the reef, make it a very dangerous part of the navigation, and the Company have loft, in confequence, many fhips; efpecially of the fecond division, or those that come upon the reef in the months of April and May, at which time the weather is the most stormy. Ships going to the Cape of Good Hope cannot avoid paffing over the reef, in order to be certain of their longitude, and not to overshoot the cape. On account, however, of the danger attending it, orders were given by the Company, in the years 1767 and 1768, for their ships, which paffed here in that time of the year, to haul in upon the outfide of the reef, in order to afcertain their fituation, and rectify their estimation; but on meeting with foundings, then to fland directly fouth, in order to run round the reef, without touch-

N 4

ing

ing at the Cape of Good Hope; but inftead of that, to touch at St. Helena, for refreshment. This mode, however, proved to be attended with worse consequences; and all their ships are accordingly again allowed to touch at the Cape of Good Hope, except the last ship, which refreshes at St. Helena.

On the 23d of December, we had, at noon, a glimple of the land of *Africa*, but foon loft fight of it, nor could we, on account of the haziness of the weather, diftinguish what part of it we had seen.

On the 25th, we faw it again, with a clear sky, in 34° 57' fouth latitude. The land appeared with a deep inlet, or bay, the weft point of which floped down into the fea; and behind it we faw high rugged mountains, fituated far inland. The beach was very low and fandy. To the north, were fome irregular white eminences, refembling chalkhills; and a little more to the eaftward, we faw a hill, forming a regular arch. We could fee land to the westward, from the masthead, appearing like two round hummocks. We law a thick fmoke rifing inland; hence we concluded, that we were before Vleefch, or Flefh Bay.

5

In

In the night, and part of the following day, we had a ftorm from the weftward, with a high fea, which ftrained the fhip very much. This wefterly wind continued till the 20th, when it came round to the s.E. and the next day we ran in fight of Cape des Anguillas, and the fteep headland of *Rio Dolce*. This laft is very remarkable, and fhews like *Portland* Point in the Britifh Channel.

Rectifying our effimation here, we found that fince our laft obfervation, at *Prince's* Ifland, we were 3° 9', or 39 leagues, more to the weftward, than by the fhip's reckoning. At the fame time we faw a large fhip to the northward, which we loft fight of in the evening; we afterwards found that fhe was the Young Lieven, who had left the ftraits of Sunda, in company with us.

The next day, being the 30th of December, we found ourfelves, at funrife, abreaft of Falle Bay, and fleered our courfe for Table Bay. At noon we were in fight of the Lion's Mountain, for which we fleered; and afterwards for Sandbill Point; before, however, we got fo far, we were becalmed under the Lion's-bead, and we could not fleer the fhip, while it blew a ftorm from the foutheaft,

### [ 186 ]

foutheaft, a quarter of a league from us. After having been becalmed about half an hour, we got a breeze, which foon carried us off fhore; but feaching Sandbill Point, it encreafed to fuch a ftiff gale, and was accompanied with fuch violent fqualls, falling down from the mountains, that we found it impoffible to work into the road; and we accordingly refolved to run for Robben, or Seal Ifland, and anchor under it. We caft anchor in the road of this ifland, in fifteen fathoms, fandy bottom, and found lying here the fhip Young Lieven, which had reached the anchorage three hours before us.

### CHAP-

### [ 187 ]

#### CHAPTER VII.

Anchorage in TABLE BAY.—Departure from the CAPE OF GOOD HOPE.—View of ST. HELENA. —Of ASCENSION Island.—The Grafs-fea.—Animalculæ found in the floating Seaweed.—Council beld by the Commodore.—Passage to the West of the Azores.—Narrative of a Woman, who had enlisted as a Soldier.—Meeting with the cruising Frigates off LIZARD Point.—Arrival at the TEXEL.

ON the following day, in the morning, the Company's officer, flationed on the ifland, came on board, and brought refreshments for the crew, confisting of 'twelve sheep and fome vegetables. This is the allowance delivered to every Company's ship, that anchors at the island.

On the 1st of January 1771, the wind veering, in the morning, to the N.W. we weighed anchor, together with the Young *Lieven*, and steered for the road; but when we were about a quarter of a league from the anchoring-ground, the southeast wind burst upon us, over the mountains, so that we were obliged to come to an anchor, in the

Digitized by Google

Low Straw F

the outer road, under the Lion's-tail; and as the wind continued to blow in violent fqualls, we could not reach the inner road before the 3d, on which day we caft anchor there, at ten o'clock, A.M. and we immediately moored our fhip, ftem and ftern, faluting the commodore of the homeward fleet, with eleven guns, which was returned us with the fame number.

We found feven ships of the homeward fleet, lying at anchor here, viz. the Kroonenburg, the Nieuw Rhoon, the Lady Antenetta Conradina, the Cornelia Hillegonda, the Young Samuel, the Young Lieven, and the Ridderkerk.

The Woefduin arrived on the 7th, the Flushing, on the 13th, and the Duinenburg, on the 31st. This last had, fome time before, anchored under Robben Island, but her cable breaking, in a gale of wind, she had been driven out to sea.

After a stay of full five weeks, during which the crews partook of the usual refreshments of the place, fix of the ships belonging to the homeward fleet, one of which was the commodore's, received orders to fail for Holland. These were, the *Kroonenburg*,

Kroonenburg, the Huis ter Mye, the Young Samuel, the Lady Antonetta Conradina, the Flushing, and the Ridderkerk; the Cornelia Hillegonda, had failed on the 10th of January, as forerunner.

On the 7th of February, we received our final difpatches from the governor of the *Cape of Good Hope*, together with orders, to keep in company with the commodore. We, however, lay still, till the 9th, as the violence of the foutheast wind prevented any of the still form weighing till then. On that day we all set fail, and about noon we got out of the bay, and each of the ships faluting the commodore with eleven guns, we steered to the W.N.W.

At funfet, we took our last observation of the land of *Africa*, the *Table Mountain*, bearing s.E. ten leagues off.

The next day, at noon, we changed our course to N.W. by fignal from the commodore, and steered for the latitude of the island of St. Helena.

Our ship was now perfectly tight. The leak, which we had discovered at sea, had been repaired at the Cape. We found under the sheathing, a seam in the ship's side, that was was entirely open, fo that it was a great happinefs that the fheathing was but little damaged; for, if this had been wholly gone, where the feam lay that was open, we fhould have had much difficulty to keep the fhip above water. We did not perceive the leaft leakinefs, during the remainder of the voyage, and were not once obliged to pump, from the Cape to the Channel.

The favourable wind, with which we had left the road of the Cape, foon brought us into the foutheast tradewind; with which we ran in fight of the island St. Helena, on the 26th of February.

This island, which lies in the fouth latitude of 16°, and full 13° east longitude from the meridian of *Teneriffe*, is high, and mountainous, and has a barren appearance, in passing by. The English have taken posfession of it, and established it, for a place of refreshment, for their East-Indiamen. Our ships, likewise, in case of necessity, fometimes touch there.

Lofing fight of St. Helena, the following morning, we continued to fteer N.W. and on the 5th of March, we made the island Afcention, and failed close under it.

The

The latitude of this island is about 8° fouth, and its longitude  $4\frac{1}{4}$ °: it is alfo high and mountainous, yet not fo much fo as *St. Helena*; it is, likewife, fmaller in circumference. It is uninhabited, and perfectly sterile, being almost nothing but a bare rock. It, however, affords fresh water, though the watering-place is difficult of access. The beach abounds in turtles, who lay their eggs in the fand, in order to be hatched by the heat of the fun. The Danes frequently visit this islandy for the fake of procuring a supply of turtle.

We faw, as we failed by, heavy breakers foaming on its east fide, to a confiderable distance from the island.

On the 13th of March, we passed the equator, in the longitude of 356°. The foutheast tradewind failed us in the third degree of north latitude, and ran round to the northeast, with which we pursued our voyage, failing close-hauled by the wind.

As our fhip was the flowest failer of the fleet, we were obliged to carry a prefs of fail, in order to keep up with the others, whereby we split our maintopmast.

On the 31st of March, I lost my second lieutenant,

[ 192 ]

lieutenant, HENRY VERBURG, who had been unfit for duty, by ficknels, from the beginning of December.

On the 2d of April, in the north latitude of 22°, we faw, for the first time, the feaweed, called gulph-weed\*. This feaweed confifts of fmall green bunches, large fields of which are fometimes feen floating on the water; they are mostly disposed in long bands, feparated from each other by narrow intervals, and lying longitudinally in the direction of the which generally blow here, between N.N.E. and E.N.E. It is as yet unknown, whether this weed grows upon the furface of the fea, or whether it is produced at the bottom, and afterwards rifes to the fuperficies +. It is worthy of observation. that it is not found, in fuch large quantities, in any other part of the ocean ; whence, and from its verdant appearance, the fea hereabouts is called the grafs-fea, by the feamen. The depth is here, as elfewhere in the main

\* Fucus natans.

+ Dr. THUNBERG, the lateft fcientific voyager, who fays any thing concerning this marine production, is of opinion, that it grows as it floats in the water, and floots forth' new floots at the extremities, which grow larger by degrees. Thunberg's Travels, vol. iv. p. 276. T.

ocean,

### [ 193 ]

ocean, unfathomable. It is between the latitudes of 21° and 34° north, that this feaweed is mostly met with, decreasing thence daily, in quantity, to 38° or 39°, where it wholly difappears. Neither is any of it feen to the eastward of the Cape Verde or Canary Mands, fo that it must be produced, or collected, far to the westward of these islands. A great number of marine animalculæ, infinitely various in shape, are harboured in this feagrafs: fome of them are as large as the joint of a finger. They are familiarly called feacows, fealions, &cc. in allufion to fuch known land-animals as they refemble the nearest in shape . Their substance is a thick flime, fo that they cannot be preferved, either in spirits, or in any other way.

On the 3d of April, we passed the tropic of cancer, and on the following day, the commodore made the fignal for all the captains of the fleet to come on board.

As foon as we were affembled, which was

\* Dr. THUNBERG enumerates, among the animals which be met with in this feaweed, the *fcyllæa pelagica*, the *cancer* minutus, and the *lepbius biftrie*; and Captain STEDMAN particularizes the *bippscampus*, or feahorfe, which he aptly compares to the chevalier or knight of a chefsboard. T.

**Vol.** 1.

at

at eight o'clock in the morning, we were formed into a council, in which the fecret papers and orders committed to the commodore, at the *Cape of Good Hope*, with directions not to open them, till the fleet was in the prefent latitude, were read. They contained, a defignation of the place, where we were to look out for the fhips of war, which were cruifing to meet us, being the *Lizard* Point in the Channel, and the private fignals of recognizance of them.

After this, we fat in judgment on the crime of one of the crew of the Lady Antonetta Conradina, who, being found guilty of mutiny, was fentenced to be ducked three times from the mainyard, to be feverely flogged before the maft, and afterwards removed to the fhip Flu/hing; which fentence was immediately put in execution.

Having thus concluded our bufinefs, we fpent the remainder of the day in merriment; and at funfet we returned on board of our own fhips, faluting the commodore with eleven guns from each.

Our north latitude, at noon, that day, was 24° 49', and our longitude, by the average computation of all the fhips, 338° 49'.

Digitized by Google

The

The northeaft tradewind left us the following day, and was fucceeded, firft by calms, and afterwards by wefterly and variable winds. Thefe were fometimes pretty high, and occafioned fo great a fwell of the fea, that it at times broke over us. On the 18th and 19th of April especially, we had a high wind and fea, with which we ran past the islands *Corvo* and *Flores*, which are the most westerly of the *Azores*, leaving them, however, out of fight, on our right.

Hitherto, nothing of material confequence had happened on board of my fhip, during the time we had been at iea, which is rather a fingular circumstance in fuch voyages; but on the 2d of May, we met with an unexpected occurrence, which had no relation to the fhip's affairs.

A woman, one MARGARET REYMERS, had difguifed herfelf in men's clothes, in the beginning of the laft year, and had enlifted as a foldier on board of the fhip Schoonzicht; fhe had long kept her fex concealed, but being at laft difcovered, fhe was put on fhore at the Cape of Good Hope, and kept there, in order to be fent back to Holland, by the bomeward fleet. The governor of 02 the

the Cape made choice of my thip for that purpose, as there was a lady on board, who had taken her paffage with me from Batavia for Halland : and whom this woman was to ferve, as a maid, during the voyage. The mistress had hitherto observed nothing amis in her fervant, nor the least figns of pregnancy, till the moment that the heard the crying of a child, the maid being then, as the thought, lying afleep on a cheft in her The furgeon being called, we found room. that the woman had been delivered of a female child; and the mother told him that the father of it, was a furgeon's mate at the Cape of Good Hope. Some days afterwards, I had the curiofity to afk her, what had induced her to go to India as a foldier : fhe answered, that she was a farmer's daughter. in the duchy of Oldenburg, and had left her native country, on account of ill treatment ; that coming to Hamburgh, fhe there met with a Dutch recruiting officer, who advised her to put on male attire, faying, that if the would go to India, which he would affift her to do, she would make her fortune; he, accordingly, conveyed her to Rotter dam, whence the had been put on board of the Ŀ

the Schoonzicht : the had remained unnoticed for two months on board, but at last the first lieutenant discovered her. At the Cape, the had been weak enough, the faid, to liften to the professions of the surgeon's mate. who had feduced her, and who, after repeated promifes of marriage, having got her with child, had abandoned her. She was in the fixth month of her pregnancy, when the came on board, and had hoped that the fhip would have reached its destination before the time of her delivery. She was between twenty-three and twenty-four years of age, tall, and of a large and coarfe make, by which the could eafily pais for a man, in her foldiers' uniform.

Three days after this event, we came into foundings, in the chops of the Channel, ninety fathom; but the violent eafterly winds prevented us from making the Scilly illands till the 11th of May, when we got fight of them, at noon.

At four o'clock, P.M. two Texel pilots came on board of us, and others on board of the other ships of the squadron, bound to the *Texel*.

The next day, at seven o'clock, A.M. we o 3 faw faw the two fhips of war, that were cruifing for us, off *Lizard* Point; and our commodore ftood towards them. About nine o'clock, he made the private fignal of recognizance, which was anfwered by one of the frigates.

When we were within about half a league of them, our commodore faluted with thirteen guns, and struck his flag, but which, as foon as the frigate had returned his falute, he hoifted again. This occasioned much mifunderstanding between the commodore of the homeward fleet, who infifted upon continuing to bear his commodore's flag, and Captain VAN BRAAM, commander of the two trigates, who would not fuffer this, and would only allow the commodore to carry an enfign at the maintop. To this he was at last obliged to fubmit, after we had been detained for five or fix hours during a favourable gale, by the boats going backwards and forwards, in order to bring the commodore to reafon, and to fettle this punctilio.

By our observation at the Lizard Point, we found, that fince our last observation, off the island Afcension, on the 5th of March, we were 4° 32', or 45 leagues, more to the westward, than by computation.

5

At

At funfet, we made fail, in company with both the frigates, steering for the Start Point.

The next morning, the commander made a fignal for all captains of fhips to come on board, when I found that this was our States' frigate the *Thetis*, under the command of Captain WILLIAM VAN BRAAM, and the other, the *Triton*, Captain RADERS, which. laft was to convoy us farther, to the ports to which we were bound.

Being returned on board of our own fhips, Captain VAN BRAAM, made the fignal to feparate, and returned to his cruifing flation off the *Lizard* Point, returning, when he left us, with eleven guns, the falute of thirteen, given by the commodore of the homeward fleet.

While we were lying by, all the fhips of the fleet were examined by two officers of the *Thetis*.

We met with easterly winds and calms in our passage up the Channel, fo that it was only on the 22d of May, that we passed the Straits of *Dover*, and entered the North Sea.

On the following day, the Young Samuel, 04 the the Flushing, and the Lady Antonetta Conradina, separated from us, the first for Zealand, and the two last for Goeree \*.

At nine o'clock, A.M. on the 24th of May, we difcovered the coaft of Holland, and at ten, we faw the fteeple of Egmond. Shortly afterwards the frigate made the fignal for pufhing on. We faluted with eleven guns, and were anfwered with five. We then worked up for the Texel roads, and at five o'clock, F.M. we came to anchor, in the fouth gut, faluting the road with eleven guns; and on the 26th of May, the crew were difcharged by the director BEAUMONT.

### OBSERVATIONS RESPECTING THE ISLAND OF JAVA.

#### CHAPTER I.

Situation of JAVA. -- Straits of SUNDA. -- PRINCE'S Ifland. -- DWARS IN DEN WEG. -- Bay of AN-JER. -- Claim of the Dutch East-India Company to the Sovereignty of the Straits of SUNDA. -- Bay of BANTAM. -- Road of BATAVIA. -- Kingdom of BANTAM. -- Tributary to the Company. -- Speech made on the Appointment of a Succeffor to the Throne. -- Empire of JACCATEA. -- Of CHERI-BON. -- Cf the SQESOEHOENAM, or Emperor of JAVA. -- Of the Sultan. -- Principality of MA-DURA. -- Political Conduct of the Company towards the native Princes.

T HE island of Java, which is one of the largest of those constituting the great Oriental Archipelago, is situated between 6° and 9° south latitude, and extends from 120° to 131° east longitude from Teneriffe, being

being one hundred and fixty-five Dutch miles in length. It lies nearly in the direction of east and west. To the fouth, and to the weft, its fhores are washed by the fouthern Indian Ocean : to the northweft of it. lies the ifland of Sumatra ; to the north. Borneo : to the northeast, Celebes; and to the east that of Bali: from which last it is separated by a narrow passage, called the Straits of Bali. The arm of the fea which runs between Java and Sumatra, is known by the appellation of the Straits of Sunda. The length of this channel, is, on the Sumatra fide, taken from the Flat Point, to Varkens. or Hog Point, fifteen German miles; and, on the Java fide, from the first point, or Java Head, to the point of Bantam, full twenty. In the mouth of the ftrait, lies Prince's Island, about a league and a half from the coaft of Java, and full fix leagues from that of Sumatra.

Prince's Ifland, is low, and only about four leagues in circumference. It has, however, two hills, one at its eaft end, and the other a little more to the fouth, which make it visible at a moderate distance, especially the hill, which lies at the east end, and which is is accordingly called the high hill, by navigators \*.

There is a ftone reef at its s.w. fide, which, according to the charts, extends a league and a half out to fea, and is dangerous for the fhips which pafs through the paffage between this ifland and *Java*. *Prince*'s Ifland is covered with trees, and affords an agreeable prospect to the paffing feamen: it is inhabited by Javanese, who fublish by fishing.

By the fituation of this ifland, at the entrance of the ftraits of Sunda, are formed two paffages; the one, running between Prince's Ifland and Java, has been called the Behouden, or Secured Paffage, and is made use of, for the most part, by those ships which have to pass the straits, during the foutheast monsoon, in order, that, failing close in with the shore of Java, they may soon get within anchoring-depth, and not be in danger of being driven out to sea again, by the currents, which at that time of the

\* The English call it the Pike: in Lieut. Cook's voyage in the *Endeavour*, there is a more ample account of this island. T.

year,

year, fet strongly out of the straits, to the westward.

The other paffage, which is called by feamen, bet Groote Gat, or the Great Channel, fometimes ferves also as an entrance to the ftraits, during the foutheast monsoon; but it is with the greatest difficulty, and after a continued struggling with the foutheasterly winds, and the currents, that this can be effected; and it is not an unfrequent circumstance that five or fix weeks are spent, in working up a distance, which, in the west monsoon, is often failed over, in twice as many hours.

The East-India Company's ship, Luxemburg, Captain ROEM, affords an instance hereof: she failed on the 2d of June, 1768, from the bay of Punto Gallo, and came in sight of the Flat Point of Sumatra, at the entrance of the straits, on the 24th of July, but could not get upon the anchoringground, under the shore of Java, till the 21st of November. It was, however, remarkable, that the ship Torenvliet, which failed in company with the Luxemburg, from Punto Gallo, reached Batavia, full three months before her; and hence appears how much much fometimes one ship is either a better failer, or has better fortune than another, though feamanship and knowledge be upon an equal footing.

Notwithstanding the difficulty of entering the straits on this fide, when these contrary winds and currents are in force, yet almost all the ships which fall to leeward. upon the west coast of Sumatra, as well as those which come from Surat. Malabar. Ceylon, Coromandel, Bengal, or other places in the weft of India, are obliged to pafs through this channel, as it is scarcely poffible for them to reach the windward those of Java, in the teeth of the foutheast monfoon, and they therefore cannot avail of the other paffage. That this, however, is not wholly impracticable, appeared by the thips, the Young Lieven, and the Aha, who in the month of June, 1770, effected it; yet such cafes are extremely rare.

The ontrance of the firaits, on this fide, affords an uncommonly pleaking prospect, near the Sumatran shore. First, the Flat Point, which is low, and covered with trees, and behind it the majestic mountains of Sumatra, rising with a gradual ascent, and reaching reaching to the clouds; a little more forward, the Keizers, or Emperor's Ifland, lifts its high and fpiry fummit; farther on, the iflands Kraketau, Slybzee, and Pulo Bicie, or the Iron Ifland, fhew their mountains covered with ever-verdant woods. The oppofite coaft of Java is not inferior to this, and improves continually in appearance, as you pafs along it, affording at the fame time good anchorage, which is not to be met with on the Sumatra fide. The numerous groves of cocoanut-palms, and the rice-fields in the background, give the most pleasing ideas of the fertility of the foil.

Twelve or thirteen leagues from *Prince's* Ifland, in the narroweft part of the ftrait, and opposite to *Varkens*, or *Hog* Point of *Sumatra*, lies an island, that, on account of its fituation, exactly in the middle of the channel, has, with great propriety, obtained the name of *Dwars in den Weg*, *Thwart the Way*, or *Middle Isle*. It is low, and of little extent, with fome fmall reefs, which ftretch out from it here and there. Like all the islands in these feas, it is covered with wood, and, as far as I know, it is uninhabited.

A & rong

A ftrong current runs through the paffages on either fide of this island, during the whole year, fetting, with the prevailing easterly or westerly winds, either to the northeast or to the southwest, although it fometimes happens, that the current runs contrary to the direction of the wind, for a short time. Between Dwars in den Weg and the coast of Java, and farther on to the point of Bantam, there appears to be a fettled current, independent of the wind; at least I found, when, in the month of June, coming from Bengal, with the ship Cornelia Hillegonda, I lay at anchor, for a day and a half, in the bay of Anjer, over against Dwars in den Weg, that the current changed its course to a contrary direction, twice in four-andtwenty hours; that, however, which flowed towards the ftraits, was full as ftrong again, as that which fet the opposite way : the s.E. monfoon was then at its height. I experienced the fame thing in the month of No-. vember of the fame year, with the ship Huis ter Mye, though it was then in the latter end of the monfoon.

Ships paffing out through the straits of Sunda,

Sunda, often anchor in the bay of Anjer, in order to take in their laft fupply of fresh water, from a rivulet which runs from the mountains into the sea, at this place, close to a little grove of cocoanut-trees. There is likewise a Javanese village, which is under the jurisdiction of the king of Bantam, and which has erroneously been reckoned, by some travellers, among the large cities of Java, though it has nothing that can be construed into a town.

Not far from this place, there is an iflet or rock, entirely overgrown with brufhwood, which is called the *Brabandfcb-boedje*; and a little farther to the north, a fimilar one, called the *Toppers-boedje*\*; this laft is fteep and bold, having fifty fathom depth clofe to it.

The Dutch East-India Company claim an absolute fovereignty over the Straits of Sunda, and this is acknowledged by all the other powers. The Company require the falute, and have the right of interdicting this passage to all other nations, though they

\* These small islands are called the Cop and Button, by the English navigators. T.

do

do not put their right in force \*. This right is maintained as proceeding from the circumstance, that the land on both fides of the straits is tributary to the Company ; viz. the kingdom of Bantam on the Java shore, and on the other fide the land of Lampon. with that which lies farther westward, being conquered provinces belonging to Bantam. There is a refolution, on this subject. of the council of India, and articles are included in the fecret orders, which are given to the Company's ships, bound to the west of India. respecting the falute to be required of the fhips of other nations; which order is not to be opened, unless they chance to meet with fuch.

From Anjer to the point of Bantam, the country appears, in general, with high mountains inland, and a foreland more level. From this point, which is the northernmost extremity of Java, the land declines to the muthcast, and makes a deep bay; and in

\* This claim has never been openly made by the Dutch, except indeed their putting fundry queffions to all firange faips who pafs the firaits, as circumfantially related in Cook's voyage in the *Endeavour*, may be confirued into fuch a claim; and it would probably not be allowed, by the other nations who trade to Indian if infifted upon. T.

vol. L

the

the farthoft part of the bight is fituate the oity of *Bantam*, of which I have already made forme mention, and shall fay more respecting it hereafter.

From the point of *Pontang*, which forms the eaftern extremity of the bay of *Bantam*, as that which we have just mentioned does the western, the land is every where very low; yet there are high mountains inland, among which the Blue mountain towers above the rest. Although this mountain lies at a great distance, towards the south fide of the island, and southeast from *Batavia*, yet it is seen before *Bantam*. It was formerly, as is related, a volcano; but nothing of this kind is at present perceivable.

The navigation from this place to the road of *Batavia*, affords the moft agreeable prospects, by the numerous small islands; covered with perpetual verdure, which are frewed, at it were, along the fea. The anchoring-ground is every where very good but there are many rocks, which are from ten to eighteen feet under water, and which sometimes occasion much damage to the vessels that do not carefully avoid them. The government of *Batavia*, however, have caused cauled buoys to be placed upon them, moored by heavy anchors; and upon fome of them beacons are erected : but when these are washed away by the currents, the navigator must avoid the rocks, by taking the bearings of the feveral islands.

The road of Batavia is justly effected one of the best in the world, as well with regard to the anchoring-ground, which confifts of a foft clay, as with regard to the fafety it affords to the fhips which anchor in it. and to the number which it can contain. Although the road is open from the N.W. to E.N.E. and east, yet ships lie as fecure and quiet as if they were landlocked, on account of the numerous iflands which lie on that fide, and break the force of the Ships, therefore, are never obliged waves. to moor ftem and ftern here: and the current which runs within the islands is not ftrong, but without them it is very violent. In the road, nearest to the town, lies a guardinip, commonly called the admiralthip, with an enfign at the top, from which, both in the day and in the night, fuch fignals are made to the other fhips in the road, as the commanding officer shall think needful.

P 2

. .

ful. For feveral years paft, it has been regulated, that one of the captains of the fhips in the road, fhould keep guard on board this fhip, in order that, in cafe of accident, by fire or otherwife, there may be always fomebody at hand, to give the neceffary directions, as the other captains of the veffels generally pafs the night in the city. On fuch occafions, a fignal is made from the admiral-fhip, to give information, in order that the neceffary affiftance be immediately fent from the fhore.

Before I fay any thing of *Batavia*, it will not be improper to relate how far the power of the East-India Company extends over the whole island of  $\Im ava$ . This is divided into four empires, or kingdoms, which are, either wholly or in part, subject to the dominion of the Company.

The first, to begin from the west, is the kingdom of *Bantam*; this is governed by its own kings, with full power of life and death over their subjects; yet they are tributary to the Company, paying a yearly acknowledgment of a hundred *bbars* of pepper, or 37,500 pounds weight, Beside which, there is a strict engagement entered into

into by the king, not to fell any pepper, or any thing elfe of the produce of his country. to other nations. It must all be delivered to the Company, for a certain stipulated price. And this does not folely regard the pepper, produced in his dominions in Java, but likewife all that is grown in his other territories, his conquered provinces, fituated in the great island of Borneo, and in Sumatra, which likewife yield much pepper; and the Company have accordingly refidencies established, in the first, at Banjermassing, and in the last, at Lampon Toulabourna, which ferve, in the fame way as Fort Speelwyk does at Bantam, to enforce the fulfilment of the treaties, and to prevent a contraband trade.

The king of *Bantam* is also deprived of the power of appointing his own fuccessor, and the Company nominate one of the royal family to succeed him, as latterly took place in the year 1767.

The speech made, on that occasion, by Mr. OSSENBERG, ordinary counsellor of India, who was deputed thither from *Batavia*, to represent the united Dutch East-India Company, as lord paramount, appeared to me,

from

from its peculiarity, well worthy of being literally inferted in this place, as translated out of the Malay, which was the language in which it was delivered, as follows:

"His excellency the governor general, # and the honourable the council of India, " having thought fit and refolved, to appoint "me, as their commissary plenipotentiary " to the court of Bantam, in order, at the " request of the king, to propose and ap-" point, his majefty's eldeft fon Pangorang " (prince) GUSTI, as hereditary prince, and "fucceffor to the empire of Bantam; and, " this defirable period being now arrived, " in confequence, I, the commiflary afore-" faid, in the name and behalf of the ge-" neral East-India Company of the Nether-" lands, appoint the faid pangorang, to be " pangorang ratoo, or hereditary prince, and heir to the crown and the whole " empire of Bantam, by the title of ABDUL " MOFAGIR MOHAMED ALI JOUDEEN.

"The commiffary expects, that the faid "pangorang ratoo will, at all times, con-"fider this, his important promotion, as a "peculiar favour, and a great benefit con-"ferred upon him by the honourable Com-"pany;

" pany; being adopted from this moment, as " the grandfon of the East-India Company of "the Netherlands : and that he will hence-" forward, on all occasions, and in all times, " behave with integrity and gratitude to-" wards them, obeying the commands of the " honourable Company, and of the king his " father, during his whole life."

After the appointment, this harangue was again read, by order of the commiffary. in the Malay language, in the prefence of the king his father, of all the grandees of his court, and a number of the Company's fervants, who had come from Batavia, and belonged to the retinue of the commission; and the ceremony concluded with the playing of gomgoms, and other demonstrations of joy.

The fecond empire in Java, is that of Yactatra, which is bounded, to the east, by that of Cheribon, and to the west, by the kingdom of Bantam. Jaccatra was formerly governed by its own kings, but the last of these, having been subdued by the arms of the Company in the year 1619, they have ever fince posses it, by the right of conquest, as sovereigns. It is under the immediate government of the governor general. neral, and the council of India, and all the Javanese of *faccatra*, are therefore born the Company's subjects. Before this revolution, *faccatra* was the capital of the empire, but *Batavia*, which is built very near the former, is now the chief place.

The third empire, is that of *Cheribon*. This is at prefent under the dominion of three different princes, who are independent of the Company, and fovereigns in their refpective diffricts. Yet they are their allies, and, in the fame manner as the king of *Bantam*, they are bound, by treaty, to fell all the produce of their territories, exclusively to the Company, and not to permit any other nation than the Dutch, to enter their dominions; for the due maintenance of which conditions, the Company likewife take care to guard and garrifon their feaports.

These princes would be the only ones in Java, who possesses price of the only nominal, but also real fovereignty, were it not for the situation of their dominions, which lie between Jaccatra, and the empire of the Soefoeboenam, or emperor of Java, who is also a dependant on the Company; of whom they must of course stand in awe, and whose withes

wifnes they must in every respect observe; for if they do not, the Company make no scruple of dethroning one prince, and establishing another in his stead.

The Company exercised their power in this respect, in the commencement of the year 1769. One of these *Cheribon* princes, not treating his subjects well, was put under arrest, by orders from the council of India, and banished to the castle *Victoria*, in the island of *Amboyna*; while another prince of the blood was elevated to the vacant dignity, upon the condition, however, of his furnishing a certain annual sum of money, for the support of his imprisoned predecessor.

The fourth empire, is that of the Soefoeboenam, or emperor of Java, which is often called Soefoeboenam Mataram, from the place of his refidence. This empire, comprehended, of old, the greatest part of the island: that of *Cheribon*, once formed part of it, and it was then very powerful; but, fince our nation has been established here, it has less much of its lustre and importance. Yet it remained undivided till about the middle of the prefent century, when the emperor, found himfelf felf fo much embarassed, in consequence of the rebellion of. MANKO BOENI, a prince of the blood, that he made a ceffion of his territories to the Company, who, in return, granted him the half back again as their vaffal, and promised him their protection, engaging at the fame time, never to make any one emperor of Java, who was not a prince of the imperial family.

The empire being thus split into two parts, the other half, was, in the fame manner, given to MANKO BOENI, as the Company's vassal, under the title of Sultan, with the like promise of protection, and the like engagement never to nominate any other than princes of his family, as successfors to his dignity. This other half, therefore, constitutes the fifth empire of Java.

To these may be added a fixth, though it does not properly belong to Java; being a separate island, but close to it. I mean the island and principality of Madura, which is divided from Java, by a narrow strait. It is under the government of a prince, who is equally a vassal of the Company, who, on this account, also dispose respecting the fuccession.

All

All these princes are under engagements (as has already been noticed with respect to Bantam, and to Cheribon), to deliver the produce of their respective countries to the Company alone, and not to fell any of it to any other nation; likewise, not to enter into any connections, or treaties, with other powers; and great care is taken, to enforce these conditions, by the Company, whose numerous forts and garrisons, along the whole north coast of Java, render the contravention of them extremely difficult, if not wholly impossible, to the native princes.

Were they, however, all to unite againft the Company, the latter would be in a very difagreeable predicament; but their mutual and unceafing jealoufies and animofities, are fafeguards againft this. Though the Company's government do not perhaps foment, yet they do not extinguifh the flames of difcord; which being always kept fmouldering, make one native prince prevent whatever another may defign againft the Company, by giving them immediate advice thereof.

It was likewife for very folid political reafons,

reasons, that the empire of Java, was allowed, or rather contrived, to be divided into two states; for such an extent of territory as it formerly comprehended, would always have made whoever was its sole master, a dangerous neighbour to the Company, whereas being now under the dominion of two different men, who are likewise irreconcileable enemies, it is casily kept in entire fubjection.

## CHAPTER

## [ 221 ]

## CHAPTER II.

Situation of JAVA. — Climate. — Land and Sea Winds. — Monsons. — Tbunderstorms. — Rivers. — Productions. — Pepper. — Rice. — Sugar. — Coffee. — Cotton-Yarn. — Salt. — Indigo. — Timber. — Fruits. — Vast Variety of them. — The Natives. — Their Character. — Dress. — Customs. — Dwellings. — Food. — Diversions. — Religion. — Physicians. — Ágriculture.

JAVA is fituated, as we have before obferved, to the fouth of the equator, in a climate, which was thought uninhabitable by the ancients, on account of the fcorching heat, which they believed rendered the land there fo arid and barren, as to be unable to produce any thing for the fubliftence of man. This opinion originated from their total ignorance respecting the interior parts of Africa, which lie between the tropics, as well as respecting the Indies, and the great peninfula beyond the Ganges. The improvements of navigation, in modern times, have exploded this error, and proved that the lands near the equinoctial, far from being .5

being infertile and uninhabited, on the contrary, yield the palm in nothing, to lefs torrid regions, and are able to feed full as many inhabitants, as the most fertile country in the temperate climates, provided the land be but properly cultivated.

The idea, that the heat must be utterly insupportable in these parts, is not so absurd. for the fun is twice a year vertically over them, and its rays shoot almost always in a perpendicular line; fo that it would, for certain, be nearly as bad as was supposed, if Nature herfelf did not come to their affiftance, by the refreshing land and sea-breezes, which blow here alternately, throughout the year, and fo far moderate the heat, as to make it bearable by most men. As the rising and setting of the sun, is likewise always nearly at the fame hour, and fcarcely differing more than a few minutes, the long nights confequently cool the air fo much, that in the morning, for an hour or two before daybreak, it may be rather faid to be cold than warm, especially for fuch people as have refided here for fome time.

From the month of July to November, which was the time of my last stay at Bata-.

via,

Digitized by Google

I

via, the thermometer of Fahrenheit was always, in the hotteft part of the day, between 84° and 90°, excepting only one day, when it role to 92°; and in the greateft degree of coolnels in the morning, it was feldom lower than 76°. This thermometer was placed in the open air, in the city, fhaded both from the rays of the fun, and from their reflection.

The barometer undergoes little or no variation, and stands for a whole year at twenty-nine inches ten lines, as I was informed by the Rev. Mr. MOHR, who made daily annotations thereof.

The warmth of the air decreafes greatly, on approaching the mountains, which lie towards the fouthern parts of the island. Credible people have affured me, that at the country-feat of the governor general, which is called *Buitenzorg* (rural care), and is fituated full fixteen Dutch miles fouth from *Batavia*, at the foot of the Blue mountains, the cold is fo great in the morning, that not only thick clothes are requifite, but it is difficult to become warm even with them \*.

The

\*. Dr. THUNBERG, who visited both Buitenzorg and the Blue mountains, fays, that the climate there was very healthy and

The land and fea-winds, of which montion has already been made, blow here every day, without exception. The fea-breeze. which, in the east monfoon is generally confined between B.N.E. and north. but in the west monsoon runs as far as N.W. and farther. begins to blow, about eleven or twelve o'clock in the forenoon. It encreases in the afternoon by degrees, till the evening, and then dies gradually away, till about eight or nine o'clock, it is perfectly calm. The land-wind then begins at midnight, or just before, and continues till an hour or two after funrife, when it generally again falls calm, till the fea-breeze comes on at its accufformed hour.

The year is divided into two feafons, one of which is called the *eaft monfoon*\*, or dry

and refreshing, and the air, especially in the morning and evening, not only cool, but absolutely cold, infomuch, that, not having brought a great-coat with him, he was "chilled, " and perfectly shivered with the cold evening air, in a coun-" try, that lies almost directly under the equator." T.

\* The word monfoon (in Dutch, manfon), is derived from mouffin, which, in the Malay language, fignifies feafon. See VALENTYN befebryving van Ooft-Indie, vol. ii, p. 136.

Mr. MARSDEN, in his Hiftory of Sumatra, page 13, fays, that the word moefferm, of which the term monfeon appears to be a corruption, fignifies a year, both in Arabic, and in Malay. T: fcafon,

feason, and the other the west monstoon, or tainy season.

The eaft, or good monfoon (goede mouffon), commences in the months of April and May, and ends in the latter end of September, or the beginning of October. The tradewinds then blow, about four or five leagues off fhore, and through the whole of the Indian feas, to the fouth of the line, from the s.E. and E.S.E. at times, however, running as far as s.s.E. with fine dry weather, and a clear fky.

The weft, or bad monfoon (kwaade mouffon), generally begins in the latter end of November, or the beginning of December. The wind then often blows with great violence, and is accompanied by heavy torrents of rain, which render this feafon very unhealthy, and a time of the greatest mortality. The fame winds are likewife found to prevail every where to the fouth of the line. They continue till the latter end of February, or the beginning of March, and then are very variable, till April; in which month, as I was informed, the eafterly winds begin to blow: hence thefe months, as likewife October and part of November, VOL. I. are Q

are called the fhifting months; and these times of the breaking up of the monsons, are esteemed, at *Batavia*, the most unhealthy of all.

It is very remarkable, that when the wefterly winds blow as far as nine or ten degrees to the fouth of the line, the contrary takes place, at the fame time, and to the fame diffance, to the north of it; and vice verfa, when the wefterly winds prevail to the north, the eafterly winds blow to the fouth of the line; which alternation is greatly helpful to the navigation weftward of  $\forall ava$ .

For fome years paft, it has been obferved at *Batavia*, that the commencement of the monfoons begins to be very uncertain, fo that, neither their beginning, nor their end, can be depended upon, with fo much certainty, as formerly; the caufe of which has not hitherto been difcovered.

Thunderstorms are very frequent at *Bata*via, especially towards the conclusion of the monsons, when they occur almost every evening. They, however, mostly pass away without doing any damage. I have noticed in my journal the only two times, during my

my refidence there, that they did any; the one, in the month of August, 1769, when I was at the island Onrust, where the lightning fell upon the powder-magazine, wholly destroying the tiled roof, while it fortunately happened, that there was no powder, at that time, in the magazine; the other, when it struck the ship, the Admiral de Ruiter, in October, 1770; both which accidents were however unaccompanied by the destruction of any person.

To the beft of my knowledge, there are no large rivers in *Java*, navigable by veffels of even a moderate burden, but there are many fmall ones, which flowing down from the mountains, in a northerly direction, run into the fea, all along the north coaft; they are, however, moftly choaked up at the mouth, by fands, or mudbanks, which render their entrances, at low water, very difficult to the fmalleft veffels.

On the bank, or bar, before *Batavia*, the flood rifes about fix feet, though at fpringtides, as every where, it is more. High and low water, likewife, only occur once in fourand-twenty hours.

The productions which the ifland yields,  $Q_2$  are

are confiderable, and of great importance to the Company; more particularly for the laft thirty years, in which period, the cultivation of coffee, and other articles, has been affiduoufly profecuted and encouraged.

The chief produce is pepper, which is mostly grown in the western part of the island. This spice is produced from a plant \* of the vine kind, which twines its tendrils round poles, or trees, like ivy or hops. The pepper corns grow in bunches, clofe to each other. They are first green, but afterwards turn black. When dried, they are first separated from the dust, and partly from the outward membranous coat, by means of a kind of winnow, called a barp, and then laid up in warehouses. This winnow, or barp, is an oblong frame, with a bottom of iron wire, closely twifted, fo that the peppercorns cannot pass through it; this is set floping, and the ungarbled pepper rolling along it, frees itfelf from most of its impurities.

The empire of *Bantam*, with its dependencies at *Lampon*, yield annually to the

> \* Piper nigrum. Company,

Company, more than fix millions of pounds of this fpice. This pepper is efteemed the next best to that which comes from the coast of *Malabar*. That from *Palembang*, of which likewise a very considerable quantity is delivered to the Company, as well as that of *Borneo*, is of a much inferior quality \*.

The price, for which the king of *Bantam* is obliged to fell all the pepper, produced in his dominions, is fixed at fix rixdollars, or fourteen gilders and eight flivers per picol, of one hundred and twenty-five pounds +.

It has been the opinion of many, that the white pepper, is the fruit of a plant, diftinct from that which produces the black; this, however, is not the cafe; they are both the fame production; but the white is manufactured, by being laid in lime, which takes off its outer coat, and renders it

\* See the exact quantities of the imports of pepper at Batavia, for one year, from all these places, in book iv, chap. 1, of Mr. STAVORINUS'S second voyage. T.

+ Equal to about twenty-two fhillings fterling per hundred weight English, or nearly twopence halfpenny per pound, T.

Q.3

whitish.

whitifh. This is done before the pepper is perfectly dry.

Rice \* is the fecond product of Yava, and is collected in large quantities, efpecially in the empire of Fava proper. It grows chiefly in low, fenny ground. After it has been fown, and has fhot up, about two or three handbreadths, above the ground, it is transplanted by little bundles, of fix or more plants, in rows; then by the damming up of the many rivulets, which abound in this country, the rice is inundated, in the rainy feason, and kept under water, till the stalks have attained fufficient ftrength; when the land is drained, by opening the dams, and it is foon dried, by the great heat of the fun.

At the time of the rice-harvest, the fields have much the same appearance, as our wheat and barley-fields, and afford an equally rich scene of golden uniformity.

The fickle is not used in reaping the rice, but inftead of it a fmall knife, with which the stalk is cut, about a foot under the ear; this is done, one by one, and they are then

\* Oryza fativa.

bound

bound into fheaves, the tenth of which is the reward of the mower.

The *paddee*, which is the name given to the rice, whilft in the hufk \*, does not grow, like wheat and barley, in compact ears, but like oats, in loofe fpikes. It is not threfhed, to feparate it from the hufk, but ftamped in large wooden blocks, hollowed out; and the more it is ftamped, the whiter it becomes when boiled. The native Indians, throughout the eaft, ufe this grain as bread, and as their principal food.

Java has been called the granary of the east, on account of the immense quantity of rice which it produces. The other islands in this neighbourhood, yield little or none, except *Celebes*, where enough is grown to provide likewise *Amboyna* with this staff of life.

In the year 1767, the quantity of seven thousand lasts, or thirty-one millions of

\* The following, belides many others, are names applied to rice, in its different ftages of growth and preparation: *paddce*, original name of the feed : ooffay, grain of laft feason; *bunnee*, the rice-plants before transplantation; *bras*, or *bray*, rice ftripped of its husk; *charroop*, rice cleaned for boiling; *maffee*, boiled rice, &c. T.

Q4

pounds

pounds of rice \*, was required, and furnifhed, for the confumption of *Batavia*, *Ceylon*, and *Banda*, from the ifland of *Java*.

Sugar is likewife an article, which is produced in large quantities in Java, and brought to Batavia. The quantity of thirteen millions of pounds, manufactured in the year 1768 in the province of Jacatra alone, is fufficient to shew, with what luxuriance the sugarcane + flourishes here. Much of it is exported to the west of India, to Surat and the coast of Malabar, and the rest to Europe. Most of the sugarmills are kept and worked by Chinese.

A fourth production of the ifland, is coffee. The plantations of it are, however, peculiarly confined to the provinces of *Cheribon* and *Jaccatra*. The tree  $\ddagger$  which produces this berry, was first introduced into *Java* in 1722, or 1723, under the government of the governor general ZWAARDE-KROON, who greatly encouraged the cultivation of it, among the Javanefe. It is at

- + Saccharum officinarum.
- \$ Coffee.

prefent

<sup>\* 14,000</sup> tons, or 280,000 cwt. T.

prefent fo much multiplied, that in the year 1768, Jaccatra furnished 4,465,500 pounds weight to the Company, who paid no more, according to the best of my knowledge, than three rixdollars and a half, or eight gilders eight stivers, per picol of a hundred and twenty-five pounds \*.

Cotton-yarn, is likewise an important object of trade, which Java furnishes to the Company. It is spun by the Javanese, from the cotton which is produced, in great plenty, in the interior parts. The province of Jaccatra yielded, in 1768, no more than 133 picols, or 16,225 pounds, which was 1875 pounds less than ought to have been delivered by the Indians, according to the quota imposed upon them; but this deficiency was occasioned by a season of uncommon drought, by which the cotton-crop had been materially injured.

\* Mr. STAVORINUS corrects this flatement, with respect to the price. in his fecond voyage, where he informs us, that the rate at which the Company paid for the coffee, was four rixdollars per picol, being equal to about 14s. 5d. fterling per swt.; but other accounts, make this article fland them in the fame proportion as the pepper, twopence halfpenny per pound, or about 1*l.* 2s. per cwt.: the first is probably what is paid to the cultivators, and the last the invoice-value, being with the addition of the charges. T.

Salt,

Salt, much of which is brought from *Rembang* to *Batavia*, is equally an article of trade for the company, who difpofe of it, for a handfome profit, at *Sumatra*'s weft coaft.

Another product of the country, is indigo, which is mostly shipped to Europe. The culture of the plant which produces this dye \*, is profecuted with vigour in the province of *Jaccatra*. In the year 1768, the natives were affested at 6, 125 pounds, though they only furnished 2,875 pounds.

Large quantities of heavy timber are alfo brought from the northeast coast of Java, to Batavia. This is not, in reality, a branch of trade for the Company; but it is of great importance for ship-building, and other purposes +.

From all this, the great importance of this island to the Company, is very apparent. It produces fome of their most confiderable articles of commerce, and provides the greatest part of their Indian possession with food,

\* Indigofera tinctoria.

? See the more ample account given of the articles of trade of Java, in book iv, chap. 1, of Mr. STAV. RINUS'S fecond voyage. T.

not

not to fay any thing of the last mentioned advantage, of furnishing materials for shipbuilding.

The island is extremely abundant in fruitbearing trees. In the first place, there is the cocoanut-palm \*, which is well known. The Suri tree, which yields the palmwine, or toddy. China-oranges +, of which there are two forts, one of a large, and the other of a fmaller fize. The tamarindtree ‡, whofe fruit confists in pods, containing the tamarind, a spungy substance, in which the beans or stones are inclosed. The pompelmoes, or standock ||, the fruit of which is one of the most wholesome, on account of its refreshing quality and taste.

Next the *durioon*, or *drioon*-tree §, the fruit

\* Cocos nucifera.

+ Citvus aurantium.

t Tamarindus indiça.

|| Citrus decumanus; the fluiddock is a large lemon, of the fize of a child's head; the juice is moderately acid, and quenches thirft; it is cooling, antifeptic and antifcorbutic. T.

§ The botanical rank of the *durioon*, though it is particularly noticed in Cook's voyage in the *Endeavour*, as well as by Dr. THUNBERG, feems not to have been yet afcertained; the following account of the tree which produces it, from MARSDEN, may perhaps be helpful to the botanist: "The fruit of which is inclosed in a hard shell, of the fize of a man's head, and fometimes larger; it has a most difagreeable smell, which is extremely offensive to those who have never eat of it; when once, however, the fruit is tasted, the loathing which its odour is apt to excite, is quickly overcome, and use makes it, in the end, so familiar, that it is generally preferred beyond all other fruits. It is a strong stimulative, and is therefore much prized by the Chinese, The Surfak-tree \* has a fruit of a similar kind with the durison, but it is not accompanied by such a fetid state.

The

" The tree is large and lofty; the leaves are finall in proportion, but in themfelves long and pointed. The blofforms grow in clufters, on the ftem and larger branches. The petals are five, of a yellowifh white, furrounding five bunches of ftamina, each bunch containing about twelve, and each ftamen having four antheræ. The pointal is knobbed at top. When the ftamina and petals fall, the maplement refembles a fungus, and is nearly the fhape of a Scotch-bonnet. The fruit is not unlike the breadfruit, but larger and rougher on the outfide." It has by fome been confounded with the breadfruit. Dr. THUNBERG fays, it is confidered as diuretic, and fudorific, and ferviceable in expelling wind. T.

\* This feems to be the nanca, or jakes of Cook, and the boa manca (radcrmacbia) of THUNBERG; or what is commonly called

The mango-tree \* deferves equally to be noticed; its fruit, when ripe, has a thin. oblong shape, and is about the fize of a goofe's egg. Its coat is not thick, of a yellow colour, and foft. When peeled, it has a fleshy substance. Within, it is of an orange colour, like a melon, with which its flavour has likewife fome analogy; but if the mango be a good one, it is much more delicious. In the centre, is a large kernel. When green, it is made into attviar +; for this, the kernel is taken out, and the fpace filled up with ginger, pimento, and other fpicy ingredients, after which it is pickled in vinegar, and is fent to all parts, as prefents, or otherwife.

called the jack, by the Englifh; at *Batavia*, it is generally of the fize of a large melon: its fmell fomewhat refembles that of mellow apples, mixed with garlic; the outer cost is covered with angular prickles, and contains a number of feeds, or kernels (which, when roafted, eat like chefnuts) inclofed in a flefhy fubftance, of a rich, but to ftrangers, too ftrong a flavour, but which gains upon the tafte. T.

\* Mangifera indica.

+ Articles preferved in vinegar, with pepper and other fpices, are called *attjar*; befides mangos, the rind of melons, cucumbers, and in particular the aromatic roots of the bamboo-tree, with various other roots, fruits and vegetables, are made into *attjar*. T.

5

The

The mango-tanges, or mangosteen \*, is effeemed the most delicicous fruit that is produced in the Indies. It is generally of the fize of an apple, and refembles a pomegranate in appearance, only it is larger ' and thicker, and its coat is not fo tough. The fruit, when ftripped of the outward rind, appears like a little apple, of a fnow-white hue, composed of fix or feven lobes, of the fize of a joint of a finger, having a black ftone in the infide; they are very foft and juicy, and their flavour is fo delightfully refreshing that it is indescribable. The taste feemed to me, to approach the nearest to that of the peach; but it is rather more mellow to the tafte. The tree which produces it, is about the fize of a common plum-tree. I met with people, who affured me, they had been cured of a dysentery of long standing, by eating large quantities of this fruit; though others were of opinion, that it produced a contrary effect. The rind has a ftrong aftringent power, and might perhaps be used as a dye, for a fine deep red colour +.

\* Garcinia manganefta.

+ The Chinese use the rind of the mangosleen for dying black. T.

Lemon

Digitized by Google

Lemon \* and lime-trees, are here likewife in great plenty. There is alfo a certain fruit called *katappa* +, which is like our walnuts, but better tafted. It grows upon a high tree, which affords an agreeable fhade, and is inclosed in a green husk, in which it lies in rolls, and is as white as milk.

Pineapples ‡, are produced in large quanties, and are therefore little effected at *Batavia*; they are generally fold for the value of a fliver (penny) apiece, and fometimes for lefs.

Befides these, there are many other kinds of fruit, produced upon the island, which are too numerous for me to mention here ||.

The

- \* Citrus medica.
- + Terminalia catappa.
- : Bromelia ananas.

|| The fruits most worthy of remark, befides the above, are the following: the *pi/ang*, or bananas (*mufa paradifiaca*) of which there are feveral forts, the beft, *pi/ang radja*, is a delicious and wholefome fruit, with a thin coat, and an inner pulpy part, which is fweetifh, and fornewhat mealy; it is eaten both raw, and dreffed in various ways. The *jamboo* (*eugenia malaccenfis*), which is of a deep red colour, and oval fhape; the largeft are not bigger than a fmall apple; it is pleafapt and cooling, though it has not much flavour. The *jamboo*. The native inhabitants, are all commonly called *Javanefe*, whether they belong to the kingdom

(eugenia jambos), which both fmells jamboo-eyer-mauer and taftes like conferve of rofes. The papaya (carica rapaya), which is as large as a fmall melon, and the vellow pulp within, has nearly the fame tafte. The fweetfop (annona (quamo/a), which confifts of a mais of large kernels, from which the furrounding pulp, which is very fweet, and of a mealy nature, is fucked. The cuftardapple (annona reticulata), which derives its English name from the likenefs which its white and rich pulp bears to a cuftard. The rambutan (nepbelium lappaceum), which grows in large clusters, and very much refembles a chefnut, with the hufk on; the estable part is fmall in quantity, but its acid is rich and pleafant, and perhaps more agreeable than any other in the whole vegetable kingdom. The bilimbing (averrbea belimbi), the bilimbing biff (averrhoa carambola), and the cherimelle (averrhoa acid.), which are three species of one genus, and though they differ in fhape, are nearly the fame in tafte; the first is oblong, of the thickness of a finger, and fo four, that it cannot be eaten alone ; the bilimbing beffe, is an egglike pentagonal fruit, about the fize of a pear, and is the least acid of the three; the last is extremely acid, and of a fmall roundifh, irregular thape, growing in clufters clofe to the branch, and containing each a fingle feed; they all make excellent pickles, and four fauce. The guava (pfidium). which is well known in the West-Indies. The baa bidarra (rhamnus jujuba) which is a round yellow fruit, about the fize of a goofeberry; its flavour is like that of an apple, but it has the aftringency of a crab. The nam nam (cynometra canliflora), which in fhape fomewhat refembles a kidney; it is about three inches long, and the outfide is very rough; it is feldom eaten raw. The juntul (tricbilia) which, within a thick

kingdom of Bantam, or to any other part of Java; thole of Madura, bear the name of their island. They are of a middling fize, and in general well-proportioned, of a light brown colour, with a broad forehead, and a flattish nose, which has a small curve downwards at the tip. Their hair is black, and is always kept smooth and shining, with cocoanut-oil. They are, in general, proud and lazy, as well as cowardly. Their principal weapon is a kris, which is a kind of dagger, like a small-fized couteau de chasse, and which they always carry with them. The handle, or hilt, is made of different materials, more or less valuable, according to

thick skin, contains kernels like those of the mangosteen, but which are both acid and aftringent. The madja (limoni), which contains, under a hard brittle shell, a lightly acid pulp, which cannot be eaten without fugar. The falac (calamus rotang zalacca), which is the fruit of a prickly bufh, and has a fingular appearance, being covered with fcales, like those of a lizard; it is nutritious and well tafted, in flavour fomewhat refembling a firawberry. The fakke fokkes (folanum melongena), which is of a purple blue colour, in fhape like a pear, and of various fizes; it has an agreeable tafte when boiled. Watermelons (arbu/es), which are in great plenty, and very good. Grapes, melons, pumpkins, pomegranates, and figs, appear to be the only European fruits to be met with at Batavia; though strawberries, and fome others, are faid to thrive in the interior parts of the country. T.

VOL. 1.

the

the wealth or dignity of the wearer. The blade is of well-hardened steel, of a serpentine shape, and thus capable of making a large and wide wound. It is often poifoned, and, in that cafe, caufes immediate death. Arrogant towards their inferiors, they are no lefs cringing with respect to their fuperiors, or whoever from whom they have any favour to expect.

Their drefs confifts in a piece of cotton, which they wrap round the waift, and drawing it between the legs, fasten it behind. . They are otherwife naked, except that they wear a fmall cap on the head. This is the drefs of the common people. Those of more confideration, wear a wide Moorish coat of flowered cotton, or other fluff, and in general turbands, inftead of the little caps. They fuffer no hair, but that of the head, to grow, and eradicate it carefully wherever it appears elfewhere.

The drefs of the women is little better than that of the men; it confiils in a piece of cotton-cloth, which they call faron, and which, wrapping round the body, just covers the bosom, under which it is fastened, and hangs down to the knees, and fometimes to the

T

the ancles; the shoulders, and part of the back, remain uncovered. The hair of the head, which they wear very long, is turned up, and twifted round the head like a fillet. fastened with long bodkins of different forts of wood, tortoifeshell, filver, or gold, according to the rank or wealth of the lady. This headdrefs, is called a condé, and is alfo in vogue among the Batavian ladies. It is often likewife adorned with a variety of flowers.

Both men and women, are very fond of bathing, especially in the morning. The children, of both fexes, go entirely naked, till about eight or nine years of age. Twelve . or thirteen is their age of puberty.

The Javanese are polygamists; they marry as many wives as they can maintain, and take their female flaves, befides, for concubines. This, however, of course, does not take place with the common people, who must be content with one wife, because they cannot afford to keep more. The women are proportionally more comely than the men; and they are very fond of white men. They are jealous in the extreme, and know how to make an European, with whom they

R 2

they have had a love-affair, and who proves inconftant, dearly repent both his incontinence, and his ficklenefs, by administering certain drugs to him, by which he is difqualified from the repetition of either. People of the utmost credibility at *Batavia*, have related to me, too many examples of this refinement of female revenge, to render the circumftance at all doubtful.

Their dwellings may, with greater propriety, be called huts, than houses. They are constructed of split bamboos, interlaced or matted, plaistered with clay, and covered with attap, or the leaves of the cocoanut-tree. The entrance is low, and is without a door or thutter. The whole house, usually confists of but one apartment, in which, hufband, wife, children, and fometimes their poultry, of which they keep a great many, pig together on the ground. They alway choofe a shady place to build in, or plant trees all round. Such as poffefs more property, are provided with a little more comfort and convenience: but it is always in a wretched, paltry manner.

Their chief food is boiled rice, with a little fifh, and their drink, water. They do not, however,

however, reject a little arrack, when they can obtain it. They are almost continually chewing betel, or pinang, and likewife a fort of tobacco, produced here, and therefore denominated Iava tobacco, which they alfo fmoke, through pipes made of reed; they fometimes put opium into their pipes with the tobacco, in order to invigorate their fpirits, but the continual use of it, rather deadens them; I faw fome, who had been too immoderate in this indulgence, who fat like statues, with open, fixed eyes, and fpeechlefs.

' They have no tables or chairs; but fit upon the ground, or upon mats, with their legs croffed under them. They do not either make use of any knives, forks, or spoons, but eat with their fingers.

They have a certain kind of mufical inftruments, called gomgoms, confifting in hollow iron bowls. of various fizes and tones, upon which a man strikes with an iron, or wooden stick, which do not make a difagreeable harmony, and are not unlike a fet of bells.

They are very fond of cockfighting, for which they keep a peculiar breed. Though they

R 3

they may be ever so poor, they will sooner dispose of every other part of their property, than sell their gamecocks. They are besides, obliged to pay a tax to the company for these fowls; and this duty is yearly farmed at *Batavia*, and forms part of the revenues of the province of *faccatra*. In the year 1770, it amounted to 420 gilders per month\*; it is, however, only in that province that they are liable to it.

A kind of tennis-play, is alfo a favourite diversion among them, and they are very handy and dexterous at it. They strike the ball with their feet, knees, or elbows, whither they chuse, and receive it back, thus keeping it for some time in continual motion, without its touching the ground: the ball is generally of the size of a man's head, hollow, and made of matted reeds.

Their manner of falutation, confifts in touching the forehead with the right hand, accompanied by a flight inclination of the body.

The Mahometan religion, is predominant over the whole ifland. It is faid, that far inland, over the mountains, towards the

\* About 35%. 10s. or 426%. per annum. T.

fouth

fouth fide of the island, there are ftill fome of the aboriginal idolatrous natives to be met with. Mofques, or places of prayer of the Mahomedans, are erected all over the island; there is a very famous one near *Cheriben*, but I did not fee it. They are very particular and nice, about the tombs of their faints, and will fuffer nothing unbecoming to be done, upon or near them; an inftance of which has been already related.

They have both male and female phyficians, who have been known to effect very furprifing cures, by means of their knowledge of the medicinal and vulnerary herbs. produced in their country. They have fometimes greater practice, among the Europeans at Batavia, than those physicians, who have been regularly bred, and come over from Europe; yet, they have no knowledge whatever of anatomy. Much friction of the affected parts, is one of their chief means of cure. This is done with two fingers of the right hand, which are pressed down by the left, and paffed continually downwards, • after having first anointed the part with water mixed with fine ground wood, or with oil.

R 4

For

For the purposes of agriculture, they use buffaloes, inflead of horfes, though there are enough of the last, but of a diminutive fize. These buffaloes are very large animals, bigger and heavier than our largest oxen, furnished with great ears, and horns which project straight forward, and are bent inwards. A hole is bored through the cartilage of the nofe, and these huge animals are guided by a cord which is paffed through They are generally of an afh-grey it. colour, and have little eyes. They are fo accuftomed to be conducted three times a day into the water, to cool themselves, that without it, they cannot be brought to work. The female gives milk, but it is little valued by the Europeans, on account of its acrimonious nature,

### CHAPTER III.

BATAVIA.—The River of JACCATRA.—The Water-fort.—The Bar at the Mouth of the River. —The Castle.—Buildings in, and near it.— Walls of the City.—Gates.—Admiralty-wharf.— Quarter for the Workmen-—Churches.—Houses.— Chinese Houses.—Massacre of the Chinese, in 1740. —Assection on Rents.—Bank of BATAVIA.— Suburbs.—The Chinese Campon.—Character of the Chinese.—Their Appearance.—Drefs.—Religion. —Temples.—Divination.— Tombs.—Environs of BATAVIA.—Roads.—Streets.

THE city of Batavia, styled by our own, and foreign travellers, who have formerly vifited it, the Queen of the East, on account of the beauty of its buildings, and the immense trade which it carries on, is fituated very near the fea, in a fertile plain. in the kingdom of Jaccatra, upon the river of that name, which, running through the middle of the town, divides it into two To the north of the city, is the feaparts. fhore; behind it, to the fouth, the land rifes with a gentle, and fcarcely perceptible, acclivity up to the mountains, which lie fifteen or fixteen Dutch miles, or leagues, inland; inland; one of these, which is very high, bears the name of the Blue mountain.

The fingular circumstances, which gave rife to the building of this city, are too well known in history, and too circumstantially related by VALENTYN, that I should repeat them here \*. I shall only make mention of fuch changes, as have taken place in the city, fince the time his work was written

\* The best account, in the English language, of the foundstion and rife of Batavia, is to be found in the Modern Univertal Hiftory, vol. x, page 304, &c. This is compiled from VALENTYN's great work, entitled Oud en Nieuw Ooft-Indie, and from other Dutch writers. It was in 1610, that the governor general, JOHN PIETERSEN COEN, took the town of Jaccatra, which he in a great measure destroyed, and founded another city, not exactly on the fame fpot, but very near it, to which he gave the name of Batavia, though it is faid, that he much wifhed to have called it New Horn, from the place of his nativity, Horn in North Holland. Although then an inconfiderable place, in point of firength and beauty, he declared it the capital of the Dutch fettlements in India; his choice of the fituation was fo just, his plan fo well contrived, and every thing throve fo fast under his care, that Batavia role with unparalleled rapidity to that magnificence and importance, which have rendered it, both the admiration and the dread, of all the more eaftern nations of the Indies; and which still dazzle and overawe them, although the city has, for these last fifty years, greatly declined, both as to opulence and population. T.

(1726);

(1726); at least, in so far as I had occasion to observe them.

The city is an oblong fquare, the shortest fides facing the north and south, and the longest the east and west.

Through the middle of the city, from fouth to north, runs, as before faid, the river of *Jaccatra*, over which there are three bridges, one at the upper end of the town, another at the lower part, near the caftle, and the third about the middle, being thence called the *Middlepoint* bridge. Two of these are built of stone. Close by the middlemost, there is a large square redoubt, provided with some pieces of cannon, which command the river, both up and downwards.

The breadth of the river, within the city, is about 160 or 180 feet. It runs into the fea, paft the caftle and the admiraltywharf. On both fides of the mouth, are long piers, of wood and brick-work, about 3,800 feet in length, taken from the moat of the city. The eaftern pier, which was repaired, and in a great measure rebuilt, a few years ago, cost the Company 36,218 rixdollars in timber, and 36,320 rixdollars in masonry, making, at forty-eight flivers, f. 174, f. 174,091, 4. \*; which is, in fact, a large fum, when it be confidered, that the timber cofts the Company but little money, as it is produced, in abundance, in *Java*.

The veffels belonging to the free merchants, are laid up, and repaired, between these piers, on the west fide; but along the east fide, the passage remains open, for the lighters, which go in and out of the city, with the cargoes of the ships.

At the outward point of the eaftern pier, there is a fhed, which ferves for a ftable for the horfes, which draw the fmall vefiels and boats up and down the river.

Opposite to this, is a hornwork, commonly called the *Water*-Fort, which was built during the government of the governor general VAN IMHOFF, at an immense expence to the Company; for several large ships were obliged to be funk, on account of the depth of water on the spot, in order to lay a good foundation, for building the fort. It is constructed of a kind of coral-rock, and defended by several heavy cannon +. It

\* About 16,000 l. sterling. T.

† In 1793, when Lord MACARTNEY visited Batavia, this fort had, mounted and difmounted, fourteen guns and two howitzers. T.

has

. . .

has barracks within it, for the garrifon; and there is no other approach to it, than along the western pier. It is at present very much out of repair, and the walls begin to fink and fall down, in many places.

The objects for which this fort was erected. feem to have been, the defence of the road. and of the entrance of the river; yet, in both these respects, it is now of little advantage, for the anchoring-place is now fo far removed from this fortification, by the encreafe of the mudbank. which lies before the river, that, although its guns might reach the ships in the road, little damage could be done, on either fide, at fuch a diftance \*; and as to what regards the defence of the river's mouth, that is of very trifling importance; for the daily and continual encreafe of the bar, renders the water much too shallow for large vessels, and an enemy would never feek to effect a landing there, but would always prefer an eafy, firm, fea-

\* ARY HUYSERS, who wrote an account of the Dutch fettlements in India, in 1789, and had been at *Batavia* a few years before, fays, that, in his time, a trial had been made of the heavy artillery at the mouth of the harbour, and that it was found fufficient to command and protect the whole extent of the road. T.

beach,

# [ 254 ]

beach, fuch as is to be met with beyond Ansjol \*.

The abovementioned bank, or bar, lies directly before the mouth of the river, and extends a great way to the weft, and but a little to the eaft, for which reafons, fuch veffels as are deeply laden, must go round by the east fide, close along the eastern pier, in order to get within the bar. It is continually encreasing towards the road, by which, the place where the ships lie, is more and more removed from the city. To the westward, it is dry in some places.

Right before the mouth of the river, from which the fhalloweft part of the bank is diftant about 600 or 650 feet, there is, at low water, no more than one, or one and a half, foot; fo that a common fhip's boat cannot get over it, but must also go round its east end. When the feabreeze blows fresh, it makes a troublesome and cockling

\* At Ansjol, and at Tanjongpoura, to the eaftward of the city, on the feacoaft, there are firong forts, and to the weftward, at, Ankay, Tangorang, and the Kwal. On the landfide, Batavia is further covered, by the forts at Jaccatra, the Wateringplace, Ry/wick, &c.; though these are merely defences against the natives, and are most of them, little better than fortified houses. T.

fea;

fea; and a weft, or bad, monfoon feldom passes, without the loss of some veffels upon it.

This shoalness of the water, is faid to be the confequence of a violent earthquake, which took place in *Java*, in the latter end of the last century, and by which the river of *Jaccatra* was partly stopped up. Yet the greatest encrease of the bank, has been since the year 1730; and it is to be apprehended, that the river will, in time, become wholly unnavigable, and useless, by it.

The castle, or citadel, of Batavia, which forms the north boundary of the eastern division of the city, is a regular, square fortres, with four bastions, which are connected by high curtains, except on the fouth fide, where the curtain was broken down during the government of Baron VAN IMHOF. The walls and ramparts, are built of coralrock, and are about twenty feet in height. It is furrounded by a wet ditch, over which, on the fouth fide, lies a drawbridge. Between the moat and the buildings withinthe fort, on this fide, there is a large area or efplanade. In the centre of the buildings that look towards the city, is a great gate, and

and then a broad paffage, with warehoufes on each fide, leading to another efplanade, on the north fide, enclosed between the ramparts and the buildings, all which is appropriated to the use of the Company \*.

The government-houfe, which forms the left wing of the buildings looking to the fouth, is provided with numerous and convenient apartments, but is at prefent uninhabited. In it, is a large hall, in which the council of India generally affemble twice a a week; this is adorned with the portraits of all the governors general, who have ruled in India, fince the eftablifhment of the company.

Clofe by, is a little church, or chapel,

\* Captain PARISH'S account of this fortrefs, in MACART-NEY'S Embaffy to China, 1793, is as follows :---" A little " above was the caffie; a regular, fquare fort, but without " ravelins or other outworks. It had two guns mounted on " each flank, and two, or fometimes three, on each face; " they were not en barbette, nor properly en embrafare, but in " a fituation between both, having both their difadvantages, " without the advantages of either. The wall was of ma-" fonry, about twenty four feet high. It had no ditch, but " a canal furrounded it at fome diftance. It had no cordon. " The length of the exterior fide of the work was about 700 " feet." Some further particulars, both of the town and of the caffle, are given in Mr. STAVORINUS'S fecond voyage. T. ufually

usually called the Castle-church, and a little more forwards, is a *corps-de-garde*, where a party of dragoons always mount guard.

Over the caftle-bridge there is a great plain, or fquare, planted with tamarindtrees, which afford a very agreeable fhade. The entrance to it from the city, is over a bridge, and through a large and ftately gate. This is mounted by a bold cupola, from which an octagon turret rifes, containing a large clock, which is the only public one to be met with at *Batavia*. It was built under the government of Baron VAN IMHOF, as appears by an infeription over the gateway, and forms no trifling embellifhment of the city.

On the left fide of the gate, is a large building, which ferves as a *corps-de-garde*, - having in front a long gallery, refting upon a row of pillars. A captain's guard of grenadiers, are generally posted here.

On the weft fide of the fquare, ftand the Company's artillery-houfe, and the difpenfary, or provision-magazine, both of which reach behind, to the river fide, fo that the goods are taken in and out of the lighters, with the greatest ease. This is an advanvol. 1. s tage tage which is poffeffed by almost all the Company's warehouses and repositories in Batavia.

On the opposite fide, is the iron-magazine, and what is termed the grafs-plat, being the place of execution for criminals: this is an artificial fquare eminence, upon which there is a gallows, and fome posts, behind it is a fmall building, with windows, looking towards the place of execution, whence the counfellors of justice behold the completion of their fentences\*.

There are a number of pieces of artillery, both iron and brafs, and of all forts and fizes, together with other warlike implements, ranged upon the plain. Any one may ride through the gate we have just mentioned, as far as the drawbridge of the castle, but not over it, unless he have the rank of fenior merchant, or higher.

The city is encircled by a wall of coral-

\* It is cuftomary throughout Holland, and its dependencies, for the magiftrates, or judges, who have paffed fentence upon criminals, to prefide at the execution of it. This is, in Europe, generally done upon fome open place before their townhalls, from the windows of which, the magistrates, dreffed in their robes of ceremony, behold the execution. T.

rock,

rock \*, defended by twenty-two baftions, or bulwarks, all provided with artillery, and furrounded by a broad moat, in which there is feldom any want of water, that being conveyed into it out of the river.

Batavia has five gates; one at the east fide, which is called the Rotterdam gate; two to the fouth, the New gate, and the Dieft gate; one to the west, the Utrecht gate; and one on the north fide, to the west of the river, called the Square gate.

Near to the last-mentioned gate, and oppofite to the castle, is the admiralty-wharf; and not far off, the warehouses for naval stores, as likewise the workshops of the carpenters, coopers, failmakers, and smiths, with other offices that relate to the shipping. Here are also the houses of the commandants, and comptrollers of equipment, who were formerly obliged to reside upon the wharf; but for some years past, this regulation has not been observed, and they now live in other, and more pleasant, parts of the town.

\* Sir GEORGE STAUNTON fays, that part of the town-wall is conftructed of lava, which is of a dark blue colour, of a very hard, denfe texture, emits a metallic found, and refembles very much forme of the lava of Vefuvius. T.

S 2

In

## [ 260 ]

In the foutheast corner of the city, close to the ramparts, lies what is called the Ambagt fkwartier, or the workmen's quarter, in which all the mechanics and labourers, who are employed by the Company in their buildings, have their abode. The journeymen work here, under masters of their respective trades, carpenters, fmiths, plumbers, braziers, masons, and others, who are all accountable to the chief of the quarter, who is called fabriek, or head workman, and has generally the rank of merchant. Besides a great number of Europeans, who are employed here, there are full a thousand flaves, who belong to this quarter, by which the Company incurs an enormous expence. with little benefit from their labour, which generally turns to the advantage of individual members of the government.

There are three churches for the reformed religion, within the city, in which fervice is performed in the Dutch, Portuguefe, and Malay languages, and one without the gates, which is called the outer Portuguefe church. Befides thefe, there is a Lutheran church, which was built during the government of Baron VAN IMHOF, not far

far from the caftle : this laft is provided with a fine organ, and a very handfome pulpit.

The town-hall, and other public buildings, are circumstantially described by VA-LENTYN, and I shall not, therefore, make further mention of them.

The houses at Batavia, are mostly of brick, run up in a light and airy manner, and fluccoed on the outfide, with fash windows. Within, they are almost all built upon a fimilar plan, the fronts being, in general, narrow, though there are a few that are more extended.

On entering the door, there is a narrow paffage, and on one fide a parlour, then you come into a large and long room, that receives its light from an inner court, which trenches upon this apartment, and renders its form irregular. This is called the gallery, and is the place where the family ufually live, and dine. The floors are of large, square, dark red stones. No hangings are to be feen; but the walls are neatly fluccoed, and whitened. The furniture confifts in, fome armchairs, two or three fofas, and a great many looking-glaffes, which the Europeans, in these regions, are very

S 3

very fond of. Several chandeliers and lamps, are hung in a row, along the length of the gallery, which are lit up in the evening. The stairs leading to the upper rooms, are generally at the end of this apartment, Six or feven steps up, there is one which ftands over the ftoreroom. or cellar, in which the flock of wine, beer, butter, &c. is kept. Up stairs, the houses are distributed almost fimilarly as below. They are, in general, but poorly provided with furniture; and the fetting out of rooms in order, is not fo much in vogue here, as in Holland: nothing is added that is fuperfluous, or more than is wanted for use. Behind the gallery, are the lodgings for the flaves, the kitchen, &c. There are but few houses, which have gardens, contrary to what SALMON erroneoufly afferts, in his Present State of all Nations: and there are not even the least vestiges left, of there having ever been gardens behind the houses. In feveral, the windows are closed with a lattice-work of rattans, in the room of being glazed, for the fake of air.

The above relates only to the houfes of Europeans, which are the greatest in num, ber,

ber. The few Chinefe, who live at prefent within the city, have very wretched houfes, the infide of which is very irregularly diftributed. Moft of them dwell in the fouthern and western suburbs, which are called the Chinese Campon. Before the revolt of the year 1740, they had the best quarter of the city allotted to them, to the west of the great river; but when, in that commotion, all their houses were burnt to the ground \*, the whole

\* Several relations have been given to the public, at different times, of the horrid transaction here alluded to; of which the most circumstantial is in the Modern Universal Hiltory, b. xiv, chap. 7. No two, however, agree; and the following account, extracted from a very recent and intelligent Dutch writer, ARY HUYSERS, who was long relident at Batavia, may therefore not be unacceptable. It is to be found in his Life of Reinier de Klerk, 1788 .- " A little before the " perpetration of this maffacre, feveral thousand Chinese ad-" venturers and fortune-hunters had reforted to Batavia, al-" lured by the profperity of their countrymen already fettled " there. The great number of these new colonists, together <sup>44</sup> with the robberies and murders which were committed by " them, excited no little degree of just apprehension. The . \* famous VAN IMHOF, who was, at that time, a member of " the council, proposed, in order to get rid of these useles. " and dangerous new-comers, that every Chinese who could " not prove that he had an honeft livelihood, fhould be <sup>44</sup> feized, and transported to Ceylon, there to be employed in <sup>46</sup> mining, or other labour, for the fervice of the Company. S 4 4 This

[ 264 ]

whole quarter was made into a *paffar*, or market, where, at prefent, all kinds of provisions are every day exposed to fale.

#### The

" This advice was approved of, and immediately followed. " A great number of Chinese were seized, and put in irons ; " but imprudently feveral Chinefe of property were fecured " by the under-officers, charged with the execution of the ar order, and were only liberated on paying large fums of " money. This occasioned great murmurings, and led the " reft of the nation to credit a report which was fpread abroad, " that those who were unable to pay, would be drowned, or other. " wife put to death. They in confequence retired, by thousands, " from the city, towards the interior parts, and ftrengthened them-" feives fo much, as to render the fate of Batavia it felf precarious, " In this dilemma, the council first offered an amnesty to the " discontented Chinese, but this they rejected with scorn: " and purposing to exterminate the whole christian fettlement. " began by ravaging the country in the wildeft manner, " burning the fugar-works, and marching down to the gates " of the city. Here, however, they met with a fevere rebuff. " The civil and military inhabitants united in repelling them, " and drove the rebels back again into the country. During " these commotions, the Chinese who resided within the town " kept themfelves perfectly quiet; and in order that thefe in-" nocent people might not be exposed to infult, the govern-" ment iffued an order, prohibiting them from leaving their " houses, after fix o'clock in the evening, and ordering them " to keep their doors shut. This prudent precaution was not, " however, sufficient to protect them from the fury of the " irritated foldiery and failors, who were in the city, and had ." witneffed the devastations of the Chinese without the gates. " On a fudden, and unexpectedly, an inflantaneous cry of " murder and horror, refounded through the town, and the " moft

### [ 265 ]

The poundage, or affeffment, which is paid annually by every house, confists in half

" most difmal scene of barbarity and rapine, prefented itself " on ail files. All the Chinefe, without diffinction, men. 4 women, and children, were put to the fword. Neither " pregnant women, nor fucking infants, were foured by the " relentless affaffins. The prifoners in chains, about a hun-" dred in number, were, at the fame time, flaughtered like " theep. European citizens, to whom fome of the wealthy " Chinefe had fled for fafety, violating every principle of " humanity and morality, delivered them up to their fan-" guinary purfuers, and embezzled the property confided to " them. In thort, all the Chinefe, guilty and innocent, " were exterminated. And whence did the barbarous order, " by which they fuffered, emanate? Here a veil has in-" duffrioufly been drawn, and the truth will probably never " be known, with certainty. The governor general, VAL-" KENIER, and his brother in-law, HELVETIUS, were ac-" cufed by the public voice, of directing the maffacre; but it " was never proved upon them." It is remarkable, that when VALKENIER was afterwards condemned to imprifonment for life, at Batavian among the numerous charges brought against him for maleadministration during his government, no notice was taken of his prefumed inftrumentality in this dreadful maffacre. Much apprehension was entertained that this occurrence would excite the indignation of the emperor of China, and deputies were fent to him the following year, to apologife for the measure. The letter written to the emperor on the occasion, is given at length by HUYSERS; the only remarkable circumstance in which it differs from the above relation, is the allegation, that fome Chinese within the city had fet fire to it in different places, and were preparing to rife upon the Europeans; but the extermination of the innocent

half a month's rent. This money is expended, in dragging and cleanfing the canals, and in repairing the townhall, and other buildings belonging to the city. Permiffion must be requested, every year, of the Company's government to levy this affessfment, in behalf of the city, which is feldom refused.

The houfes are not let by the year, but by the month; the rents run from five to forty rixdollars per month. A good houfe, in an agreeable fituation, may be hired for twenty or twenty-five rixdollars \*.

The churches are repaired out of the duties levied upon funerals.

A bank of circulation, has been eftablished here for fome years, which is united with the lombard, or bank for lending money on pledges. It is under the administration of a director, who is generally a counfellor of

cent with the guilty is acknowledged, and attempted to be excufed on the plea of neceffity. These deputies were agreeably furprised on finding that the emperor calmly answered, that " he was little folicitous for the fate of unworthy fubjects, " who, in the purfuit of lucre, had quitted their country, " and abandoned the tombs of their ancestors." T.

\* A rixdollar, at Batavia, is worth forty-eight flivers, or about 43. 4d. fterling. T.

India,

India, two commiffaries, a cashier, and a bookkeeper.

A fee of five rixdollars is given, at the opening of an account, and ftamped bankbills, figned by the director and commiffaries, are delivered for the money placed in the bank. Its capital is computed to amount to between two and three millions of rixdollars\*.

The fuburbs of Batavia, are remarkable. on account of their confiderable extent. uncommon pleafantnefs, and great population. They are inhabited by Indians of various nations, and by fome Europeans. The Chinese quarter is the most populous of all, and feems itself a city, with numerous streets: yet their houses are mean, and little. It is crouded with fhops, containing all kinds of goods, as well those of their own manufacture, and fuch as they receive annually from China, as what they buy up of those imported from Europe. The number of the Chinese, who live both within and without the walls of the city, cannot be determined with precision; but it must be very confiderable, as the Company receive a poll-

• Or between 435,000/. and 650,000/. sterling. T.

tax

tax from them of more than forty thousand rixdollars.

Every Chinefe, who has a profeffion, is obliged to pay a monthly poll-tax of half a ducatoon \*; women, children, and thofe who have no trade, are exempted from the tax: fo that their number can only be gueffed at. They are under a chief of their own nation, who is known by the appellation of Chinefe Captain; he lives within the walls, and has fix lieutenants under him, in different diftricts. A flag is hoifted at his door, on the first or fecond day in every month, and the Chinefe liable to the tax, are then obliged to come to him, to pay it.

Like the Jews in Europe, they are very cunning in trade, both in the largeft dealings, and in the most trifling pedlery. They are fo defirous of money, that a Chinefe will run three times from one end of the city to the other, if he have but the prospect of gaining one penny. In doing any businefs with them, the greatest care must be taken, to avoid being cheated.

Their stature is rather short than tall, and they are, in general, tolerably square. They

A ducatoon is 66 flivers, or 6r. sterling. T.

are

ars not fo brown as the Javanefe. They fhave their heads all round, leaving a bunch of hair, on the middle of the crown, which is twifted with a ribbon, and hangs down the back. Their drefs confifts in a long robe of nankeen, or thin filk, with wide fleeves, and under it they wear drawers of the fame, which cover their legs.

In every houfe, there is a niche, or place, where the image is hung up, of one of their josfies, or idols, painted on Chinefe paper. Before it they keep one or more lamps, always burning, as alfo, a kind of incense. which is made into little thin tapers. This idol is generally depicted as an old man, with a fquare cap upon his head, and a female, defigned for his wife, next to him. About an hour's walk out of the city, just beyond Fort Ansjol, they have a temple, ftanding in a grove of cocoanuttrees, by the fide of a rivulet, and in the midst of a most pleasant scenery. The building is about twenty feet in length, and twelve or thirteen in breadth. The entrance is through a railing, into a fmall area, and then into a hall, behind which is the fanctuary. In the middle, just within in the door, is a large altar, or which tapers, made of red wax, are kept burning, night and day. There is also an image of a lion, richly gilt. In a niche behind the altar, are representations of an old man and woman, both with crowns upon their heads, and about two feet in height, which are their idols; and as they look upon their *jooflje* to be an evil spirit, they continually supplicate him, not to do them any harm. In their adorations, they prostrate themselves before him, and endeavour to express the awe and reverence they entertain, by striking their head continually against the ground.

They likewife confult their idol, when they are about any important undertaking. This divination is done, by means of two fmall longitudinal pieces of wood, flat on one fide, and round on the other. They hold thefe with the flat fides towards each other, and then, letting them fall on the ground, augur of the effect of their prayers, and the good or bad refult of their purpofed enterprize, by the manner in which they lie, with the round or flat fides upwards. If the prefage be favourable, they offer a wax-candle to their god, which the prieft, prieft, or bonze, who attends at the temple. immediately turns into ready money.

In this temple I faw a Chinefe, who let these little sticks fall, above twenty times before they promifed him fuccess : he feemed to be but very little pleafed with thefe repeated evil prognoftications, and shaking his head, at every time, with a most difcontented look, he threw himfelf upon the ground, and thumped his head against it. till at last, the omen proved agreeable to his wifhes; and he then joyfully lighted a thick wax-candle, and placed it upon the altar of his joo/tie.

Befides this temple, the Chinese have feveral others, which are tolerated by the government; but it is worthy of observation, that whilf the practice of the most abominable idolatry is allowed, the exercise of the Roman Catholic religion is obstinately prohibited.

The Chinese are of a very lustful temper. They are accused of the most detestable violations of the laws of nature; and it is even faid, that they keep fwine in their houses, for purposes the most shameful and repugnant.

Their

Their tombs, on which they expend a great deal of money, are partly built above, and partly under ground. They are arched over. The entrance, which is made like a doorway, is closed with a large stone, covered with engraved Chinese letters. They are to be feen in great numbers, about half an hour's walk from Batavia, on the road to Faccatra.

They visit the graves of their ancestors and relations, from time to time: they ftrew them with odoriferous flowers: and when they depart, they leave a few fmall pieces of filk or linen, before the entrance. and fometimes boiled rice, or other victuals: which is fpeedily made away with at night.

The environs of Batavia are very pleasant, and are almost every where, interfected with rivulets, by which the circumjacent riceplantations, are inundated, and fertilized in the proper season.

There are five principal roads, which lead from the city, towards the country, and which are all planted with high and fhady trees.

That which runs to the eastward, to Ansjog and the feacoaft, is laid along the fide of a rivulet. 1

tivulet, the ftream of which running down an imperceptible flope, is very flow, which makes it refemble the canals for inland navigation, in Holland. Both fides of it, are adorned with gardens; but they are beginning to be neglected, fave one or two, belonging to the director general.

At no great diftance from the feafhore, whither this road finally leads, there is an oyfterbed; and on the beach ftands a houfe of entertainment, which is reforted to by the Europeans, for the purpose of eating this shellfifth.

The fecond road has the appellation of the Mango-doa, from its having been formerly planted with a double row of mango-trees. This runs more fouth than the former one. and farther inland. Along this road there are likewife many gardens, but they are none of them fo fplendid and pleafant as those which border and embellish the road to Jaccatra; for there, the finest picture that can be conceived, prefents itfelf to the delighted eye, both with respect to the grandeur of the buildings, and the elegance of the grounds. Most of the houses belonging to them, have their fronts towards the road, and from VOL. I.

from the backrooms they have a profpect of the river of *Jaccatra*.

This road is nearly two hundred feet broad, and is clofely planted with trees. I do not know, that I ever beheld a more delightful avenue. It terminates at a fmall fort, which is called *Jaccatra*, fituated about half a Dutch mile from *Batavia*, and though the road is continued, thence to *Weltevreeden*, the country-feat of the governor general, and beyond it farther into the country, it affumes, on the other fide of *Jaccatra*, the name of *Goenong Sari*.

The fourth, is called the *Molenvliet*, or Mill-drain, becaufe part of the water of the great, or *Jaccatra*, river, is diverted through a channel, along this road, for the purpofe of turning a powdermill, which ftands fearcely ten minutes' walk from the city. The road leads along the canal, for full half a Dutch mile up the country, and is equally adorned on both fides, with handfome houfes, and pleafant gardens. It then proceeds to *Tanabang*, where a large market is held every Saturday, for all kinds of provisions, which are brought thither from the interior parts.

The fifth road leads through the Chinefe Campon,

*Campon*, also along a river, to Fort *Ankay*, and is, in like manner, bordered on both fides with gardens.

None of these roads, nor any of the fireets in the city, are paved; the ground confists of a hard clay, which is made very fmooth and plain; only in the city, along the fides of the fireets, by the houses, are stone footpaths, of about three or four feet in breadth \*.

• The fireets and canals, at *Batavia*, are planted on each fide with large trees; generally the *onophyllum calophyllum* and *calaba*, the *canarium commune*, and fome others fill fcarcer. T.

CHAP-

## [ 276 ] ,

### CHAPTER IV.

Government of BATAVIA.—Council of India.—Governor General.—Direstor General.—C unfeliors of India.—Council of Justice.—Board of Scheepens.— Punishments.—Impalement. — Macks. — Orphan-Chamber.—Society for the Opium-Trade.—Chief of the Marine,—Commandant and Upper Comptroller of Equipment.—Vice-Commandant.—Military.— Militia. — Of Ranks and Precedency.— Sumptuary Laws.—Clergymen.—Coins.—Weigh's. —Meafures.

THE chief government of *Batavia*, and of all the poffeffions of the Dutch Eaft-India Company in Afia, is vefted in the council of India, with the governor general at their head.

This council confifted, when I was there, befides the director general, of five ordinary counfellors, including the governor of the *Cape of Good Hope*, nine extraordinary counfellors, and two fecretaries.

Five of the extraordinary counfellors, were governors of the out-factories of Java's Northeast Coast, Coromandel, Amboyna, Ceylon, and Macasser.

This

This council determines affairs, of every kind, those which relate to the administration of justice alone excepted. Yet in civi matters, an appeal may be made from the fentence of the council of justice, to the council of India.

All appointments and promotions to offices, are effected by the council of India, not excepting that of the governor general; but this must be confirmed by the affembly of feventeen. in the Netherlands \*.

The

\* Ecclefiaftical preferments, and the appointment of the ministers of justice, proceed immediately from the direction in Holland. In the council of India, the governor and director general, and the five ordinary counfellors, alone, conclude upon most matters that are brought before them; the other nine members are properly only affeffors, who may give their advice, but have no votes, except in the question of war or peace with the Indians, in the pardoning of criminals condemned to death, in the election of a governor general, and in a few other important points. The power and influence of this body in the Indies, are unbounded. It is the reprefentative of the flate, and of the Company, and millions of Indians are fubicct to its fway. Kings and princes, are crowned and dethroned by its mandates. " I have been witnefs," fays ARY HUYSERS, a writer, to whom we have before had occafion to refer. " to the depolition of two powerful kings of . " the Molucca's, and the hereditary prince of Tidore. One of " these died miserably in a little village, near the place of my " refidence. I faw the venerable old man before his death : "he

The authority of the governor general is almoft unbounded; and although he is obliged to give cognizance to the council, and confult them on fome matters, he poffeffes a moft arbitrary and independent power in all: for there are few or no members of the council, who do not ftand in need of his good offices, in fome inftance or other, for example, in order to obtain lucrative employments for their relations or favourites \*; and if this be not fufficient, to make them obey the nod of the governor, he is not defitute of the

" he was feventy-two years of age. When I expressed my commiferation at the deep humiliation he had undergone, he answered, with a figh, in the Malay language, pointing to heaven, 'It is the will of God.'" Other inflances of the tyranny of the Dutch Company over the native princes, are related in the prefent work. T.

By the fecond article of the oath taken by the governor general, as likewife by the counfellors of India, on their appointment, they engage " never to receive any gifts or prefents,
directly or indirectly, from any one under their authority;
neither in respect, or in the hope, or expectation thereof,
nor of any advantage, favour, or other private confideraration, either of relationship, friendship, or otherwise, to appoint, or cause to be appointed, any other individual to an
office, place, or station, than such as they believe and find
to possible the most ability, for the fame." So much do men regard oaths! T.

means

means of tormenting them, in every way, under various pretences; nay, of fending them prifoners to Europe: as was done. with respect to M. M. VAN IMHOF, DE HAAZE, and VAN SCHINNEN, in the year 1740, by the governor general VALKE-NIER\*. As, therefore, those who are immediately next to him in rank, depend upon. and stand in awe of him, it follows, that the fervants of the Company, who are in inferior stations, feel still deeper reverence, and tremble before him, as in the prefence of one, from whole arbitrary will and power, their happiness or misery wholly depends : the flavish submission with which his commands are received and executed, is, in confequence, fcarcely credible; for how is it possible that freeborn Hollanders, should bow themfelves to low, beneath the ignominious yoke!

His excellency the governor general, at prefent, ufually refides at his country feat,

\* VALKENIER, who was the perfonal enemy of the above gentlemen, tyrannically abused his authority in so far, that, when the council of India refused to fanction this arbitrary measure, he furrounded the council table with a body of armed men, and thus constrained them to affent to his wishes. 7.

т4

çalled

called *Weltevreeden*, about an hour and a quarter's walk from *Batavia*, and which is a fuperb manfion.

He gives public audience here, every Monday and Thursday; and on Tuesdays, and Fridays, at another feat, fituated nearer to the city, on the faccatra road. On the other days of the week, he is inacceffible to every body, and can not be fpoken to, unlefs on affairs of the greatest importance and Nobody goes thither, without urgency. having fome bufinefs to call him; for it would be taken extremely ill, if any one was to pay a visit of mere ceremony. The time of audience is from fix o'clock in the morning till eight. Every one waits, in the open air, in the court, before the house, till he is called in by one of the body-guards.

When the governor rides out, he is always accompanied by fome of his horfe-guards. An officer and two trumpeters precede his approach, and every perfon who meets him, and happens to be in a carriage, must stop, and step out of it, till he has rode by \*.

A com-

\* This humiliating homage, as well as that paid to the edele beeren, or counfellors of India, as will be prefently noticed, are

A company of dragoons always mount guard at *Weltevreeden*. He has befides forme halberdiers, who are employed in carrying meffages and commands, and who always are attendant on the governor's perfon, wherever he goes. They are dreffed in

are equally required from foreigners. These ceremonies are generally complied with by the captains of Indiamen. and other trading fhips ; " but." favs Captain CARTERET, who was at Batavia, in 1768, " having the honour to bear his " majefty's commiffion, I did not think myfelf at liberty ter " pay to a Dutch governor, any homage which is not paid " to my own fovereign : it is, however, conftantly required " of the king's officers; and two or three days after my arri-4 yal, the landlord of the hotel where I lodged told mes 44 he had been ordered by the *hebandar*, to let me know that " my carriage, as well as others, must stop, if I should meet " the governor, or any of the council; but I defired him to " acquaint the behander, that I could not confent to perform " any fuch ceremony; and upon his intimating fomething " about the black men with flicks, who precede the approach " of these great men, I told him, that if any infult should be " offered me, I knew how to defend myfelf, and would take " care to be upon my guard, at the fame time, pointing to my " piftols, which happened to lie upon the table; upon this he " went away, and about three hours afterwards returned, and <sup>46</sup> told me he had orders from the governor to acquaint me. " that I might do as I pleafed." Since that time, the English officers, have never been required to comply with this degrading cuftom; yet when they have been in an hired carriage. nothing has deterred the coachman from ftopping and alighting, in honour of the Dutch grandee, but the most peremptory menace of immediate death. T.

fhort

thort coats of fcarlet cloth, richly laced with gold, and follow in rank upon the junior enfign in the Company's fervice.

When his excellency enters the church, all perfons, both men and women, the counfellors of India not excepted, ftand up, in token of refpect \*. His lady receives the fame honours, and is equally efforted by a party of horfe-guards, when the rides out.

The governor general, who was in office at that time, was Mr. PETER ALBERT VAN DER PARRA, a native of *Colombo*, the chief fettlement of the Dutch in *Ceylon*. He was a man, inimical to all pomp, and in this refpect very different from most of his predeceffors. He was remarkably temperate, generally drinking pure water, and feldom taking any wine or beer. He was commonly occupied the whole day; and when he did not affift at the council-table, he was closeted with his fecretary and clerks.

The director general, who is the eldeft counfellor of India, is the next in rank. The direction and controul, over the trade of the

\* This etiquette was abolified upon the acceffion of R. DE KLERK to the government in 1777, as appears in the fequel. T.

Company,

Company, throughout all India, and to Europe, together with every thing that relates to it, is exclusively entrusted to him. The governor general does not in the least meddle in these matters, if the director have but the needful ability.

Next in order, follow the ordinary and extraordinary councellors of India. Those who refide at *Batavia*, are alfo ufually prefidents of different boards or courts. Every counfellor of India, has likewife the correfpondence with one of the out-factories, allotted to him; the general himfelf has that of one or two fettlements, and no one is excused, in this respect, but the director, on account of his multifarious other avocations.

Although every member of the council, lies under this obligation, there are but few of them, who take the trouble of the charge upon themfelves; most of them cause it to be effected by persons of a lower rank; and the best institutions are thus perverted by felfishness and floth.

When a counfellor of India, or his lady, enters a church, all the men ftand up, in the fame manner as for the governor general, but the women remain fitting. On \* meeting meeting one of them in a carriage, every body muft ftop, rife up, and bow to them, and ftay till they are gone by. When they go out, they have two flaves, who run before them with flicks, while other people are allowed but one.

There are always two fecretaries of the government, who take down in writing, all the propositions, or resolutions, which have been discussed in the council, and lay them before the governor general, when the affembly is broke up. He examines them. and gives directions what is to be made into decrees, and what is only to be inferted in the journals for notification. The refolutions being then drawn up in writing, by the first fecretary, they are again prefented to the governor, who makes fuch alterations in them as he thinks fit; and at the enfuing feffion of the council, they are read over, and approved.

The falary of a counfellor of India, is a thoufand rixdollars per annum; befides which he has fix hundred rixdollars for houferent, feven hundred for his trouble in figning difpatches, three hundred towards providing his table, together with a confiderable rable allowance of provisions from the Company's warehouses. Taking every thing together, he can reckon upon a yearly income of four thousand rixdollars, or nine thousand fix hundred gilders \*. Befides the above, the first fecretary has the emoluments attending the making out of the commiffions, which do not amount to a trifle, efpecially when many appointments of governors, directors, or commandants occur, who pay liberally for their commissions; fometimes giving fees to the amount of a thousand rixdollars. Yet none of them can fave any thing from this income, which they amply want for their household expences; for which reafon, they are generally favoured with the government or directorship of an out-fettlement, after they have been three or four years in the council.

The private fecretary of the governor general, is ufually promoted to be fecretary to the council, upon a vacancy.

Thirty-fix or forty clerks, are daily employed in the fecretary's office, which is next to the government-house, in the castle.

\* About 8751. sterling. T.

They

They have, for the most part, the rank of junior merchants; nevertheles, they are not able to earn more than a bare sufficiency to fubfish on.

Tuffice is administered to the fervants of the Company, by an affembly, having the appellation of council of justice. This body is, by its constitution, independent of the council of India: but as the members of which it confifts, have equally many wants and withes to be fulfilled, they likewife endeavour to be near the fountain-head of promotion and advantage; and, as well as all others, follow the inclinations of their fovereign ruler, in all cafes that are brought before them. This council confifts of a prefident, who ranks next to the junior counfellor of India, eight ordinary members, and two adjutors, taken from the Company's fervants. Their falary is, as I was informed, no more than two thousand two hundred rixdollars; which is fcarcely fufficient for the fupport of their establishments : they are, besides, obliged to ferve the office of counfellor of justice, for the fpace of ten years, before they may be candidates for any other office.

There are two fifcals belonging to this council,

council, one of which bears the title of advocat-effical, or attorney general, but whole office relates only to the perfons in the Company's fervice, both by fea, and by land. The other is stiled the water-fiscal, and through whom, all indictments relative to navigation are made. This was formerly one of the most lucrative employments of all India, and it is still very advantageous, though not fo much fo as before, because the private trade, is nothing like fo flourishing as it was in former times. The methods by which fortunes were made in this office, will eafily be conceived by feafaring people. The fecretary of the council of justice, has the rank of merchant.

The citizens, and free merchants of **Ba**tavia, who are not in the Company's fervice, are amenable to a feparate municipal court of justice, being what is called the board of *fcbeepens*, or aldermen, who are eight in number, with a prefident, who is a member of the council of India.

To this court belong a fheriff, for the matters which relate to the city, and a conftable of the territory of *Batavia*; both of which which are very lucrative offices, and are never beftowed but on great favourites.

The punishments inflicted at *Batavia*, are exceflively fevere, especially such as fall upon the Indians. Impalement is the chief, and most terrible.

In the year 1769, I faw an execution of this kind, of a Macasser flave, who had murdered his mafter; which was done in the following manner. The criminal was led, in the morning, to the place of execution, being the grass-plat, which I have before taken notice of, and laid upon his belly, being held by four men. The executioner then made a transverse incision at the lower part of the body, as far as the os facrum; he then introduced the sharp point of the spike, which was about fix feet long, and made of polished iron, into the wound, so that it passed between the backbone and the fkin. Two men drove it forcibly up, along the fpine, while the executioner held the end, and gave it a proper direction, till it came out between the neck and shoulders. The lower end was then put into a wooden post, and riveted fast; and the sufferer was lifted up, thus

thus impaled, and the post fluck in the ground. At the top of the post, about ten feet from the ground, there was a kind of little bench, upon which the body rested.

The infenfibility, or fortitude, of the miferable fufferer, was incredible. He did not utter the least complaint, except when the fpike was rivetted into the pillar; the hammering and shaking occasioned by it, feemed to be intolerable to him, and he then bellowed out for pain; and likewife once again, when he was lifted up and fet in the ground. He fat in this dreadful fituation, till death put an end to his torments, which fortunately happened the next day, about three o'clock in the afternoon. He owed this fpeedy termination of his mifery, to a light fhower of rain, which continued for about an hour ; and he gave up the ghoft half an hour afterwards

There have been inftances at *Batavia*, of criminals who have been impaled, in the dry feafon, and have remained alive for eight, or more days, without any food or drink, which is prevented to be given them, by a guard who is flationed at the place of execution, vol. 1.

I

for that purpole. One of the furgeons of the city affured me, that none of the parts immediately neceffary to life, are injured by impalement, which makes the punifhment the more cruel and intolerable; but that as foon as any water gets into the wound, it mortifies, and occasions a gangrene, which directly attacks the more noble parts, and brings on death almost immediately.

This miferable fufferer continually complained of unfufferable thirft, which is peculiarly incident to this terrible punifhment. The criminals are exposed, during the whole day, to the burning rays of the fun, and are unceasingly tormented by numerous ftinging infects.

I went to fee him again, about three hours before he died, and found him converfing with the byftanders. He related to them, the manner in which he had murdered his good mafter, and expressed his repentance, and abhorrence of the crime he had committed. This he did with great composure; yet an instant afterwards, he burft out in the bitteress complaints of unquenchable thirst, and raved for drink, while no one was

was allowed to alleviate, by a fingle drop of water, the excruciating torments he underwent.

This kind of punifhment, notwithstanding its great cruelty, is afferted by many, to be of the highest necessity, in a country, where a treacherous race of men, unreftrained by any moral principles from the perpetration of the greatest crimes, perform the daily menial and household fervices of the Europeans. The flaves that come from the ifland of Celebes, and especially the Bouginese, are guilty of the most horrid murders : most of those who run mucks belong to that nation.

These acts of indiscriminate murder, are called by us mucks, because the perpetrators of them, during their frenzy, continually cry out, amok, amok, which fignifies, kill, kill. When, by the fwallowing of much opium, or by other means, they are raifed to a pitch of defperate fury, they fally out with a knife, or other weapon, in their hand, and kill, without diffinction of fex, rank, or age, whoever they meet in the ftreets of Batavia; and proceed in this way, 'till they are Their either shot dead, or taken prisoners. intox.

U 2

intoxication continues till death; they run in upon the arms opposed to them, and often kill their opponents, even after they are themfelves mortally wounded.

In order, if poffible, to take them alive, the officers of juffice are provided with a pole, ten or twelve feet in length, at the end of which there is a kind of fork, made of two pieces of wood, three feet long, which are furnifhed within with fharp iron fpikes; this is held before the wretched object of purfuit, who, in his frenzy, runs into it, and is thus taken prifoner.

If he happen to be mortally wounded, he is immediately broken alive upon the wheel, without any form of trial, in the prefence of two or three of the counfellors of justice.

Many inftances of *mucks* occurred, during my refidence at *Batavia*; they were mostly done in the evening \*.

The

\* It is remarkable, that at *Batavia*, where the affaffins, juft now defcribed, when taken alive, are broken on the wheel, with every aggravation of punifhment, that the moft rigorous juftice can inflict, the *mucks* yet happen in great frequency; whilft at *Bencoolen*, where they are executed in the moft fimple and expeditious manner, the offence is extremely rare. Exceffes of feverity in punifhment, may deter men from deliberate.

## [ 293 ]

The orphan-chamber at Batavia, ferves, at the fame time, for the whole of the Dutch

rate, and interested, acts of villany, but they only exasperate ftill further, the atrocious enthuliafm of defoeradoes. The Indian who runs a muck is always first driven to desperation by fome outrage, and always first revenges himself upon those who have done him wrong : they are generally flaves; who indeed are most subject to insults, and least able to obtain legal redrefs. It has been usual to attribute mucks to the confequences of the use of opium; but the words of Mr. STAVO-RINUS, who fays that they are occasioned " by the fwallow-"ing of opium, or by other means," feem to confirm the opinion entertained by MARSDEN, that this should probably. rank with the many errors that mankind have been led into, by travellers addicted to the marvellous. That these furious quarrels, and fanguinary attacks, do actually, and frequently take place in fome parts of the eaft, cannot be controverted; but it is not equally evident that they proceed from any intoxication, except that of their unruly paffions; and many mucks might, upon fcrutiny, be found to be of the nature of one, which Mr. MARSDEN particularizes, of a flave, who probably never indulged in the use of opium in his life, a man of ftrong feelings, driven, by excels of injury, to domeftic rebellion; or of that related in Lieut. Cook's voyage in the Endeavour, of a free inhabitant of Batavis, whofe brain was fired more by the maddening fury of jealoufy, than by any adventitious intoxication. It is true that the Malays, when bent upon any daring enterprize, fortify themselves with a little opium, in order to become infentible to danger; as the people of another nation are faid to take a dram ; but it must be observed, that the resolution for the act precedes, and is not the effect of the intoxication. They take the fame precaution,

υ3

# [ 294 ]

Dutch possession in India. Every outfactory has, it is true, its own orphan-chamber, but they must render account of their administration, to that of the capital, and remit the effects which are not claimed, or the heirs to which do not reside on the spot. That of *Batavia* corresponds with the orphan-chambers of the different cities where the chambers of the East-India Company are established \*.

The board confifts of a prefident, who is a counfellor of India, and fix weefmeefters, or regents, who are appointed by the coun-

caution, previous to being led to public execution; but on these occasions, shew greater signs of stupidity, than of frenzy. Upon the whole it may reasonably be concluded, that the sanguinary achievements, for which the Malays have been famous, or infamous rather, are more justly derived from the natural ferocity of their disposition, than from the qualities of any drug whatever. At *Batavia*, if an officer take one of these *amoks*. or mohawks, as they have been called by an easy corruption, alive, his reward is very confiderable, but if he kill them, nothing is added to his usual pay; yet such is the fury of their desperation, that three out of four, are of neceffity destroyed in the attempt to secure them. T.

\* Weiskamers, or orphan-chambers, are establishments which are dispersed throughout the United Provinces, for the administration of the estates of all who die intesset, and the apportionment of them among the heirs. 7.

cil

cil of India; with a fecretary, and a fworn clerk. The capital flock, remaining in the hands of the orphan-chamber, amounted in the year 1766, to f.2,393,566 \*.

There are feveral other courts, or boards, as the commissioners of dikes and fluices, those of bankruptcies, a court of common pleas, a board of controul over marriages, and others.

A fociety was established at *Batavia*, during the government of Baron VAN IMHOF, for the opium-trade, which is still in existence.

The flock of the fociety is divided into fhares, of two thousand rixdollars each, on which the half has hitherto only been furnished, but the remainder may be required at any time.

The dividends are unequal, yet very large, and the fhates are fold at a high premium; they are generally in the hands of the counfellors of India.

The management of this trade, is entrusted to a director, who is a counsellor of India, two acting proprietors, a cashier, and a bookkeeper.

\* About 220,000/. fterling. T. Every **U**4

Every cheft of opium stands the Company in two hundred and fifty, and sometimes in three hundred rixdollars, and is delivered to the fociety for five hundred, and fometimes more. On the other hand. the Company is bound to fell this drug to no other. The retail of it, produces large profits, as the fociety make eight or nine hundred rixdollars, and more, of every cheft. The gain would be more confiderable, if this monopoly could be ftrictly enforced, for the whole quantity of opium, confumed in the eastern parts of India; but, notwithstanding the Company have interdicted this trade to their fervants, and especially to the feamen, upon pain of death, and have prohibited the importation into any of their poffessions, by foreign nations, upon pain of confifcation of ship and cargo, yet very great violations of these laws are daily practifed in fecret, on account of the important profit which this branch of trade affords ; by which the fociety is much injured, although, on their part, they do all they can, on the arrival of thips from the Ganges, to discover if any contraband opium be on board : but those who engage in this illicit trade,

trade, take too many precautions, to run any danger of detection. The fmuggling trade which the Englifh carry on, in this article, in the eaftern iflands, and by way of *Malacca*, is also extremely detrimental to the fociety.

When any fhips arrive in the road of *Batavia*, from fuch places, whence contraband goods can be brought, two of the members of the council of juffice, with the waterfifcal, and the provoft-marshal, are dispached the next day, in order to examine, whether any prohibited wares are on board ; the examination, however, is only personally done by the lastnamed officer, who reports the refult to the others.

A chief of the marine, or port-admiral, has been established at *Batavia*, fince the year 1762. This office was filled by Mr. N. HOUTINGH, vice-admiral of Holland, of the northern division. He is in rank equal to a counsellor of India, but takes place after the junior counsellor. He has the fame privileges; has equally the ftyle of *edele beer*, and may he present at their associated bies; but may not deliver his sentiments, except except in matters relative to his department.

His chief occupation confifts in fuperintending the reparation of fhips; in examining the fhips' journals; in figning the failing-orders, and the warrants for delivery of ftores to the fhips; and further, in keeping all that relates to maritime affairs in due order.

Upon this officer, follows the commandant and upper comptroller of equipment, to whom the management of the ftores is confided. He has likewife the fuperintendence over the discharging and loading of the fhips, the manning of them, and the furnishing them with provisions. This is also one of the most lucrative, but, at the same time, one of the most troublefome, employments at Batavia. Since he has a head placed over him; however, the former quality has greatly decreased, while the latter, has remained in full force. He is affifted by a vice-commandant, and under comptroller of equipment, to whom he generally delegates the superintendence of the loading and unloading of the thips, and who supplies his place,

place, in cafes of fickness, or absence. This gentleman has the rank of post-captain.

The Company have granted to these three officers, as an emolument, the privilege of shipping some tons of goods (contraband wares excepted) by every ship that fails to India, according to the size of the vessels; and if a ship's captain do not buy up these goods of them, at a very high rate, he is fure to find very scanty opportunities of disposing of his own.

The commanders of veffels, with their lieutenants and mates, follow next in order; the first rank equal with merchants : when I was at *Batavia*, in 1770, there were thirtynine of them, who refided there, or commanded country-fhips.

The whole of the land-forces of the Dutch in India, are under the command of one head, who was formerly ftyled captain-major, but has now the title of brigadier. In rank he follows upon the chief of the marine. He has two lieutenant-colonels under him; one of whom has the command of the military at *Batavia*, and the other at *Ceylon*; there are befides fix majors, two of whom refide at *Ceylon*, [ 300 ]

Ceylon, one on the Malabar coaft, one at the Cape of Good Hope, and two at Batavia; one of these last is, at the same time, chief of the artillery.

There is a regiment of dragoons, which ferve as a body-guard to the governor general. The infantry are divided into two batallions, and are quartered within and without the city.

Befides these regular troops, two companies, called *pennists*, are embodied, confisting in merchants, junior merchants, bookkeepers, and affistants. One Company are called *pennists* of the castle, and the other, *pennists* of the city. The former are commanded by the first fecretary of the government, and the latter by one of the fenior merchants of the castle. They are reviewed once a year, by the governor general, and the council; and each company have a diftinct uniform.

The other Company's fervants are alfo formed into two companies; one confifting in the marines, and others, belonging to the admiralty-wharf, with the commandant and upper comptroller of equipment at their head; head; the other of the workmen of the *ambagts kwartier*, with the *fabriek* as their captain.

Independently of thefe, all the free inhabitants, or citizens, are likewife enrolled in two companies of horfe, and of foot, which are commanded by a counfellor of India, as colonel, and mount guard every night at the townhall.

All the practitioners of furgery, are fubordinate to a chief, who has the controul over all the furgeons, and furgeons' mates, as well on board of the fhips, as in the hofpitals; and who has the rank of fenior merchant.

It will not be unfuitable in this place, to make fome mention of the diffinctions of precedency and rank, which are fo minutely attended to in all the Company's pofferfions in India, and which may, on no account, be neglected; more efpecially in all public companies, and affemblies. Every individual is as stiff and formal, and is as feelingly alive to every infraction of his privileges, in this respect, as if his happines or mifery depended wholly upon the due obfervance of them. Nothing is more particularly

ticularly attended to, at entertainments, and in companies, by the mafter of the house. than the feating of every gueft, and drinking their healths, in the exact order of precedency. The ladies are peculiarly prone to infift upon every prerogative attached to the ftation of their hufbands; fome of them. if they conceive themfelves placed a jot lower than they are entitled to, will fit in fullen and proud filence, for the whole time the entertainment lasts. It does not unfrequently happen, that two ladies, of equal rank, meeting each other, in their carriages, one will not give way to the other, though they may be forced to remain for hours in the ftreet. Not long before I left Batavia, this happened between two clergymen's wives, who chancing to meet in their carriages, in a narrow place, neither would give way, but stopped the passage for full a quarter of an hour, during which time, they abufed each other in the most virulent manner, making use of the most reproachful epithets, and whore and flave's brat. were bandied about without mercy: the mother of one of these ladies, it seems, had been a flave, and the other, as I was told, was not a little

a little fufpected, of richly deferving the first appellation: they, at last, rode by one another, continuing their railing till they were out of fight; but this occurrence was the occasion of an action, which was brought before the council, and carried on with the greatest virulence and perfeverance.

To provide against these disputes on the fubject of precedency, the respective ranks of all the Company's servants were ascertained by a resolution of government, which was renewed in 1764; and a regulation respecting the pomp of funeral processions, was, at the same time, added to it, which is still in force.

Regulations were likewise introduced with respect to dress, during the government of the governor general Mossel; by which, persons of a certain condition, were alone allowed to wear embroidered, or laced, clothes; but this is but little attended to at present, for almost every one who chooses, now goes dressed in this forbidden finery, and fumptuary laws soon grow into difuse here, as well as in other places. Velvet coats are, however, not common, and they are

## [ 304 ] .

are abfolutely prohibited to be worn by any one under the rank of fenior merchant\*.

#### When

\* The act by which these regulations were established, is composed, together with a supplement, of a hundred and thirty-one articles, and relates to all the Dutch fettlements in India. It enters into the most minute detail respecting the carriages, horfes, chairs, fervants, drefs, &c. of the Company's fervants, and exhibits a strange picture of meanness and illiberality in the midfl of affected grandeur. By the 8th article. little chaises for children, drawn by the hand, must not be wilt, or painted, but in the exact proportion of the rank of the parents. By the arft, it is ordained, that no one lower in rank than a merchant shall make use of a parafol, or umbrella. in the neighbourhood of the caftle, except when it rains. Ladies, whole hulbands are below the rank of counfellors of India, may not wear at one time, jewels of more in value than fix thousand rixdollars; wives of fenior merchants, are limited to four thousand, others to three thousand, and a thousand. Article Aoth, permits ladies of the higher ranks to go abroad with three female attendants, who may wear " ear-rings of " fingle middle-fized diamonds, gold hair-pins, petticoats of " cloth of gold, or filver, or of filk, jackets of gold or filver " gauze, chains of gold, or of beads, and girdles of gold, but " neither pearls, nor diamonds, nor any other kind of jewels, " in the hair." Wives of fenior merchants may have two. and ladies in an inferior station, one, maid, who may wear " ear-rings of fmall diamonds, gold hair-pins, a jacket of fine " linen, and a chintz petticoat, but no gold or filver fluffs or " filks, or any jewels, true or falfe pearls, or any other ornaments " of gold." By article 65, none but perfons of the higheft rank are allowed to have any trumpets, clarions, or drums, among the mufic, with which it is cuftomary to entertain guests during dinner. There is a wife recommendation in the

When their number is complete, there are twelve clergymen of the reformed religion, at *Batavia*, fix of whom preach in the Dutch, four in the Portugues, and two in the Malay, languages; there are likewise three Lutheran ministers, who preach in Dutch.

Service is performed every Sunday, in the above three languages; in Dutch, at two churches in the morning, but only at one

the 83d article, to the officers of the Company in Bengal, not to furpals their predeceffors in pomp of drefs, or appearance, and especially not the governors or chiefs of the other Euro-Perhaps the 110th article, is the most pean frttlements. curious of all. It allows to the director at Surat, when he goes out in state, among other things, four fans, made, according to the fashion of the country, with the feathers of birds of paradife, and cow-hair, with golden cafes and handles. It is in this fame act of the council, that the orders before noticed. refpecting the homage to be paid by every one, on meeting the members of the government in their carriages, or when they enter the churches, are inferted. It likewife fixes the duties to be paid upon all carriages, horfes, &c. It is worthy of obfervation, that those upon carriages encrease downwards, from the higher to the lower ranks; members of the government pay 50 rixdollars per annum, captains of the military, merchants, &c. 190, junior merchants, &c. 125, bookkeepers, &c. 180, citizens of no special rank, and native inhabitants of confideration, 200, and the common natives, 300 rixdollars, for keeping of carriages. Larger or imaller fines, are the penalties attached to the infraction of almost all these fumptuary regulations, Where wealth and pride unite, they are, therefore, of little avail, to reftrain an excels of luxury. in the afternoon. An examination of catechumens takes place every Wednefday evening. So that upon the whole, thefe reverend gentlemen need not complain, when their number is complete, of too fevere labour in the vineyard of the Lord. The morningfervice commences at half paft eight o'clock, and is generally over by ten, when the greateft heat of the day begins to come on.

Ecclefiaftical difputes, are never heard of here. The Company's government, who are extremely anxious to avoid every thing that could interrupt the public tranquillity, would foon terminate the quarrel, by the fummary argument of force, an example whereof is to be met with in VALENTYN.

It is much to be wished, that upright and learned clergymen, were alone fent hither. Yet that this is not always the case, appears from a resolution taken by the government there, in the year 1768, carness for request that the assembly of seventeen, would dispatch fome ministers of the gospel, posses of virtue and learning, to *Batavia*, with an augmentation of salaries and emoluments. Their falary was then one thousand eight hundred gilders per annum, but with their allowances

allowances for houferent, board, &c. they could reckon upon three thoufand\*, which is certainly not enough to live upon at *Batavia*, with a family, and on an equal footing with the fenior merchants.

Once in every year, or fometimes only once in two years, one of the clergymen of *Batavia*, go upon a vifitation, to the Company's posseficient of *Sumatra*'s west coast. Some of them, well know how to avail of such occasions, to the advantage of their pockets, by taking with them as much merchandize for sale, as they can find room for in the ship, by which they take their passage.

The coins current at *Batavia*, are the following:—the milled Dutch gold ducat, which is worth fix gilders and twelve flivers: the Japan gold *coupangs*, of which the old, go for twenty-four gilders, and the new, for fourteen gilders and eight flivers: the Spanish dollar, or piaster, rifes and falls, according to the quantity in circulation, or the degree of demand; its value is generally between fixty-three and fixty-fix flivers: the milled filver ducatoon, which is the current

> \* About 275% fterling. 7. X 2

coin

coin of the Company, throughout their polfeffions, except on the continent of India; its proportionate value, according to the other coins, is fixty-fix flivers; but in Indian money it goes for eighty, at which rate it is current at Batavia; at the Cape of Good Hope, it is worth feventy-two, and at Cochin seventy-five flivers : the unmilled ducatoon, is two flivers lefs at Batavia: the milled Batavia rupee, called the filver derbam d' fava, which was formerly coined at Batavia, is made good in the Company's books at twenty-four stivers, and in circulation it is taken at thirty; it is the only rupee that goes for fo much at Batavia, and is current at Amboyna, Banda, Ternate, Macaffar, and Malacca, at the fame rate, but on the coaft of Malabar, it is eight per cent. lefs in value, than the Surat rupee; all other rupees generally go for twenty-leven fivers ; the Persian rupees are the most current : there are also half and quarter rupees in circulation : the imaller coins are fkillings, dubbeltjes, or twopenny-pieces, and doits; there are two forts of skillings, the old, which are the fame as are current in Holland, go for fix flivers, but the new, which 216

are here called fhip-fkillings, are worth feven and a half: twopenny-pieces, which are old and worn, go for two flivers, but the new, for two flivers and a half; no other doits are taken in change, then those that are flamped with the mark of the East-India Company, and these are equal to a farthing in value: the rixdollar, which is the money used for accounts in private trade, is a coin, which is worth forty-eight flivers, thus three new or milled ducatoons, are equal to five rixdollars \*.

Most merchants' goods are calculated at Batavia, by picels of one hundred and

\* The following is a table of the value in fterling money, of the above coins, at the par exchange of f.11 per pound; viz.

					£٠	s.	d.
The old Japan gold coupang		f.24	0	or	2	3	77

twenty-five pounds, Amfterdam weight \*, and these are subdivided into a hundred cattis, each weighing one pound and a quarter.

Rice, and other grain, is meafured by coyangs, which differ in weight. On the receipt of the rice by the Company at fava, they must weigh three thousand five hundred They are shipped to Batavia for pounds. three thousand four hundred, and landed there for three thousand three hundred. The warehoufe-keepers, difpatch them for the out-factories for three thousand two hundred. where they are unloaden for three thousand one hundred, and, finally, they are delivered for confumption for three thousand pounds at the out-factories, namely, those that receive their rice from Batavia, as Malacca, the Cape of Go d Hope, Ceylon, Sumatra's west coaft, &c. thus every coyang lofes five hundred pounds in weight +.

Sugar

\* RICAUD, in his Traité de Commerce, makes the picol, at Batavia, equal to 118<sup>1</sup>/<sub>3</sub>lb. Amfterdam weight. T.

† This deficiency is an allowance which is made to the Company's fervants who respectively have the management of the rice, for instance, for every 3,300 received at *Batavia*, the warehouse-keepers are only bound to deliver 3,200, &c. Out of this difference they muss make good all loss, by dust &c. and what they can keep over is a perquisite to themselves. Similar Sugar is taken by *canaffers*, of three *picols*, or three hundred and feventy-five pounds, neat, each : the grofs weight is about four hundred or four hundred and five pounds.

The ganting, is a fmall rice-measure, of thirteen pounds and a half in weight.

Every bag of coffee, which is fhipped from *Batavia* to Holland, weighs two hundred and fifty-two, and a bale of cinnamon, eighty pounds.

Similar allowances are made on most of the goods in which the Company trade, and they are all very particularly fixed by a refolution of the council. They form a very material part of the income of the Company's fervants; who, however, are bound to fell again to the Company, what they have gained in this way, of all spices, coffee, faltpetre, japan copper, and tin; the other articles they are allowed to dispose of as they please. **7**.

Mode of living of the Europeans at BATAVIA. Women.—Their early Marriages.—Complexion.— Temper.—Manner of Life.—Education of Children.—Bathing.—Exceffive Jealoufy of the Indian Ladies.—Cruelty to their Female Slaves.—Short Widowboods.—Their Drefs.—Diverfions.—Carriages.—Norimons.—Carts drawn by Buffaloes,— Further Particulars of the Management of the Company's Trade.—Senior Merchants of the Caftle. — Administrators or Warehouse-keepers. — Commissinger to India.

**EUROPEANS, whother Dutch, or of** any other nation, and in whatever flation they are, live at *Batavia*, nearly in the fame manner. In the morning, at five o'clock, or earlier, when the day breaks, they get up. Many of them, then go and fit at their doors; but others ftay in the house, with nothing but a light gown, in which they fleep, thrown over their naked limbs; they then breakfast upon coffee or tea; afterwards they dress; and go out, to attend to the business they may

### [ 313 ]

may have. Almost all, who have any place or employment, muß be at their proper fation at, or before, eight o'clock, and they remain at work till eleven, or half paft. At twelve o'clock they dine; take an afternoon's nap till four, and attend to their bufinefs again till fix, or take a tour out of the city in a carriage, At fix o'clock they affemble in companies, and play, or converse, till nine, when they return home; whoever chooses to hay to supper is welcome; and eleven o'clock is the usual hour of retiring to Convivial gaiety feems to reign reft. among them, and yet it is linked with a kind of fuspicious referve, which pervades all flations, and all companies, and is the confequence of an arbitrary and jealous government. The least word, that may be wrested to an evil meaning, may bring on very ferious confequences, if it reach the ears of the perfon who is aggrieved, either in fact. or in imagination. I have heard many people affert, that they would not confide in their own brothers, in this country.

No women are present at these assemblies, they have their own separate companies.

Married men, neither give themselves much much concern about their wives, nor fhew them much regard. They feldom converfe with them, at leaft not on ufeful fubjects, or fuch as concern fociety. After having been married for years, the ladies are often, therefore, as ignorant of the world and of manners, as upon their wedding-day. It is not that they have no capacity to learn, but the men have no inclination to teach.

The men generally go dreffed in the Dutch fashion, and often wear black.

As foon as you enter a houfe, where you intend to ftop for an hour or more, you are defired by the mafter, to make yourfelf comfortable, by taking off fome of your clothes, &c. This is done, by laying afide the fword, pulling off the coat, and wig (for moft men wear wigs here), and fubfituting in the room of the laft, a little white night-cap, which is generally carried in the pocket, for that purpofe.

When they go out, on foot, they are attended by a flave, who carries a funfhade (called here *fambreel* or *payang*) over their heads; but whoever is lower in rank than a junior merchant, may not have a flave behind him, but must carry a finall funfhade himfelf. Moft

Most of the white women, who are seen at *Batavia*, are born in the Indies. Those who come from Europe at a marriageable age, are very few in number. I shall, therefore, confine my observations to the former.

These are either the offspring of European mothers, or of oriental female flaves, who having first been mistress to Europeans, have afterwards been married to them, and have been converted to christianity, or at least have affumed the name of christians.

The children produced by these marriages, may be known, to the third and fourth generation, especially by the eyes, which are much smaller than in the unmixed progeny of Europeans.

There are likewife children, who are the offspring of Portuguese, but these never become entirely white.

Children born in the Indies, are nicknamed *liplaps* by the Europeans, although both parents may have come from Europe.

Girls are commonly marriageable at twelve or thirteen years of age, and fometimes younger. It feldom happens, if they are but tolerably handfome, have any money, ney, or any to expect, or are related to people in power, that they are unmarried after that age.

As they marry while they are yet children, it may eafily be conceived, that they do not poffess those requisites which enable a woman to manage a family with propriety. There are many of them, who can neither read nor write, nor possess any ideas of religion. of morality, or of focial intercourfe.

Being married fo young, they feldom get many children, and are old women at thirty years of age. Women of fifty, in Europe, look younger and fresher, than those of thirty at Batavia. They are, in general, of a very delicate make, and of an extreme fair complexion; but the tints of vermillion which embellish our northern ladies, are wholly absent from their cheeks; the skin of their face and hands, is of the most deadly pale white. Beauties must not be fought amongst them; the handsomest whom I faw. would fcarcely be thought middling pretty, in Europe.

They have very fupple joints, and can turn their fingers, hands, and arms, in almost every direction; but this they have in

T

in common with the women in the Weft-Indies, and in other tropical climates.

They are commonly of a liftlefs and lazy temper; but this ought chiefly to be afcribed to their education, and the number of flaves of both fexes, that they always have to wait upon them.

They rife about half past feven, or eight Sclock, in the morning. They fpend the forenoon in playing and toying with their female flaves, whom they are never without, and in laughing and talking with them, while a few moments afterwards, they will have the poor creatures whipped unmercifully, for the mereft trifle. They loll, in a loofe and airy drefs, upon a fofa, or fit upon a low ftool, or upon the ground, with their legs croffed under them. In the mean time, they do not omit the chewing of pinang, or betel, with which cuftom all the Indian women are infatuated; they likewife mafticate the Java tobacco; this makes their fpittle of a crimfon colour, and when they have done it long, they get a black border along their lips, their teeth become black. and their mouths are very difagreeable, though it is pretended that this use purifies the [ 318 ]

the mouth, and preferves from the toothache.

As the Indian women are really not deficient in powers of understanding, they would become very useful members of fociety. endearing wives, and good mothers, if they were but kept from familiarity with the flaves in their infancy, and educated under the immediate eye of their parents, who fhould be affiduous to inculcate. in their tender minds, the principles of true morality. and polifhed manners. But, alas ! the parents are far from taking fuch a burthenfome tafk upon themfelves. As foon as the child is born, they abandon it to the care of a female flave, who generally fuckles it, and by whom it is reared, till it attains the age of nine or ten years. These nurses are often but one remove above a brute, in point of intellect; and the little innocents imbibe, with their milk, all the prejudices and fuperfitious notions, which difgrace the minds of their attendants, and which are never eradicated during the remainder of their lives, but feem to ftamp them, rather with the character of the progeny of defpicable flaves, than of a civilized race of beings. They

They are remarkably fond of bathing ' and ablutions, and they make use of a large tub, for this purpose, which holds three hogsheads of water, and in which they immerge their whole body, at least twice a week. Some of them do this, in the morning, in one of the running streams out of the city.

In common with most of the women in India, they cheristh a most excessive jealously of their husbands, and of their female flaves. If they discover the smallest familiarity between them, they set no bounds to their thirst of revenge against these poor bondswomen, who, in most cases, have not dared to resist the will of their masters, for sear of ill treatment.

They torture them in various ways; they have them whipped with rods, and beat with rattans, till they fink down before them, nearly exhausted: among other methods of tormenting them, they make the poor girls fit before them in fuch a posture, that they can pinch them with their toes, in a certain fensible part, which is the peculiar object of their vengeance, with fuch cruel ingenuity, that they faint away, by the excess of pain. I fhall I shall refrain from the recital of inflances, which I have heard, of the most refined cruelty practifed upon these wretched victims of jealously, by Indian women, and which have been related to me by witneffes worthy of belief; they are too repugnant to every feeling of humanity, and surpass the usual bounds of credibility.

Having thus fatiated their anger upon their flaves, their next object is to take equal revenge upon their hufbands, which they do in a manner lefs cruel, and more pleafant to themfelves.

The warmth of the climate, which influences strongly upon their constitutions, together with the dissolute lives of the men before marriage, are the causes of much wantonness and diffipation among the women.

Marriages are always made at *Batavia*, on Sundays, yet the bride never appears abroad before the following Wednefday evening, when the attends divine fervice; to be fooner feen in public, would be a violation of the rules of decorum.

As foon as a woman becomes a widow, and the body of her hufband is interred, which

which is generally done the day after his deceafe, if fhe be but rich, fhe has immediately a number of fuitors. A certain lady, who loft her hufband while I was at *Batavia*, had, in the fourth week of her widowhood, a fourth lover, and at the end of three months, fhe married again, and would have done it fooner, if the laws had allowed of it.

Their drefs is very light and airy; they have a piece of cotton cloth wrapped round the body, and fastened under the arms, next to the fkin; over it they wear a fhift, a jacket, and a chintz petticoat; which is all covered by a long gown or kabay, as it is called, which hangs loofe; the fleeves come down to the wrifts, where they are fastened clofe, with fix or feven little gold, or diamond buttons. When they go out in state, or to a company where they expect' the prefence of a lady of a counfellor of India, they put on a very fine muflin kabay, which is made like the other, but hangs down to the feet, while the first only reaches to the knees. When they invite each other, it is always with the condition of coming with the long, or the fhort kabay. They all go with their heads VOL. I. Y

heads uncovered; the hair, which is perfectly black, is worn in a wreath, fastened with gold and diamond hairpins, which they call a condé \*: in the front, and on the fides of the head, it is stroked smooth, and rendered shining, by being anointed with cocoanut-oil. They are particularly fet upon this head-drefs, and the girl who can drefs their hair the most to their liking, is their chief favourite among their flaves. On Sundays they fometimes drefs in the European style, with stays and other fashionable incumbrances, which however they do not like at all, being accustomed to a drefs fo much loofer, and more pleafant, in this torrid clime.

When a lady goes out, fhe has ufually four, or more, female flaves attending her, one of whom bears her betel-box. They are fumptuoufly adorned with gold and fil-

\* The English travellers who have visited Batavia, have all admired the taste of this head-dress, which they have thought inexpressibly elegant. When the ladies pay their eveningvisits to each other, the wreath of hair is furrounded by a chaplet of flowers, in which the grateful fragrance of the *nystanthes fambac*, or Arabian jeffamine, unites with the modest iweetness of the *polianthes tuberofa*, and is beautifully intermixed with the golden stars of the *mimulops elengi*. T.

ver,

# [ 323 ]

ver, and this oftentatious luxury, the Indian ladies carry to a very great excess \*.

They feldom mix in company with the men, except at marriage-feafts.

The title of my lady is given exclusively to the wives of counfellors of India.

The ladies are very fond of riding through the ftreets of the town, in their carriages, in the evening. Formerly, when *Batavia* was in a more flourishing condition, they were accompanied by musicians : but this is little customary at prefent, no more than rowing through the canals that interfect the town, in little pleasure-boats; and the going upon these parties, which were equally enlivened by music, was called *orangbayen*.

When I came to *Batavia*, there was a theatre there; but it was given up before my departure.

The coaches used at *Batavia*, are small and light. No one is restrained from keeping a carriage, but all are limited with respect to its decoration and painting. These are scrupulously regulated, according to the

\* See the note in the foregoing chapter, relative to the fumptuary regulations introduced at *Batavia*, of which this feems to be a notorious infraction.  $T_*$ 

¥ 2

respective

refpective ranks. Glass windows to coaches, are alone allowed to the members of the government, who have also the privilege of painting or gilding their carriages agreeable their own tafte.

It is ordained, that a flave fhall run before every wheel-carriage, with a flick in his hand, in order to give notice of its nearnefs, and prevent all accidents; for the flreets not being paved, the approach of the carriage cannot be otherwife eafily perceived.

A yearly tax is paid to the Company for keeping a carriage; but most people hire one, at the rate of fixty rixdollars a month, of the licensed stablekeepers, by whom the duty is paid \*. Counsellors of India, and a few others, of the Company's upper servants, are exempted from it.

Sedan-chairs are not in use here. The ladies, however, fometimes employ a conveyance, that is fomewhat like them, and is called a *norimon*. This is a kind of box, narrower at the top than the bottom, and

\* The annual tax paid by the ftablekeepers, is 80 rixdollars, if hving within, and 50, if without, the city. On a former occasion, the different rates of the duty on carriages, paid by different perfons, have been noticed. **T**.

carried

carried by a thick bamboo pole, fastened over the top. They sit in it, with their legs croffed under them, and have then just room enough to sit upright, without being feen.

The carts, drawn by buffaloes, which ferve to convey goods inland, are of a very fimple, and no lefs clumfy, conftruction. A long pole, which ferves for a beam, goes through an axletree, which turns two wheels, or rather round blocks like quoits, which are fawn out of the trunk of a thick tree, being about four feet in diameter, and having a round hole in the center, through which the end of the axletree is inferted. At the farther end of the beam, there is a crofs piece of wood, of four or five feet in length, with four ftout pegs, which is laid upon the shoulders of two buffaloes, in the manner of a yoke, fo that their necks fit between the pegs, and this ferves both to bear the weight of the cart, and to drag it along. The carts themfelves are fmall, and cannot carry a great weight; they have a covering made of leaves, to preferve the load from the rain.

¥ 3

The

The trade of the Company, as we have before faid, is managed by the director The burthenfome duty of his ofgeneral. fice, is greatly alleviated by two affiftants, who are fenior merchants of the caffle. Their bufiness consists chiefly, in superintending the houfing in the Company's warehouses of all goods which are brought to Batavia by their ships, and the delivery of them again ; all returns on this fcore, are first made to them. The senior of them has the fuperintendence over all the goods that arrive, and the other, over those that are difpatched. Deliveries are made on warrants figned by one of them. All papers, relative to trade, which are received from the out-factories, are examined by them, and they report their contents to the director. They are both likewife administrators of the great treasury, but derive little emolument from it. Their office is one of the most troublesome of any in the Company's civil fervice at Batavia, and is not equally lucrative in comparison with others, to which lefs labour is attached, and whence much greater profits accrue; yet

yet it is an office of much confideration, as it gives the precedency before all other fenior merchants.

All merchandize is housed in the Company's repositories, which are fituated partly in the city of *Batavia*, and partly on the island of *Onrust*, under the direction of administrators, or warehouse-keepers, who must render account of the same.

This branch of bufinefs is divided into feveral departments, each of which has two administrators, two commiffaries, and a bookkeeper. Some of these administrators keeper. Some of these administrators are very lucrative employments, especially that of the island Onrust, on account of the large quantities of goods, which are laid up there. A certain per centage is allowed to all the administrators, upon the whole of the goods which they deliver, for waste, loss in weight, and damage, when the delivery is effected within a twelvemonth after the receipt; but when the goods have lain more than a year in the warehouses, he allowance is greater.

The occupation of the commiffaries at the warehoutes, is to take care that the Company fuffer no prejudice at the receipt

¥ 4

01

or delivery of goods. They are obliged to be prefent at the weighing of every thing, and to be attentive to the accuracy of the weight; an oath of fidelity in the difcharge of their duty, is administered to them, annually, by the council of justice,

The quantity of goods fent from Europe to India, is inconfiderable, in comparison with those which are conveyed from one part of the Indies to another, or to Europe. The chief article of exportation to India, is gold and filver, both bullion, and coined \*.

\* The annual exportation of the precious metals to India, by the Dutch East-India Company, has been calculated at f.6,000,000, or nearly 550,000. T.

THE Company's pofferficns in India, are diffinguished into those fituated to the eastward, and those to the westward of *Batavia*. To the eastward, the government, or province of *Amboyna*, holds the first rank; to it belong the neighbouring islands, and part of the island of *Ceram*. The Company's [ 330 ]

pany's fervants appertaining to Amboyna, are in number about eight or nine hundred.

The only article of trade produced here, is cloves; these are grown in fuch quantities, that the government at *Batavia*, fometimes order a large number of clove-trees to be extirpated, and that no more than a certain fixed number shall be planted.

Thus, by a refolution of the year 1768, they ordered that the propagation of the clove-trees fhould ceafe, till their number was reduced to 550,000; the number of trees, both young, and fruit-bearing, was then 759,040. In the year 1770, an extraordinary fine crop, produced upwards of 2,200,000/bs. of cloves; each pound fcarcely ftands the Company in more than five flivers \*.

Banda is the fecond government to the eaftward. It confifts of feveral fmall

\* On Mr. STAVORINUS's fecond voyage he vifited Amboyna, and has there, in book ii. given a very copious account of it. We refrain, therefore, from making any additions, to his fhort notice of it in this chapter; and fhall only enlarge on those fettlements, which he did not himself touch at, and of which he gives no further, or a very flight account. T.

islands.

# [ 331 ]

islands \*. The number of Europeans in garrison, or otherwise in the service of the Com-

\* The province of Banda is about three or four weeks' fail from Batavia; it confifts of fix fmall islands, which lie close to each other; upon Neira, which is fituate in 4° 30' fouth latitude, stands the chief fettlement of the province; it has a fpacious and commodious harbour, but very difficult to be entered; thips anchor under the cannon of two forts, called Belgica and Nallau; the first stands upon an eminence, and commands the whole extent of the ifland, and of the harbour, as well as fort Nassau; it would however, at least require a garrifon of 100 men to be capable of defence, and the whole number of military in all the islands, fearcely ever exceeds 300; the next island is that of Loniboir, or Banda proper. The refidencies of Wayer and Ocrien, are on this ifland, and it has a fort, and two or three redoubts; the third and fourth in importance, are Puloway and Pulo-run; upon the first of which there is a small fort, and upon the other a redoubt; and thefe four islands, are the only places where the cultivation of the nutmeg-tree is allowed by the Company; the other two are, Razingin, on which there is a redoubt, and to this island the Company often banish their state-prisoners; and Gunnag-api, which has a volcano, constantly emitting fmoke, and often flames. To this government likewife belong feveral other iflands in the neighbourhood, known by the appellations of the foutheastern, and the southwestern isles. Their inhabitants are in alliance with the Company, and furnish a confiderable quantity of provisions, confifting of wild boars, stags, seacows, and other articles of food, which they barter at Neira for piece-goods, and other necessaries. This trade, however trifling, is of much benefit to the inhabitants of Banda; and it

Company there, does not much differ from that at Amboyug.

It has little to fear from enemies, being, as it were, fortified by nature, and almost every where inaccessible, on account of its steep shores. The violent currents, and narrow passages likewise make the navigation very dangerous \*. The Company's states the states of the states

it is fuppofed that the province would reap greater advantages from it, if the Company would allow *Neira* to become a more commercial place; but the fufpicious policy of the government, has always been directed to prevent the frequency of communication with the fpice-iflands, that as little opening might be left, as poffible, for the profecution of a clandeftine trade, or for the knowledge of the fituation, and ftate of defence of these posseficients. *T*.

\* The effablifhment at the ifles of *Banda*, confifted, in 1776 and 1777, of 55 perfons in civil employments, 3 clergymen, 16 furgeons and affiftants; 35 belonging to the artillery; 82 feamen and marines employed on fhore; 283 foldiers, and 40 mechanics: in all 514 Europeans, befides at of the natives in the Company's fervice: yet the orders of the Company require that the garrifon here fhould amount to 700 men. Befides the ufual falaries, the Company allow their fervants at *Banda*, five per cent on the fale of goods imported, and feven per cent furplus-weight on the nutmegs collected;  $\frac{2}{50}$  of which emoluments belong to the governor,  $\frac{7}{56}$  to the fecond in command, and the reft is diffributed by fixed portions among the other Company's fervants; fix per cent is likewife allowed on the nutmegs, and

fhips are obliged to be warped in with the affiftance of many boats.

The. produce confifts in nutmegs and mace; the former, ftand the Company in about one and a quarter fliver per pound, and the latter in about nine flivers \*.

The

and twelve per cent on the mace, fhipped off, for lofs in weight by drying, crumbling, &c.; the profit accruing by which, is divided equally between the governor, and the warehouse-keepers; the governor has likewise an allowance of f.240, or about 221. per month, for table-money. When the English Admiral RAINIER took possession of the islands of Amboyna and Banda, in February and March, 1796, the first, and indeed the only article of the capitulation, was, that " the fenior and junior officers of the civil eftablish-" ment, the clergy, the military, and the marines, should " continue to receive their ufual pay." Notwithstanding the natural means of defence of these islands, they fell an easy prey to the English ; no resistance was made, either here, or at Amboyna, nor was there a fhot fired, or a man killed, on either fide. Т.

\* This is nearly conformable to the prices flated by Abbé RAYNAL, who fays that the Company paid nine flivers per pound for the mace, and one and an eighth for nutmegs; but the fact is, that the planters were formerly obliged to furnish all their fpice to the Company, upon pain of death for felling to any other, at 14 pennings, or  $\frac{7}{8}$  of a fliver, for the found nutmegs; half as much for those which were wormeaten; 8 flivers  $5\frac{1}{7}$  pennings for the mace; and half as much for the dust of mace; but in the year 1778 a violent hurricane

The third government is that of Ternate, to which the island of Tidore is subordinate. The

hurricane having ruined most of the plantations, the price was advanced to  $3\frac{1}{2}$  flivers for the nutmegs, and to flivers for the mace; the charges of fhipping both articles, are about one gilder per cwt.; and taking into calculation, the per centages allowed on the weight, as before mentioned, the invoice-value of each, would be as follows:

1000 lb. nutmegs, delivered by the planters.

70 16. for 7 per cent allowed upon the collection

930 *lb.* paid to the planters, at  $3\frac{1}{2}f$ . per *lb.* f.162.1556 *lb.* for 6 per cent allowed upon the fhipment.

874 16. neat. Charges of thipping, f. 1. per cwt. 8. 15

874 18. nutmegs, therefore, ftood the Company in f. 171. 10

or 151. 113. 10d. fterling, being about  $4\frac{3}{11}d$ . per pound. 1000 lb. mace, paid to the planters, at 10 /l. per lb. f. 500. 0 120 lb. for 12 per cent allowed upon the fhipment.

880 16. neat. Charges of fhipping, f.1 per cwt. 8. 16

880 16. mace, therefore, stood the Company in f. 508. 16

or 461. 55. fterling, being about 12 71d. per pound.

The real quantity of these precious spices, produced in the Banda isles, has never been exactly known. The largest quantity of nutmegs fold by the East-India Company in Holland, at one time, was 280,96416. in the year 1737; in 1756, was fold 241,42716.; and, in 1778, 264,18916.; the average

The garrifon is computed to amount, altogether, to feven hundred men. *Ternate* is not

average has been taken at 2(0,000/b. annually, fold in Europe at seventy-five flivers per pound, befides about 100.000/b. difposed of in the Indies, at no lefs a rate. Of mace, the average fold in Europe has been 00.000%. annually, at f.6 per pound, and 10,00016. in the Indies. Against, however the amazing profits accruing upon these articles, must be confidered, the important expences of the establishment at Banda. Three large thips are difpatched thither, every year, from Jave, with rice and other necessaries. In the year 1779, the charges amounted to f.146,170, and the revenues proceeding from the duties on imports, &c. to f.9,350, leaving a furplus in the charges of f.136,820, or about 12,440!. fterling; although the able and intelligent governor general MOSSEL, in his plan of reform of the Company's affairs in India, calculates, that the revenues of Banda, could be encreafed to f.00.000, taking, at the fame time, the charges of the establishment at f.155,000, by which the ultimate expence would be reduced by one half. These islands, however, can . never be expected to yield any advantage, befides that derived from the fpice-trade. Entirely cut off from all the other parts of India, and deprived of all commerce, fave the trifling bartering-trade we have noticed with the indigent natives of the foutheaftern and fouthwestern islands, they are even destitute of the means of fublistence for their own inhabitants. and must be supplied with every necessary from without. Nature, who has lavishly bestowed upon them, articles of luxury and fuperfluity, has denied them those of indispensable neceffity. Banda is likewise accounted a most unhealthy place, efpecially at the shief fettlement of Neira. Some attribute this circumstance to the neighbourhood of the volcano.

not a fubject of fo much folicitude as the islands just mentioned, for all the spice-trees which it poffessed, are extirpated, and no others may be planted in their flead \*.

This

volcano, in the island of Gunung Api, and others to a deleterious quality in the water.

When Admiral RAINIER took pofferfion of Banda, he found in the treasury 66,675 rixdollars, and in store 84,7771b. nutmegs, and 10, 18716. mace. The English East-India Company fold 30,000%. nutmegs, and 25,000%. mace, at their last spring-fale, which was the first public fale in England of these valuable articles. T.

• The province of Ternate, includes the islands of Ternate, Tidore, Motir, Machian, and Bachian ; which are what are properly the Moluccas; they are the original places of growth of the finer fpices, and larger nutmcgs are still found in the woods of Ternate, than any that are produced at Banda. On the island of Ternate, in one degree north latitude, is fituate Fort Orange, which is the refidence of the governor. The Spaniards had a footing in the Moluccas, as late as the year 1663, at which period they abandoned their establishment at Gammalamma, which was formerly the refidence of the kings of Ternate; and the Dutch East-India Company proving the ftrongeft in their wars, in 1680, with the confederated kings of the Moluccas, the king of Ternate became tributary to them, and the kings of the other islands were fo far rendered dependent upon them, that, in the year 1778, upon fuspicion of their having fet fome machinations on foot against the Company, the two powerful kings of Tidore and Bachian, were de. pofed, and fent in exile to Batavia, and their thrones given to other princes, upon condition of their becoming the vallals of the Company. Some places, fituated in the eaftern part of the

# [ 337 ]

This province cofts more to the Company, than any profits that accrue from it.

the island Celebes, belong likewife to this government; the chief of them are Gorontalo and Manado; and the object of the Company in fettling there, is principally to furnish provisions for Ternate, that part of Celebes being very fruitful in rice, and other necessaries. They also vield a confiderable quantity of gold, about 24,000 taels, of a dollar and a half in weight, yearly, amounting, at cl. per tael, to 120,000l. and efculent birds' nefts, which are efteemed a great delicacy by the orientals, and efpecially by the Chinefe, in exchange for which the inhabitants take opium, Indostan piecegoods, " chiefly blue cloth, fine Bengal coffaes and hummums, together with fome cutlery. Ternate does not, in general, require any supply of provisions from Java, as the isles of Banda do. Some have given as a reason for this difference, that, from the commencement of the dominion of the Dutch in the Molucca islands, the lives of the inhabitants have been spared 3 whereas in Banda, they were all exterminated, under the pretence that they were a perfidious nation, upon whofe engagements no dependence could be placed; and now that the cultivation of the foil there has fallen into the hands of a mixture of Europeans and Indians, either as proprietors or leffees of the fpiceplantations, they have not been able to attend to the propagation of rice or other articles of food. In 1776-1777, the eftablifhment of Ternate confifted of fifty-nine perfons in civil employments, three in ecclefiaftical fituations, ten furgeons and affiftants, thirty-eight belonging to the artillery, 214 feamen and marines employed on fhore, 456 foldiers, and fixty-feven mechanics, in all 847. In addition to his falary, the governor has a yearly allowance of f 2,400, or about 2201, iterling, for the expence of entertaining the native princes; the governor and the fecond in command, have five per cent divided VOL. 1. z equally

it. It is, however, of great importance, to defend the fpice-iflands, to which, together with five or fix other fmall iflands, it ferves as a key. These are properly the *Molucca* iflands.

A few years ago, the English established themselves at a small island, not far distant from *Ternate*, which is called *Sullock*, but they abandoned it again in 1766.

The charges which the Company incur at *Ternate*, amount to about one hundred and forty thousand gilders per annum, and the profits on the goods which are confumed among the natives, to fixty or seventy thousand \*.

This

equally between them, on the fale of all goods imported; and one per cent is allowed on the collection of gold, to be divided between the governor and the collector. T.

\* The Company pay a yearly fum of f.32,250, or nearly 3,000! fterling, to the kings of the Moluccas, in confideration of which, they engage to deftroy all the fpice-trees, which are difperfed through the woods of their extensive islands, and detachments of Europeans are fent out from time to time, to fee that this extirpation be duly executed. The Company do not retain posses of the Moluccas on account of their intrinsic value, but for political reasons, in order to keep other nations from the neighbourhood of Ambyna and Banda, to the fecurity

This island fuffered greatly in the month of August, 1770, by earthquakes. More than fixty violent shocks were felt in the space of four-and-twenty hours, and the fortifications were much injured.

*Macaffer* is the fourth government; it is fituated on the island of *Celebes*, part of which is under the dominion of the Company, while they are in alliance with moft of the native fovereigns of the remainder. The establishment here is equal to those of the beforementioned governments. There are fortress, which are dispersed over the island, to keep the natives in awe; but the chief power of the Company, consists in the policy of fomenting the mutual jealousy of

fecurity of which the possefit of *Ternate* was supposed greatly to contribute. The expences of government at the *Maluccas*, were calculated by the governor general MossEL, at f.144,500per annum, and the revenues at f.90,000; but, in 1779, after the revolution mentioned in a preceding note, the former were found to amount to f.229,406, and the latter to f.114,997, leaving a deficit of f.114,409, or about 10,400*l*. flerling, which is a large fum, when we confider that the mother-country derives no advantage from this fettlement; for the profits on the gold and birds' nefts, beforementioned, are confumed in India, and fcarcely suffice to make good the charge of fending a ship thither, as is done every year from *Basavia*, with stores and necessaries for the government. T.

Z 2

the

the Indian princes, their allies, by which they are prevented from uniting, and are, in confequence, unable to undertake any thing against the Dutch.

The profits of the Company amounted, in the year 1755, to eighty thousand, and their charges to one hundred and fifty-five thousand gilders.

Slaves and rice, are the chief objects of traffic here; but the establishment is likewise confidered of great importance, for the fecurity of the *Moluccas*, and the spiceislands \*.

Upon the island of *Timor*, part of which belongs to the Portuguese, and part to the Dutch, the Company have a small settlement, the profits and expences of which are nearly equal +.

At

\* See the further ample account of the fettlement at *Macaf*fer, in Mr. STAVORINUS'S Second Voyage. T.

+ Timor is an island lying in the direction of N.E. between 8° 40', and 10° 30', fouth latitude; the Dutch fettlement is at a fort called *Coupang*, at the s.w. part of it, in latitude 10° 12' fouth, and in longitude, according to the Dutch charts, 121° 51', eaft, but according to Captain BLIGH, in 124° 41', eaft. The chief of the fettlement has the rank of merchant, with an additional falary of f.2,000, and the establishment confisted in 1776-1777, of ten perfons in civil, and

### [ 341 ]

At Banjermassing, fituated on the fouth fide of the great island of Borneo, the charges and revenues are equally nearly upon a par. Its chief product is pepper \*. Malacca

and two in ecclefiaftical employments, two furgeons, five belonging to the artillery, eight marines, forty foldiers, and three mechanics, in all, feventy Europeans. The N.E. and fouth fides of the ifland belong to the Dutch, whole governor has equally the controul over the neighbouring fmall iflands of Rotti, Savu, and fome others, which are governed by their own native princes, but who are dependent of the Company, and pay yearly acknowledgments of fmall value, confifting principally in wax, which is the chief article produced in their domains. The Portuguese have a small factory, called Liffau. on the north fide of Timor. The charges of the Dutch eftablifhment here, amounted, in 1770, to f. 11,712, and the receipts to f.13,619. And upon the whole, they have been computed to be nearly upon a par.' Timor furnishes a number of flaves for private use, who are of a pliant difposition and temper, and are much employed at Banda, in the cultivation and preparation of nutmegs and mace. The Company likewife receive from Timor a confiderable quantity of fandalwood and beefwax (though the former article is now fcarce), in exchange for piecegoods, on the fale of which five per cent is allowed, in equal proportions, to the two first officers: the profits on this little trade are more than adequate, to make good the charges of the fhip, which is annually difpatched from Batavia, for the purposes of fetching them, and of carrying a cargo of necessaries to the government. T.

\* The factory at Banjermaffing, lies in 3° fouth latitude. There is a small fort, where a junior merchant, as refident, with about twenty-five or thirty foldiers, are flationed. The object

23

#### [ 342 ]

Malacca is the fifth government, and a place of great importance, for it commands the

object of this establishment, is chiefly the collection, or purchafe, of the pepper and rough diamonds, produced in the country. Five per cent on the pepper collected, is allowed to the refident. The contract entered into with the king. obliges him to deliver 600.000 pounds, at three flivers per pound; and this is the only article which induces the Company to retain this possession, for the profits on the rough diamonds, gold, wax, canes, and fago, would not be fufficient to make good the charges. The refrective qualities of these latter articles are also fo inferior, that the trade of the Company in them, is confined to a mere trifle. The circumjacent Indian nations, and the Chinese, carry on a great trade with Bor-The English have some establishments on the north **360**. coast of Bo: neo, but their settlement at Balambangen, was destroyed, in 1775, by the Soloos, and we know not whether it has been reeftablished. They have endeavoured to rear the nutmeg at these places. They fucceeded tolerably in the beginning, but either their plants have degenerated, or they had not originally the genuine kind, for the nutmegs they now produce are much lefs in value, than those which are grown at *Eanda*, and are, in fact, what are called wild nutmegs, being of an oblong fhape, and a lefs fpicy nature than the true ones. Banjerma jing is of no importance to the Company as a fource of revenue, for they do not poffefs a foot of land, without their fort, and are obliged to be confantly on their guard against the infidious attacks of the natives; though, in 1760, an order, which was made in 1754. for all captains of veffels going thither, " not to land all the " cash they had on board for the factory, at one time," was withdrawn; the fort being then thought fufficiently ftrong to withftand

# [ 343 ]

#### the passage through the straits of that name to the castern parts of Asia, as all ships

with f and any affault of the Indians. The charges of this eftablishment, were, in 1779, f. 12,091, about 1,100f. fterling, which, together with those of conveying the pepper to Batevia, are f carcely covered by the profits accruing on this f canty trade.

Landsk and Succadans, are possessions which the Dutch Company have obtained in Berney, by grant from the king of Bentam, to whole crown they were appendages, being provinces formerly conquered by the Bantamefe; in the year 1778, he ceded the entire property of them to the Company. who immediately fent a fhip from Batavia, with an adequate force to take pollellion of them, and enter into a treaty with the fultan of the country. Both these objects having fucceeded, the Company fettled themfelves in a fmall fort, called Puniana, fituated on a river of the name of Lava. The eftablifhment, as may be conceived, is not large, it remaining yet to be proved whether the commerce that may be carried on here, will answer the expence. Between thirty and forty men, are garrifoned here; and, in 1770, the charges amounted to f.q. 726, about 8841 and the profits, which had then been made upon the fale of piecegoods, and other trifles, were no more than f.1,764, about 160! but hopes have been entertained that these places will, in future, be of great advantage to the Company, grounded upon the various articles of trade, which Borneo is known to produce, namely, rough diamonds, camphor, benzoin, canes, iron, copper, bezoar, fago, wax, birds' nefts, gold, &c. Yet, taking into confideration the propenfity of the Borneans to theft, and to illicit trade, as well as that feveral of the above productions are not to be met with, within twenty days' journey, up the country, it may well be doubted, whether any benefit can be fpeedily, or ultimately, derived from these settlements. T.

Z 4

going

going to China, Tonquin, Siam, the Molucca, and Sunda islands, must either pass by here. or elfe through the ftraits of Sunda; both which paffages can be blocked up, by means of the Company's possessions. The whole establishment at Malacca, is computed to amount to five hundred men \*. The revenues and charges of the government are each about one hundred thousand gilders +.

The

\* In 1776-1777, the establishment at Malacca, confisted of thirty-nine perfons in civil, and three in ecclefiaftical employments, feven furgeons and affiftants, fixteen belonging to the artillery, 129 feamen and marines, 262 foldiers, and forty-three mechanics, in all 400 Europeans. The city is fituated in 3° 10', north latitude, and was taken from the Portuguese by the Dutch, in 1640, after a most obstinate defence. It is reprefented as a firong place. It was taken possession of by the English in August, 1795.

+ Governor Mossel flated the charges of this fettlement in his time at f.102,000, and the revenues at f.89,000 per annum; in 1740, however, the former amounted to f. 113,235, and the latter to f. 162, 520, leaving a balance in favour of the colony of f.49,285, or about 4,4801. fterling. This revenue proceeds from the duties laid on imports and exports, a great trade being carried on here by the Indians, and free European merchants of all nations, and from the profits on the goods vended by the Company. Of the export-duty of fix per cent one fourth is allowed, as a perquifite, to the Company's feryants, of which, the governor has forty per cent, the fecond in command fifteen, and the reft is distributed, in different proportions, to the inferior officers. The governor has also an allowance

5

The fixth government in order, is that of the Northeast Coast of Java; the head of which generally refides at Samarang. The Company draw almost all their rice and timber from this province. All the seaports along this coast, as far as Cheribon, where chiefs, or refidents, are stationed by the Company, belong to it. This is faid

allowance of one gilder, about 1s. od. per picol, on all the tin collected. A large quantity of this article, 3 or 100.000%. weight, is purchased here every year, at about f.30 per 100lb. equal to about 56s. fterling per cwt. which is generally difposed of in Asia. In 1778, however, 100,000lb. was fold in Holland at f.40 per 10016. This fettlement likewife yields fome gold, areca, brimftone, and rofin, together with very good mafts, for the fmall veffels which are built at Rembang. and at the island Onruft. Upon all these, the profits are not inconfiderable, as the whole of these articles are in great request throughout the Indies. The commissioners for the trade on both fides of the firait, have five per cent on all purchases and fales, and one per cent on the gold they collect, out of which they must defray their own travelling expences. The territorial extent of this government is not very great; it is confined to the city of Malacca, and the neighbouring fmall province of Pera, where the Company have a fort, for protecting the collection of the tin, which is dug there. 'In 1783, Rio, or Riow, fituated near Malacca, which was the refort of a notorious neft of fmugglers, was fubdued by Commodore VAN BRAAM, and has fince been added to the jurifdiction of Malacca. T.

to

to be at prefent, the most lucrative of all the governments in India \*.

The feventh, is that of the coast of Coromandel. Besides the head settlement, Negapatnam +, all the Company's other factories along this coast, belong to it, These are Sadraspatnam, Palicol, Jagernakpouram and Bemelipatnam ‡. The articles of

\* We refer the reader to the fecond voyage of Mr. STA-VORINUS, for particulars refpecting the Dutch fettlements along the northeast coast of Java. T.

+ Negapatnam is a firong fortrefs, and walled town, in the kingdom of Tanjare, and 11° north latitude. It was formerly the chief fettlement of the Dutch, on this coaft, and coft them much money in maintaining the garrifon and fortifications. In the war of 1780, it was, however, taken by the Englifh, and ceded to them by the treaty of peace in 1783. The flatements adduced below, both of the eftablifhment on the coaft, and of the revenues and expences, are taken from dates preceding this event; none fubfequent to it, have been attainable; nor has it been poffible to afcertain the fpecific proportion of Negapatnam, in either: fo that greater uncertainty muft prevail on this fubject, than in any of our other additions. T.

<sup>†</sup> Our author here omits the fettlement of *Palliacasta*, where the Dutch established themselves as early as 1609, when they built a figure fort, called *Geldria*, and whither, fince the loss of *Negapatnam*, the chief government of their fete of trade which it furnishes, are all forts of cotton piece-goods.

#### Ceylon

fettlements on the coaft, has been transpoled. The fort is in 13° 30' north latitude, the city which adjoins to it lies in the dominions of the Nabob of Arcot. The trade here. and indeed all along the Coromandel coaft, in arack, fugar, Japan copper, fpices, and other articles brought from B tavia, is very brifk. Sadrafpatnam is a town, equally in the dominions of the nabob of Arrest, from whom the Company have farmed it; they have a fortified lodge here, and have frequented this place, fince 1647: it lies in 12° 40' north. Pelicol is a village belonging to the Company, in 16° 40' north, and in the country of Narfepore; together with the two following places, it is fituated in the kingdom of Gelconda. Jagerna pouram, lies in 17° 20' north; the territory upon which it ftands, together with the factory at Daatijerom. and two villages near it, which are used for the bleaching of callicoes and other piecegoods, are the property of the Company; the factory is defended by ramparts of earth. Bemelipatnam, the north latitude of which is nearly 18°, is a place, which the Company hold in farm; they have a new fort here, and the road before it, as well as that at jagernaksouram, is practicable, from December to September. The Dutch Company likewife carry on a confiderable trade at Majulipatyam, and they have a refident at Porto-novo, which is under the nabob of Arcet, for the purchase of cottons, on which they pay an export-duty of one per cent. In 1776 -1777, their establishment on the coast of Coromandel, confifted of 1,175 Europeans; namely, 142 in civil, and nine in ecclefiaftical employments; fourteen furgeons and affiftants; feventy-nine belonging to the artillery; 184 feamen and marines, employed on fhore; 736 foldiers, and eleven

Ceylon is the eighth government, to which likewife belongs Madura, fituate on the opposite shore \*.

This

eleven mechanics, belides 137 natives. The revenues, and the profits on the merchandize difposed of, amounted in 1779, for all these settlements, Negapatnam included, to fA27.131, and the charges to f.452.133. The intelligent Mossel, who was particularly acquainted with the local circumstances of this coast, as he was five years governor of the Company's Coromandel fettlements, calculated that the former might be made to amount to f. 520,000, and the latter reduced to f.260.000. One or two fhips are annually difpatched direct to Europe, with piecegoods, and caliatourwood, the reft go first to Batavia. The value of the piecegoods, fold in 1778, in Holland, was f.2,000,000, about 181,8181. fterling; and of caliatour-wood 200,000 lb. were fold at f.20 per 190 lb. It is computed that twenty-five per cent is gained on both articles. The whole of the Dutch fettlements on this coast are now in possession of the English. T.

\* Ceylen lies between 6? and  $9\frac{1}{2}$ ? north. The ftruggles between the Dutch and Portuguefe, for this ifland, lafted from 1638 to 1655, in which laft year the latter were entirely driven from it, by the lofs of Colombo. This place, which is well fortified, is the chief fettlement, and the refidence of the governor; it is fituated on the weft fide of the ifland, and at the broadeft part of it. Candy, the metropolis of the ifland, and the feat of the emperor, lies about fixteen Dutch miles, inland, from Colombo; it was taken in 1764, by the Dutch, but reftored to the emperor by the fubfequent peace. The diffrict of Colombo extends about twenty leagues in length, and eight in

This extensive island may be faid to be entirely under the dominion of the Company fince

in breadth; it abounds in cinnamon-groves and rice-fields. black cattle and poultry, and is very populous. There is a feminarium at Colombo, for the propagation of the christian religion; and it is computed, that there are 300,000 native chriftians in Ceylon. ) The road of Colombo is unfafe, and only practicable for a few months in the year. Five leagues north of Colombo is Negombo, a fortrefs of lefs confideration, but the cinnamon produced in its diffrict is the beft of the ifland; it likewife yields a large quantity of coir for cordage. Jaffnapatnam is a place of confequence, ftrongly fortified, lving oppofite to, and not far from, the continent of Indostan; it is the capital of what was formerly a kingdom, nearly fixty leagues in circumference: elephants form the only object of trade of this country for the Company; this, however, yields, in general, a profit of f.co.000, about 4550l. sterling, yearly. A confiderable number of these animals are delivered annually to the Company, by the native princes in this diffrict, who are, on that confideration, left in poffetiion of the fovereignty over the country, and the inhabitants. Trinconomale is on the opposite fide of the illand, thirty-five leagues from Jaffnapatnam. Fort Ooftenburg, which stands upon a cliff, projecting about 1,000 paces into the fea, was built by the Portuguefe, with the materials of a famous pagoda which flood there, and was deftroyed by them; the Dutch poffetied themfelves of it in 1630, and, notwithstanding its feeming natural strength, it has not proved fufficient to refift the attack of an European enemy, having been taken twice in the prefent century; its harbour is celebrated as one of the most commodious and extenfive in the world, and it is peculiarly favourably fituated for keeping up a correspondence with the king of Candy, and, of courfe, for engroffing the trade of the cinnamon grown in his dominions.

fince the treaty of peace, concluded, in 1766, with the emperor of *Candy*; for they now poffefs, in fovereignty, all the feacoafts and harbours round the ifland: nothing but the interior parts has been left to the emperor, and he is wholly inclosed in them, without any accefs to the fea, except by passing over the territory of the Company. This is, in fact, the chief, if not the fole, advantage derived from that expensive war, which, it has been computed, cost the Company more than eight millions of gilders \*. The Dutch

dominions. About eighteen leagues farther is Batticaloa, which is a fort of but little ftrength, but on account of the fertility of its diffrict in all kinds of provisions, of fome importance to the Company. Punto Gallo is a fecure harbour. at the fouthern extremity of the island, in the fertile province of Mature, where fome coffee and pepper are produced; in this harbour, all the fhips for Holland are loaden in November and in February, with the various products of Ceylon, and those taken in trade at Colombo, all which must be conveyed to Punto Gallo, to be fhipped to Europe : befides thefe, there are feveral smaller forts, Caliture, Kalpetty, Putelang, Chilan, and Manaar, which ferve chiefly to cover the most open parts of the coaft; and the factories, on the opposite shore of India, appertain also to the government of Ceylon; these are, Tutucoria, Kilcaré, Ponnecail, Cape Comorin, and Mannapaar, where a quantity of piecegoods is collected, and fent to Ceylon. In September and October, 1795, Ceylon, and its dependencies, were reduced by the British forces. T.

> \* About 727,300% sterling. T. embassadors,

•

embaffadors, who were fent to the court of *Candy*, were formerly obliged to conform to the oriental ceremony, of approaching the throne upon their knees; but it was made a condition of the treaty of peace, that this fervile cuftom fhould no more take place, and that they fhould remain ftanding in the prefence of the king.

The chief, and almost the only, produce of this island, is cinnamon\*. The pearl-fishery likewife,

\* Of the various species of the cinnamon-tree, and the manner of firipping the bark, preparing, and fhipping it off, Dr. THUNBERG has given an ample and curious account, in the fourth volume of his Travels. It is grown chiefly in the districts of Colombo, Gale Corle, Negombo, and in the dominions of the king of Candy; it used formerly never to be regularly planted, but was always fought for in the woods, by the choulias, one of the lowest castes of the Cingalese, whose peculiar occupation was the barking of cinnamon : it is, however, now cultivated by the Dutch Company, who have laid out extenfive plantations of it, in the districts of Colombo and Gale Corle. They have proceeded with greater ardour in this plan, fince the last war with the king of Candy, on account of the great decrease in the quantity collected fince, compared with that ufually procured before. Notwithstanding the acquisition of a large extent of territory, at the conclusion of peace, it has been found that, inftead of 8000 or 10,000 bales of cinnamon, of 88 16. each, which was the quantity usually drawn from Ceylon before that war, only 6000 or 7000 bales have been furnished. This deficiency has been ascribed to the illwill of likewife, however, yields the Company, in general, a benefit of one hundred thousand

of the court of Candy, on account of the humiliation to which it was reduced by that war; and although the king is bound. by the conditions of peace, to deliver all the cinnamon produced in his country to the Company, for five pagodas (an Indian gold coin of ninety flivers, or about 8s. 2d. fterling) per bale of 88 12. he either neglects to have the cinnamon duly collected, or fends a great part of it, of an inferior quality, or in an adulterated, or fpoiled flate. The cinnamon which the Company collect, or cultivate themfelves, is computed to ftand them in nearly the fame rate. Befides this precious fpice, fome coffee and cardemoms are the only articles of the produce of the ifland, which are exported to Europe; piecegoods from the factories on the opposite coaft, pepper from the coaft of Malabar, cowries from the Maldives, faltpetre from Bengal, and fome Surat goods, help to form, however, the cargoes of the veffels which are dispatched from Punto Gallo; and in 1778, the fales in Europe, of the imports from Ceylon, were as follow :

600,00016. cinnamon, at about f.6 (115. fterling) per 18.

4,0001b. cardemons, at 33 flivers (3s.)

5,00016. coffee, at 10 -

300,0001b. cowries, at 71 -

20,000lb. cotton-yarn, and

piecegoods to the amount of f. 200,000 (about 18,180%)

A confiderable quantity of cinnamon is also yearly fent to Batavia, for the confumption of the east. The cinnamon found at Ceylon, in 1795, was purchased of the captors, by the English East-India Company, for 180,000l. sterling. In the latter end of 1797, the quantity of 13,893 bales, containing 1,238,968 lb. of cinnamon, was brought to England; and the East-India Company sold 350,000 lb. at their ensuing springsale. T.

rixdollars,

rixdollars, annually. No pearls used formerly to be fished, but upon the oyster-beds of Tutocorin; but they are now likewife got from those on the Ceylon fide, near Manaar, and Aripo. The fifthery, however, does not take place, for certain, every year; for this depends upon the condition in which the beds are found. When the fifting-feafon approaches, the oyfters are examined by the Ceylon council, and if they are found of a proper fize, publication is made, of the time when the pearl-fifthery is to commence, and the number of boats and men, to be employed in it, are determined upon : the number of divers, is, at prefent, ufually fixed at ninety-fix. A certain percentage is allowed, to the governor of Ceylon, on what the Company receive from the farming of this fifhery \*.

## The

\* The advantages which accrued from this fource, amounted only to one hundred thousand gilders, not rixdollars, annually; but the Company have been deprived of them entirely, fince the year 1771; at that period, the nabob of the Carnatic, attacked and took posseful of Marrua, near Tutucerim, whose prince was in alliance with the Dutch; the nabob immediately laid claim to the pearl-fishery, and the Company thought fit to give up the point, and have abandoned it ever fince. The famous VAN IMHOF, in his posthumous elabovol. 1.

## [ 354 ]

The trade of the Company in Bengal, is intrusted to a director, as they possible only a very finall territory there, by permission of

rate memorial respecting the flate of India, confiders Marras, 25 an important barrier or frontier-place of Cerlon. Many precious ftones are found in Ceylon, the principal of which are, rubies, fapphires, topazes, and garnets; different kinds of chrvstals, and quartz, are fold there under the pompous denominations of diamonds, amethyfts, &c. Dr. THUNBERG has given a curious lift of all the kinds which he met with at Ceylon. The digging of them is farmed out by the government; and though trifling, is one of the objects of revenue of the island. These amounted, in 1770, altogether, to f.611,704, while the charges of the whole establishment were f.1.243.028, which makes the expence of the Company in maintaining Ceylor, ultimately amount to f.631,334, or 57,3941. fterling, but this is eafily borne by the immenfe profits attached to the exclusive cinnamon-trade, and the other articles brought from this ifland, as before noticed. In 1755, however, when Mosser drew up his statements, Ceylon appeared in a very different light; he made the revenues and profits amount to f.1.168.000. and the charges only to  $f_{902}$ , soo, by which it appears, that the ifland was then fully able to maintain itfelf. Yet there are many caufes which may be fuppofed to contribute to this difference : the failure of the revenue from the pearl-fifthery; the augmentation of the territory of the Company by the peace of 1766, and confequent increase of their military force, &c. In 1776-1777, the establishment at Ceylon, confisted of, 416 perfons in civil, and 33 in ecclefiaftical, offices, 54 furgeons and affiftants, 315 belonging to the artillery, 615 feamen and marines employed on fhore, 2,397 foldiers, and 243 mechanics, in al', 4,073 Europeans, belides 1,225 natives. T.

the

the emperor of Indostan, or the Great Mogul. It is the fame at Surat. where, as in Bengal. they have a lodge, or factory, for the fecurity of their goods, and their jurifdiction does not extend far beyond its limits. From Bengal, they receive piecegoods, faltpetre, and opium. From Surat, piecegoods, various forts of Indian dreffes. &c.

The Company's possessions on the coast of Malabat. are under a commandant. The chief produce is pepper, which is effecmed the beft of all India \*.

From the west coast of Sumatra, are brought, gold, camphor, and pepper +. Rantam

\* Mr. STAVORINUS enlarges, respecting Bengal, in the next book; respecting Surat, in the 2d and 3d books of his fecond voyage; and refpecting the coaft of Malabar, in the 13th and 14th chapters of the 4th book. T.

+ Befides Lampon, which has been mentioned among the dependencies of Bantam, the Dutch have a fettlement at Padang, on the west coast of Sumatra, to which the factories at Pule Chinco, Priaman, and Adgerbadja, are fubordinate. At Pa. dang, there is a fort, with a garrifon of fifty or fixty men, and the chief of the fettlement has the rank of merchant. Some pepper, camphor, and benzoin, are furnished from this coast. but ever fince the effablishment of the English fettlement at Bencoden, in this neighbourhood, the Dutch complain that pepper is procured in very fmall quantities; they, however, likewife collect and export annually to Batavia, about two thoufand five

A A Q

Bantam is a commandery, from which the Company draw the greatest quantity of pepper.

On the inner, or eastern, coast of Sumatra, they have a settlement at Palembang, whence they receive pepper and tin \*.

Moft

five hundred tials of gold, the quantity never exceeds three thousand tials, nor falls short of two; a tial is twenty-fix penny-weights twelve grains; the purchase price is high, being nearly 31. cs. sterling, per ounce. There is a vein of gold which runs close to Padang, and, fome years ago, it was worked, but not finding returns adequate to the expence, the Company let it to farm, and, in a few years, it fell into fuch low repute, as to be disposed of at a rent of two Spanish dollars, by public auction. In 1779, the books of Padang shewed a balance in favour of the establishment of f.20,902, about 1,000/. fterling, the charges being  $f.\varsigma_{3,675}$ , and on the other hand, the profits accruing on the fale of piecegoods, falt, &c. f.74,577: which is fufficient to defray the expence of fending a fhip thither annually from Batavia, with necessaries for the fettlement. Padang, and its dependencies, are, at prefent, in The whole establishment of the the hands of the English. Dutch on the west coast of Sumatra, including Lampon, was, in 1776-- 1777, thirty perfons in civil employments, five furgeons and affiltants, two belonging to the artillery, thirteen marines, 104 foldiers, and twenty-one mechanics, in all, 175 Europeans, befides ninety-feven natives in the fervice of the Company. T.

\* Palembang lies about ten or twelve days' fail from Batavia. The dominions of the king of Palembang are extensive; they reach as far as the hills of Lampon to the fouthward, and comprehead

Most of the coffee fold by the Company, is brought from their fettlement at Cheribon in Java.

#### One

prehend the island of Banca, which lies opposite to the river of Palembang. This island is celebrated throughout Alia, for the fame cause, its tinmines, to which England owed its celebrity in Europe, in very ancient times, before its arts and arms had foread its fame around the globe. The tinmines in Banca, which were first discovered in 1710 or 1711, have yielded immenfe quantities of ore, and appear inexhaustible. There are feven chief places where it is dug, which are under the direction of Chinese managers, who provide and pay for the labour of the miners, who are also, in general, of that nation. The tin is delivered by these chiefs, to the king of Palembang. for five rixdollars per 125 pounds, and by him to the Dutch for fifteen rixdollars, equal to about c8s. fterling per cws. English. The Company do not, however, always take all that is brought; for in 1770, the government at Batawia, refolved, " not to " receive more than 25,000 picols, of 125lb. each, from " Palembang every year, and as 5,000 picols more, had been " delivered that year, no more than 20,000 should be ac-" cepted in the next, of which due notice should be given to " the king." And yet the Dutch endeavour to prevent the rin from being disposed of to any others, and keep veffels continually cruiting along the fhores, to prevent the fmuggling of it; but their vigilance is eluded, and the commerce is largely participated by private adventurers. RAYNAL and others. state the quantity of tin, received by the Dutch Company, at 2.000,000lb.; but from the above, it appears, that they take, at least, 3,000,000/b. But very little of it comes to Europe : in 1778, 700,000/b. were fold in Holland at f.42 per 100/b.; the greatest part goes to the China-market, where it is preferred

A A 3

One of their most advantageous branches of commerce, is that which they carry on to *Japan*; they fend one or two ships thither every year, and are admitted to trade there, exclusively of all other nations, the Chinese alone excepted.

A fmall island, called Decima, in the

ferred to European tin,..and the profit upon it, is fuppofed, by a late intelligent traveller, Sir GEORGE STAUNTON, not to be lefs, any year, than 150,000/. fterling, though, by the Dutch account of their China-trade, which is given a little farther on, this feems to be an extravagant computation. The king is under strift engagements to the Dutch, to allow them an exclusive trade throughout his dominions, and to deliver all the tin, and pepper, produced in them, at Batavia, fending them thither in his own ships, and at his own expence. The quantity of pepper brought annually from Palembang, is about 2,000,000%. which is purchased at the rate of two stivers The Company likewife take about 1000 per pound. carats of rough diamonds, and a confiderable quantity of cares and rattans. Very few goods are given in exchange for these articles, and a large fum in fpecie is yearly required to balance with the king. In 1779, the profit on the few things difpofed of at Palambang, amounted only to f. 3, 922, and the charges of the fettlement were f.49,677, making it fland the Company for one year in f.45,755, or about 4,160% fterling. In 1771. they rebuilt their old ruinous fort, in a pentagonal form, and the cost of the new one was computed to be f.80, 546, about 7.3221. sterling. Their establishment here, consisted, in 1776-1777, of 115 Europeans, viz. fix in their civil fervice. one clergyman, two furgeons, fixty-one feamen and marines, twenty-nine foldiers, and fixteen mechanics. T.

harbour,

**[** 359 **]** 

harbour of Nangafakki, has been ceded to them; and the merchandize they import is landed and houfed there \*.

This trade is confided to a chief, who is fent out from *Batavia* every two years.

The charges of this eftablishment, amount to full one hundred thousand gilders every year; the half of which, is the value of the annual prefents to the emperor of  $\gamma a pan +$ .

\* Decima, is fituated in  $42^{\circ}$  north latitude. The voyage from Batavia to Japan generally lafts about thirty days. The navigation is very dangerous, and the Dutch have, for the laft hundred years, loft one out of every five fhips that go thither. For an account of the exceffive jealoufy and fufpicion of the Japanefe, and their treatment both of the Dutch and of the Chinefe, as well as of numerous other particulars relative to Japan, and before little known in Europe, the reader cannot be better referred, than to the ample and curious relations, to be found in the third and fourth volumes of Dr. THUNBERG'S travels. T.

† The Company have only about ten or twelve of their fervants refident in Japan. The charges amounted, in 1779, to f.96,356; the greatest part whereof confists, as above, of prefents to the emperor, and the expences of the journey undertaken yearly to *Sede*, for the offering of them: on the other hand, the profits arising from the fale of goods were f.106,802, leaving a furplus of full f.10,000, or nearly 1,000I. fterling'; fo that nothing remains to be deducted from the profits on the returns (for which, fee the next note) but the expences of the ships fent, and the calculated loss, as before mentioned, of one vessel in five. T.

The

The principal articles that are fhipped to Japan, are tortoife-fhells, Baros camphor from Sumatra and Borneo, Dutch woollens, and fugar; in return for which, we receive Japan camphor, copper, china, and lacguered ware \*.

The trade to *China*, generally employs four fhips every year; these are dispatched directly from Holland, and only touch at

\* The two ships which go yearly to Japan, usually take the value of f. 500,000, about \$5,450% in fugar, fapanwood, elephants' teeth, tortoife-shell, camphor, tin, lead, quickfilver, chintzes, cottons, Dutch woollens, vermillion, wax, cloves, nutmegs, pepper, china-root, and fome filver in ducatoons. Their returns confift, for the greatest part, in Japan copper, which is in small bars, of about fix inches long, and about one-third of a pound in weight; of these they receive eight or nine thousand boxes, each containing 1256. which they pay at the rate of f.31 per box, and dispose of it in Bengal, at Surat, and on the coafts of Coromandel and Malabar, for f.oo, and f.g1 : they likewife take about 50,000/b. Japan camphor, two-fifths of which is retailed in India, and the reft comes to Europe; and also a trifling amount in foy, china, lacquered ware, and large filk nightgowns. The private trade of the Dutch officers and fhips' crews to Japan, is also very confiderable, as well as profitable ; they carry out, camphor, china-root, saffron, Venice treacle, Spanish liquorice, ratans, spectacles, looking glasses, watches, manufactured glass, and unicorns' horns (the horn of the meneden meneserse), and receive in return, foy, filks, filk nightgowns, china, lacquered ware, fans, and fine rice. T.

Batavia,

Batavia, in going out, in order to take in a cargo of Banca tin, which is difpofed of to much advantage in China: but when they return to Europe, they only anchor at North Ifland, not far from the straits of Sunda, to take in water, without touching at Batavia. The time when they set fail from Batavia for China, is generally about the beginning of July \*.

The

\* The Dutch factory at Canton, is not, like all their other fettlements, and places of trade, in India, fubordinate to the government at Batavia, but has, for upwards of forty years, been under the management of a special committee of directors in Holland; yet every thing relative it, is communicated to, and transacted in concert with, the government at Batavia. The cargoes of the four or five thips, which the Dutch fend annually to China, amount in value to f.2,400,000; or f.2,500,000, about 225,000/. fterling, one half of which confifts in filver, either in bars, or Spanish dollars, and the other half in tin, lead, pepper, cloves, and nutmegs, upon which articles a profit of, at least, f.660,000, about 60,000/. sterling, is made. For the above capital, the Company's agents purchase between four and five millions pounds of tea, of all forts, and a quantity of filks, nankeens, china, turmeric, &c. We subjoin a list of the quantities of tea, exported in Dutch thips from Ching, for the twenty years between 1776 and 1795:

The Company used formerly to trade to Cochinchina, Tonquin, Siam, Pegu, Aracan, Perfia, and Mocha; but they have now abandoned all commerce with these places. Their connections are, at present, limited to those I have before shortly noticed; and among these, there are several, which, in my opinion, are more prejudicial than advantageous to the Company; especially those in the west of India; which must be associated to a change of times, and of circumstances.

When

When the Company established their commerce in those parts, their rivals were very inconfiderable; the English were not a match for them, and the Indian princes traded rather with the Dutch, than with their neighbours. But this is now entirely altered.

The English, who did not then come into any confideration, are now as strong, and perhaps stronger, in the west of India, than the Dutch Company are in the east. They have prescribed laws to the emperor of Indostan, and are, in confequence, masters of the whole trade of his dominions, especially at *Surat* and in *Bengal*, where the Company used to make important profits, both by the goods which they imported, and those which they exported.

If the fea-rifk, the fhips' charges, and the interest of the money employed, were accurately computed, their present gains, would, perhaps, be found to be extremely trifling.

Not only the English, but almost all the naval powers of Europe, have at present ships trading to the Indies, and establishments

ments of more or lefs confequence, in the weftern parts.

The trade in piecegoods, which in former times, produced fuch confiderable benefit to the Company, is now almost entirely in the hands of the English; at least they are very detrimental to the portion of it that still remains with us, by their competition for purchases.

I shall not fay any thing of the honesty and fidelity of the Company's chiefs at their out-factories: that is out of the line I propose following: when I was in *Bengal*, I had an opportunity of observing fome instances, not very consonant with the above virtues; and it is not many years ago, that the Company had proofs of the like, in the government of the *Coromandel* coast.

On the other hand, the number of officers, and their appointments, remain the fame; and a numerous body of ufeless placemen, and too many military, are maintained by the Company.

If the trade in *Bengal*, at *Surat*, and on the coaft of *Coromandel*, were reduced to the fame regulations, as that to *China* and *Japan*;

Japan; and if, instead of expensive fortifications, trading-houses, or factories, were only retained, the profits, which are actually made, would remain, and the prefent charges, would be amazingly diminished. It cannot, in my opinion, be of any real advantage to the Company, that they pretend to appear as a fovereign state, where they have not an exclusive trade. and where they cannot interdict the trade of every other nation. At Ceylon, Java, and the other islands in the eastern parts. where they have the territorial property, and the fovereign power, it is neceffary both to difplay, and to maintain, their dominion; for there they can, and justly, difpute the right of all others, whether authorized traders or interlopers; but it is money thrown away, to pretend to make a fnew of fovereignty, at the before-mentioned places, for it augments neither their commerce. nor their refources.

The goods which they carry thither, and which cannot be furnished by any other nation, the Dutch being the sole dealers in them, such as the finer spices, and Japan copper, are of a nature, which renders them indifindispensable in the west of India. Their ships loaden with these articles, would be, with pleasure, successively received, and they would speedily and gladly be bartered for cargoes of other commodities.

Moreover, there would be the advantage, that the conductors, having to fuperintend a lefs extensive concern, would the better be enabled to discover, and reform, all errors and abuses : whereas the extent of the object under their controul, affords, at present, innumerable openings for misconduct and mistakes, which undermine the whole superstructure.

The English have not only been very prejudicial to the trade of the Company in the west of India, but have also endeavoured, if not to supplant them in the entire possible of *Ceylon*, at least to participate in the advantages of that rich island.

At the time of the last war in Ceylon, when the Company had blocked up all the harbours, with their ships, and the emperor was nearly reduced to be besseged in his capital, the English sent an embassador from Madras to the emperor, with an offer of assistance to expel the Dutch from his dominions,

minions, for which purpose they would provide a large number of thips. But their own pertinacity was the reason that the alliance was not formed in time : for the embassador would not comply with the oriental cuftom of address, which is especially prevalent in Ceylon, and to which the Dutch were used to conform ; that is. he refused to prostrate himself upon the ground, or fall upon his knees, when he was first introduced into the presence of the emperor. Several weeks thus elapfed before he had an audience; and in the mean time, matters had taken a still more decided afpect in our favour, fo that, the clandestine attempts of our fecret enemies, were, in this inftance, frustrated.

I was exceedingly furprized when I faw at *Batavia*, that, although the trade in piecegoods, and in opium, was prohibited to private individuals of our own nation, the Englifh were not only allowed to bring whole cargoes to *Batavia*; and to difpofe of them there, but were facilitated in every refpect, in the difpofal. Thefe indulgences were not confined to the above, but were extended to all forts of commodities, both Indian

Indian and European, to the great detriment of our own ships' officers and crews. who were not allowed to import their wares; and they who did bring fome privileged goods, were forced to fell them at a lofs, on account of the glut occasioned by the quantities imported by the English. The exportation of fugar too, was likewife prohibited to our own people, but the Englifh were furnished with as much as they asked for, out of the Company's warehouses. Their ships, upon paying for the work done, were allowed to be repaired by the Company's fervants at the island Onrust. In August, 1769, I faw eight English ships, lying at that island, and three more in the roads of *Batavia*. In the following year, however, the government feemed, in fome measure, to have a different opinion; for they then reftricted the English to the taking in of water and wood; which every one hoped might be of long continuance.

The Company have another object of expence, fince the year 1742, which did not perhaps then appear in fo detrimental a light, as at prefent. I mean the premiums which are given to the fhips' crews returning

returning home, and which were allowed as an indemnification for the articles of trade, which, before that time, they were permitted to bring home with them from India; but this was fo much abufed, that the Company's fhips were crammed with the private property of the crews, in fo far, that now and then, a fhip was loft in confequence of being too deeply loaden.

In how far, by putting a ftop to this private trade, fuch accidents have, in reality. been prevented, may be best feen, by comparing the number of the thips loft, for thirty years, before the year 1742, with those lost fince. For my own part, I believe, that very little difference would be found. It is of courfe, that the veffels, loft in Table Bay, or other roads, which cannot be attributed to overloading, must not be taken into the account. The Company have already expended the fum of eighteen millions of gilders, in these premiums, as will appear from the rough calculation fubjoined, in which I have taken rather too little than too much.

The premiums for every fhip returning home (estimating the crews, one with anvol. 1. **BB** other, other, at one hundred and twenty hands, for each ship) amount to full f.18,000, as follows:

I	captain, receives for premium f	.2,000					
1	captain's mate	500					
I	fecond mate	400					
I	furgeon	400					
2	other mates, f.300 each .	600					
I	chaplain	300					
20	under-officers, one with an-						
	other, f. 200 each .	4,000					
24	24 feamen, earning upwards of f.10						
	monthly wages, f.150 each	3,600					
66	ditto, and boys, under f.10						
	f.100 each	6,60					
* * *	7 men						

117 men

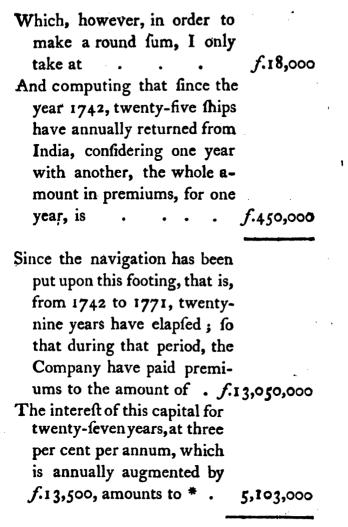

3 fuppofed to have died on the other fide of the Cape of Good Hope, who receive nothing.

120 men

So that every fhip's crew receive for premiums . .

. f.18,400

Which,

\* Instead of simple interest, at three per cent per annum, for twenty-feven years, we should take compound interest.

So

## So that the Company have lost a fum, for which they have no adequate benefit, of . f.18,153,000

May not the decay of Batavia, whole chief support is the free trade of its inhabitants, be, in some measure, likewise afcribed to this caufe ? People well worthy of credit, who have lived for forty years, and more, at Batavia, have affured me, that there is an inconceivable difference between the actual state of the city, with respect to trade, and its flourishing fituation, before the year 1740. Free inhabitants, who had never been in the fervice of the Company, used then to return to Europe loaden with riches, very few inftances of which occur at present. Here in Holland, we may, in confequence, plainly perceive, that there is little chance of making money at prefent, at Batavia, by private trade, and it is well known, that it grows worfe from day to day.

at the fame rate, for twenty-nine years, which would amount to f.7,316,500, and the whole furm loft to the Company, during that period, by this regulation, would be f.20,366,500, or about 1,851,500. T.

It

It is true, that the Company at home, are unable to reform all the abuses, which have crept in, from time to time, in fuch an extent of territory, as they posses in the Indies; but they are too well acquainted with the actual state of Batavia; and the prosperity, or decay of that city, which is the center, and, as it were, the pivot of all their possessions, is of too great and real importance to their interests, than that they ought not to endeavour to raife it out of that languid state, into which it is progreffively falling.

Another thing, which is a great drawback upon the profperity of Batavia, is the unhealthiness which has been perceived there, for feveral years back. The most probable cause hereof, may be sought, in the great encrease of the mudbanks, along the feacoaft; the water only just covers them; or they are flooded by the tide, which, when it recedes. leaves a thick flime behind it, together with a great deal of animal matter, thrown up by the fea, various kinds of blubber, and other marine productions, which immediately putrify, by the burning heat, and contaminate the air, uniting uniting with the noxious exhalations of the fwamps and moraffes near the town. The opinion, that the unhealthine's of the place may be chiefly attributed to this caufe, feems to be corroborated by the circumftance, that the ravages of fickne's and death, are much le's in the upper parts of the city, which lie the fartheft from the fea, than in and near the caftle, which is close to the mudbanks, and fwamps. The mud thus thrown up, already reaches, on the eaft fide of the river, more than two thou fand feet out from the dry ground.

I have already faid fomething of the province of *Jaccatra*; namely, that it is a poffeffion of the Company, fubdued by their arms, whofe natives are their immediate fubjects, governed by the council of India, and more particularly under the eye of the governor general.

A perion is appointed by the governor, under the title of commillary of inland affairs, who represents the fovereign, in the interior of the country.

He adjusts all differences which arise between the native grandees, with the preknowledge of the governor general, and exacts all

all penalties and fines which are kaid upon them, the greatest part of the profits by which, accrue to him. He is feared and respected, like a prince, in the interior parts, as the happiness of every individual, is almost entirely in his power.

The regents, who are his coadjutors in the administration of the land, are taken from among the natives. The first in rank, are the *adapatis*, to whom the goyernment of a large district is entrusted. Then follow the *tommagongs*, who are, however, much lower in rank, having the direction over a proportionate smaller extent of country; although each of them stands alone in his local jurisdiction. These have *ingbebées* under them, who are as much as lieutenants, and before whom disputes of little importance, between the inhabitants of their districts, are setued; yet the parties may appeal to the commission.

It is only when very important matters occur, in which the Company have a particular intereft, that they are brought to the cognizance of the government at *Batavia*, and fettled by them; but this does not often happen.

The

The commiffary, who refides without the city, has a guard of natives every night at his houfe, and twenty, or twenty-four armed attendants, who are Javanefe, and ftand ready to execute his commands; all being in the pay of the Company.

The chief productions yielded by this province, are fugar, coffee, indigo, and cotton-yarn. The revenues which the Company draw from it, amount annually to full one million of gilders.

The original letters, which are written by the council of India, to the Indian princes, are composed in the Dutch language, and figned by the governor general, and by the fecretary, in the name of the government; but translations are always added, in the Malay, Javanese, or whatever other language be that of the prince, to whom the letter is addressed. For this purpose, there are several translators at *Batavia*, who are well paid, and have the rank of merchants.

The letters, which are fent by the Indian princes, to the government, are written upon upon gold, or filver, flowered paper \*, and are brought to the council with much ceremony.

The letter which the emperor of Candy

\* In the eastern parts of India, paper is prepared from the bark of trees ; at Cevion, and on the adjacent continent. the leaves of the boraffus palm-tree (boraffus flabelliformis). and fometimes of the talpat-tree (licuala (pino/a), are used instead of paper. The leaves of both these palm-trees, lie in folds, like a fan, and the flips stand in need of no further preparation, than merely to be feparated, and cut fmooth with a knife. Their mode of writing upon them, confifts in engraving the letters with a fine pointed fleel : and in order that the characters may be the better feen and read, they rub them over with charcoal, or fome other black fubflance. The iron point made use of for a pen, is either set in a brass handle, and carried about in a wooden cafe, of about fix inches in length, or elfe it is formed entirely of iron; and together with the blade of a knife, defigned for the purpose of cutting the leaves, and making them fmooth, fet in a knifehandle, common to them both, and into which it fhuts up. When a fingle flip is not fufficient, feveral are bound together, by means of a hole made at one end, and a thread on which they are ftrung. If a book be to be made, they look out principally for broad and handfome flips of talpat-leaves, upon which they engrave the characters very elegantly, and accurately, with the addition of various figures, by way of ornament. All the flips have then two holes made in them, and are ftrung upon a filken cord, and covered with two thin lacquered boards. By means of the cords, the leaves are held even together, and by being drawn out when they are wanted to be used, they may be separated from each other at pleasure. T.

fent

fent to the government at Batavia, after the conclusion of peace, containing the full powers of his embaffadors to negociate concerning certain matters, which could not be adjusted at Ceylon, was written upon a leaf of beaten gold, in the shape of a cocoa-leaf; the letters were engraved upon it, with a steel pen, in a most curious manner. This leaf was rolled up, and inferted in a cylindrical cafe of gold, which was wound all round with a row of pearls, ftrung upon gold thread. This cafe was in a box of maffy gold, and this again in one of filver, which was fealed with the emperor's great feal, imprefied in red wax. The filver box was inclosed in one of ivory, which was put in a bag of rich cloth of gold; and finally, a bag of fine white linen, fealed up, with the emperor's leffer fignet, encircled the whole.

When these embassions had their audience of the council of India, they were received with extraordinary honour; all the members of the assembly standing up, both when they came in, and when they went out, though without uncovering their heads. When the embassions left *Batavia*, they were were each prefented with a gold chain, by the council.

All goods, which are carried into, or out of *Batavia*, are fubject to duties, which are levied at the bar, at the entrance of the city. Thefe, as well as the other taxes and imposts, are annually farmed out, generally to Chinefe. The whole of them amount together, upon an average, to 32,000 rixdollars, or f.76,800 per month, making f.921,600 per annum \*.

Of the feveral islands which lie before **Batavia** †, there are no more than four, which are made any use of, by the Company, and of these, that of Onrust is the principal. This island lies about three leagues N.W. from Batavia; it is nearly round; it rises fix or eight feet above the surface of the water, and is of small extent, being about

\* About \$3,800/. fterling. T.

† They are, in all, fifteen in number, and have the following names given to them: Onruft, de Kuiper, Purmerend, Engels Onruft, Rotterdam, Schiedam, M.ddleburgh, Amfterdam, Horn, Harlem, Edam, Enkbuizen, Alkmaar, Leyden, and Vader Smit. The two first are the innermost, and are fronting, and within fight of the city. T.

four

four thousand eight hundred feet in circumference. In the center of the island, and within a fort, confisting of four bastions, and three curtains, stand the warehouses and other buildings. On these fortifications, and on three small outworks, which are constructed at the water's edge, the walls of all which are whitened with lime, are mounted fixteen pieces of cannon, of various fizes \*.

In the year 1730, under the government of the governor general DURVEN, a fmall church, with a steeple, was crected here; where fervice is performed on Sundays by a

\* " The fortified island of Onruft," fays Captain PARISH, " is well fituated to command the channel that affords the " principal passage into the road. The work upon that island " was of a pentagonal form; its baftions were fmall and low. " not more than twelve feet the higheft; and not always " connected by curtains. A few batteries were lately con-" ftructed on the outfide of this work, that bore towards the " fea. On these, and on the bastions, about forty guns " were mounted, in different directions. South of this, was " another island" (this must be that called de Kniper), "at 44 the diftance of a few hundred vards, on which two bat-" teries, mounting together twelve guns, had been lately " erected." This account dates in 1793, and proves that the Dutch have become fenfible of what is alleged in this work, page 253, that the fortifications at the mouth of the river, are infufficient to protect the road. **T**:

clergyman,

clergyman, who comes hither from *Batavia*, for that purpole, every week.

The Company have here ten or twelve large warehoufes, which are almost always quite full of goods; pepper, japan copper, faltpetre, tin, caliatour-wood, fapan-wood, &c. They are under the direction of two administrators, who, as we have before mentioned, have very lucrative places.

On the north fide of the ifland, ftand two fawmills; and on the fouth fide, there is a long pier-head, on which are three large wooden cranes; erected for the purpofe of fixing mafts in fhips, or unftepping them. Three fhips can lie here, behind each other, alongfide of the pier, in deep water, to be repaired, or to receive or difcharge their cargoes. There is another pier, a little more to the weftward, called the japan pier, where one more fhip can lie, to load or unload.

There is twenty, and more, feet water against the piers, and it rifes and falls, about five feet, once in four-and-twenty hours. All the Company's ships that require it, are hove down at the wharfs along the piers, and receive receive every necessary reparation with ease and dispatch \*.

The government of the ifland, and the direction over the repairs of fhips which take place here, is intrusted to a master-carpenter, who has the management of every thing, except what relates to the departments of the administrators of the warehouses. His office is esteemed a very prostable one, and he has the rank of senior merchant. Though the island is but small, the number of people dwelling upon it, is supposed to be near three thousand, among whom there are three hundred European workmen.

About fixteen hundred feet from Onruft, is the ifland *de Kuiper*, or *Cooper*'s Ifle, which is one-third loss in fize than the former. The Company have several warehouses upon it, in which coffee is chiefly laid up. There are two pier-heads, where vessels may load and discharge, at its fouth fide. There

" if twould be injuffice," fays Captain Cook, " to the
officers and workmen of this yard, not to declare, that,
" in my opinion, there is not a marineyard in the world,"
" where a fhip can be laid down, with more convenience,
" fafety, and difpatch, nor repaired with more diligence and
" fkill." T.

are

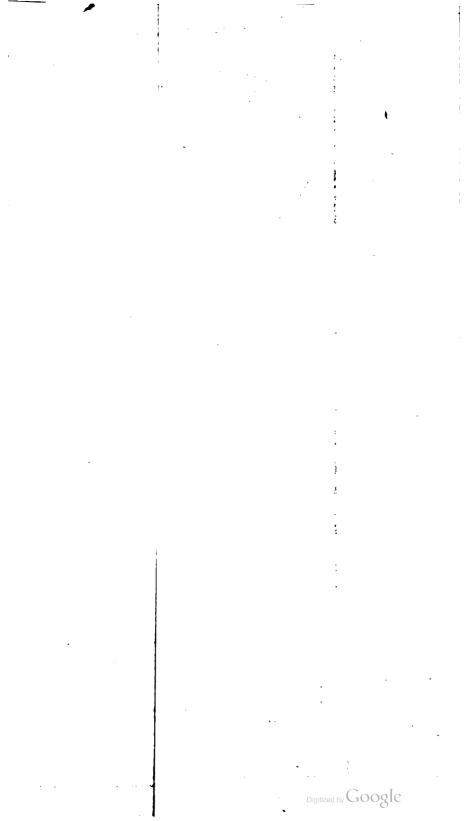

are feveral large tamarind-trees interfperfed over the island, which afford an agreeable fhade. The workmen who are employed here in the daytime, are fetched away at night to Onrust, and only two men remain behind, as a watch, together with a number of dogs, who are remarkably fierce, fo that no one dares to fet his foot on the island at night.

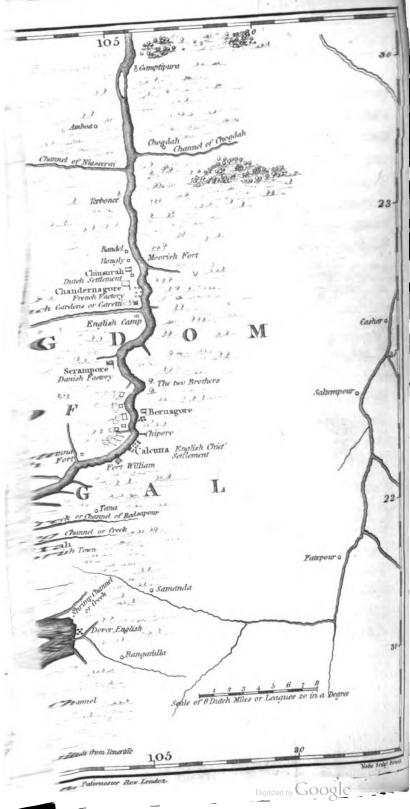

To the eaftward of Onruft, and at twice the diftance of Cooper's Ifle, is the ifland Purmerend, which is half as large again as Onruft. It is planted with fhady trees; and in the center is a building, which ferves for a hofpital, or lazaretto, for perfons afflicted with the leprofy, or other incurable difeafes, who are fent thither from Batavia. It is fupported by the alms of both Europeans and Javanefe, but the latter contribute the largeft fhare.

The ifland of *Edam* lies about three leagues **N.N.E.** from *Batavia*. It is about half an hour's walk in circumference. It is very woody, and has abundance of large and ancient trees. Among them is one, the trunk of which is fo large, that twenty men, with their arms extended, are not enough to encompass it; its outward branches shoot downdownwards, and taking root, as foon as they reach the earth, grow up again into trees; I faw fome of them that were already two feet thick; it is effeemed holy by the Javanefe, and is much venerated by them \*. The Company have fome warehoufes on this ifland, for falt; but the chief ufe they make of it, is as a place of exile for criminals, who are employed in making of cordage; and over whom a fhip's captain is placed as commandant.

\* This is the banian-tree, ficus indica, or Indian fig-tree. I.

# BOOK III.

## OBSERVATIONS RESPECTING BENGAL.

#### CHAPTER I.

Situation and Extent of BENGAL.—Seafons.—Weather.— Observations respecting the Degrees of Heat.—Monscons.— Nature of the Country.— Productions.—Soil.—Trees.—Uses of the Cocoanuttree.—Fruit-trees.—Vegetables.— Tanks.—The River GANGES.—Channels communicating with it.—Sandbanks at the Entrance of HOUGLY River.—Currents.—Rise and Fall of the River.— The Water of it muddy.—How clarified for drinking. — Reputed Sanctity of the GANGES.—Pilgrimages to it from all Parts of India.

THE kingdom of *Bengal*, which is the most eastern province of the empire of Indostan, is bounded, on the fouthwest, by the kingdom of *Orixa*, on the west, by the province of *Malva*, on the north, by *Mongheir*, and *Bahar*, on the east and foutheast, by the kingdom of *Aracan*, and on the fouth, by VOL. I. CC the the deep gulph, which is called the Bay of Bengal. It is computed to be full ninety leagues in length, from the fea, to Rajamabel, and nearly as much in breadth.

It lies between the twenty-first and twenty-feventh degrees of north latitude, and thus between the fame parallels as the *Canary* islands. Its medium longitude is 105° east from *Teneriffe*, the fun being on the meridian almost five hours and a half fooner than at *Amsterdam*.

The year is divided into two feafons, which are called the warm and the cold feafons.

The cold feafon commences in the month of November, and lafts till the beginning of February. Raw northerly winds are then very prevalent, which bring with them a degree of cold, fo that fometimes, in the morning, before funrife, thick clothes are very comfortable. It is then likewife frequently very foggy, but the mift is diffipated about eight or nine o'clock, when the fun begins to be powerful. For the remainder of the day, the fky is perfectly fine and clear, fo that no clouds whatever appear in the air, for many days together.

**The** 

The beginning of this feason, is the time for collecting the best fruits of the field, and the land appears reanimated, in proportion as the burning heat diminishes.

In the beginning or middle of February, when the fun begins to approach the line, the heat likewife augments from day to day. The winds, which, for feveral preceding months, had blown from the north, begin to fhift, become variable, and run round to the fouth and fouthweft, whence they continue to blow till September or October. The fky begins to become cloudy, and the weather is, at funfet, fhowery and ftormy, frequently burfting out in violent fqualls, accompanied by heavy fhowers of rain, thunder, and lightning.

I have feen hailftones, and pieces of fleet, which fell in *Bengal*, in the month of February, and were as large as a pigeon's egg.

The rainy feafon commences in May, and continues to the latter end of August. The heat is, at that time, insupportable.

As foon as the fun has again paffed the line, the heat begins to decrease, till, in the month of October, it is tolerably moderate.

I observed the degrees of heat, nearly every day, by a thermometer of Fahrenheit, from the beginning of October, till the beginning of April. The thermometer was hung in the open air, against a wall, facing the north, and there were no buildings opposite, by which the rays of the fun could be reflected. The greatest degree of heat, was generally about two o'clock, or half past, in the asternoon, and the least, about an hour before funrife, in the morning.

In October, the greatest heat, in the afternoon, was  $94^{\circ}$ , with a northerly wind, and clear sky; the least heat, in the same month, in the afternoon, was  $85^{\circ}$ , wind and weather as before; the lowest degree, before funrife, with a northerly wind, was  $70^{\circ}$ .

In November, the higheft, in the afternoon, 89°, wind northeaft, a clear fky; the loweft, in the afternoon,  $81^{\circ}$ , wind north, clear weather; and the loweft, before funrife,  $60^{\circ}$ , wind north, foggy weather.

In December, the higheft, in the afternoon,  $88\frac{1}{2}^{\circ}$ , wind caft, a clear fky; the loweft, in the afternoon,  $76^{\circ}$ , wind north, clear fky; and the loweft, before funrife,  $52^{\circ}$ , wind north, clear weather.

In

In January, the higheft, in the afternoon, 85°, wind fouthweft, clear fky; the loweft, in the afternoon, 74°, wind north, clear fky; and the loweft, before funrife, 63°, wind northeaft, clear weather.

In February, the higheft in the afternoon, 92°, wind fouth, clear fky; the loweft, in the afternoon, 76°, wind weft, cloudy; and the loweft, before funrife, 68°, wind fouth, clear weather.

In March, the higheft, in the afternoon, 104°, wind fouth, clear fky; the loweft, in the afternoon, 93°, calm, and cloudy; and the loweft, before funrife, 72°, wind fouth, clear weather.

On the 3d of April, when we failed down the Ganges, the thermometer flood, at three o'clock in the afternoon, at 101°. I then caufed it to be let down into the river, five or fix feet under the furface of the water, and drawing it fuddenly up again, I found that the mercury had fallen to 86°. Upon hanging it up in its place, it fell, two minutes afterwards, to  $83^{\circ}$ , but it rofe again, by degrees, in the fpace of feven minutes, to  $98^{\circ}$ . Some obfervations were communicated to me, which were made in the c c 3 month month of May, 1769, by which it appears, that the mercury then role as high as 110°; and a gentleman of my acquaintance, who was at *Patna*, in that month, informed me, that there it had even rifen to the top of the tube.

The winds generally blow here, throughout the year, either direct north, or direct fouth; part of the year from the one point, and the remaining part from the oppofite point. The fame wind which prevails at land, blows likewife at fea, along the coaft of *Coromandel*, and the Bay of *Bengal*.

When the monfoons break up, that is, when the wind varies from the north to the fouth, or from the fouth to the north, the change is often accompanied by violent fqualls, and whirlwinds. When one of these rages remarkably fierce, it receives the denomination of the *elepbant*; and it is fcarcely poffible for a fhip, when overtaken by one of these tornadoes, to brave its fury.

In the year 1754, in the month of October, five of our Company's ships, which were at anchor in *Fultab* roads, were forced on shore, and bulged, by this dreadful hurricane; a fixth, which was equally driven on

on fhore, was got off again with difficulty. The change of the monfoons, however, formetimes takes place, without any of these ftorms arising from it.

Bengal is a low and flat country, and very fertile, in which it excels every other country of Afia. It provides many of them with rice, and other provifions \*; and furnifhes various important articles of commerce, cottons, filk, faltpetre, opium, &c. which are exported both to other parts of the eaft, and to Europe.

Befides rice, which is the bread of the natives, both here, and throughout the reft of India, *Bengal* produces also very good wheat, which used formerly even to be fent to *Batavia*; but this is now prohibited, in order to favour, as much as possible, the corn-trade of the *Cape of Good Hope*.

The foil is rich and loamy, and is eafily cultivated. No manure is ever used, although the ground be fown every year; for

\* Bengal furnishes provisions for most of the neighbouring countries; it provides the inhabitants of the mountains of Ca/hmere, and of the elevated plains of Tbibet, with both rice and wheat, in return for their shawls, gold, and musk. The emperor AURENGZEBE emphatically styled it, the Paraaije of Nations. T.

the

the heavy rains and inundations fatten the land. Bad harvefts occur very feldom. Befides the extensive forefts, and fmaller groves, which are met with at intervals, the country abounds in fingle trees, fcattered over the face of it. None of the forts which flourish in Holland, are feen here.

There is one kind, which deferves particular notice. It is the fame, which I have already mentioned, as growing on the ifland *Edam*, before *Batavia* (the banian, or Indian fig-tree), the branches of which tend downwards, and taking root, fhoot up again into trees. The Bengalefe are, equally with the Javanefe, impreffed with the idea of the fanctity of thefe trees.

Various kinds of fruit-trees flourish here, among which the cocoanut-palm /deferves the first place; not fo much, because it is produced in great abundance, as on account of its universal utility; for there is no tree in India, and probably none in the world, that contributes fo much to supply the wants of man, as the cocoanut-tree.

It is propagated from a ripe nut, and in a few years, erects its ftraight and lofty ftem, above the other trees of the grove. When full

full grown, it is generally fourteen or fifteen inches thick, all the way up. It grows to the height of fifty feet, and higher, without fending forth any branches, than at the top, where it expands into a leafy crown, confifting of tender branches, or fhoots, which have nothing ligneous in them, and to which the thick leaves are attached, in pairs; thefe are about two feet long, and three inches broad, they gradually grow finaller towards the extremities of the branches, which end in a pointed leaf.

The nuts are produced upon the tender branches, close to the stem, and grow in bunches of five or fix.

When the fruit is green, it is filled with a pleafant, fweetifh liquor, which is very cool, and refrefhing, and is much drank in the Indies, both by the natives, and by Europeans. When it begins to be riper, the juice thickens, and adheres to the fhell in a kind of creamy pulp, which is very refrefhing as well as nutritive, and is called *liplap*. When the nut is quite ripe, the infide becomes a hard and white kernel, and, in this ftate, it is often brought to Europe.

When this white kernel is boiled and preffed,

1

preffed, it affords an oil, which is used inftead of butter by the Indians, wherever the cocoanut is produced, throughout the east. It has much refemblance to oil of almonds; but when it has stood for a few weeks, it loses its pleasantness, and becomes rank; it then, however, ferves for grease, or to burn, or for other necessary uses.

The hard shell is made into drinkingvessels, and used for a variety of domestic purposes.

The fibrous integument that furrounds the fhell, is ufed, inftead of hemp, for the manufacture of cordage, which is called *coir*, and is brought, in confiderable quantities, from *Ceylon*, and the coaft of *Malabar*, to *Batavia*. Cables are even made of it, of twenty, and more, inches thick, which are found to be as good, and, in fome cafes, better, than European ones of hemp. By their lightnefs, they float upon the water, and by their elafticity, they are capable of great extension and contraction \*.

The

\* Captain THO. FORREST gives his teffimony to the excellence of the coir for cables; " being elastic, it gives fo \* much play to a ship that rides hard at anchor, that, with a " cable The leaves are used by the natives for roofing their houses, or huts, in the room of straw, or tiles. They are likewise used to write, or rather to engrave, upon, with an iron pin.

The wood of the stem, is used for firewood, and cannot be employed in any other way, on account of its brittlenes.

The other fruit-trees, are mangos, guavas, mulberry-trees, lime-trees, and a few orange-trees. The *pifang*, or banana, is alfo produced here, but not in large quantities. Likewife the *furi*-tree, which affords, by incifion in the ftem, a clear and fweet juice, which is collected in pots, and . forms an agreeable liquor, of an intoxicating quality; in a few days, however, it fpoils, and turns four; it is then ufed as vinegar.

Many kinds of vegetables, which are natives of other climates, are cultivated in gardens here, peas, beans, falad, purflane,

<sup>66</sup> cable of one hundred and twenty fathoms, the fhips retire
<sup>67</sup> or give way, fometimes half their length, when oppofed to a
<sup>66</sup> heavy fea, and inftantly fhoot a head again; the coir-cable,
<sup>67</sup> after being finedrawn, recovering its fize and fpring.
<sup>66</sup> Hempen cables are firong and flubborn, and fhips often
<sup>66</sup> founder that ride by them, because nothing firetches or
<sup>66</sup> gives way; the coir yields and recovers." T.

spinage,

fpinage, all forts of cabbages, radifhes, afparagus, and others; but they are only to be had, during the colder feafon, and require great attention and care in the rearing of them; they muft be watered twice a day, or they would dry up, and come to nothing. In the warm feafon, nothing of the kind is feen, except fome fpinage and cucumbers.

Throughout the land, where it is inhabited, numerous refervoirs, of an oblong fquare fhape, but of various fizes, are dug in the earth; they are frequently more than an acre in extent; they are called *tanks*. They are filled with water in the rainy feafon, and afford the inhabitants, during the following dry months, a provision of water, of a better quality and appearance, than that of the *Ganges*, which is always thick and muddy.

There is a fort of fifh, which is found in these tanks, which, in taste, has much analogy with our carp.

The river Ganges runs through the middle of Bengal. It derives its fource, it is faid, from the mountains of Thibet; but a French ecclesiaftic of Chandernagore, who had been a miffionary for feveral years in Thibet, Thibet, affured me, that the fources of the Ganges, are not to be found in that country, as he had taken the greatest pains to difcover them; the inhabitants too, informed him, that they were situated much farther to the north\*. The river runs in a southeast

\* Amongst other etymologies, the name of the river Ganges, has been derived from Gang, which in Persian, as Wanka in the Hindoo dialect, fignifies winding, arched, bent : the remarkable finuofities of the river, give great probability to this derivation. Refrecting the true fource of the Ganges. much uncertainty ftill prevails. In vain, one of the most powerful fovereigns of Indostan, the emperor ACBAR, at the close of the fixteenth century, fent a number of men, an army of discoverers, provided with every necessary, and the most potent recommendations, to explore the course of the mighty river, which adorned and fertilized the vaft extent of his dominions; they were not able to penetrate beyond the famous mouth of the cow; this is an immense aperture, in a ridge of the mountains of Thiket, to which the natives of India have given this appellation, from the fancied, or real, refemblance of the rocks, which form the stupendous chasm, to the mouth of an animal, efteemed facred, throughout Indoftan, from the remoteft antiquity : from this opening, the Ganges, precipitating itfelf into a large and deep bason, at the foot of the mountains, forms a cataract, which is called Gangotri; the impracticability of fcaling these precipitous rocks, and advancing beyond this formidable pafs, has prevented the tracing whence this rufhing mais of water takes its primary rife; outtaranam, is the Sanfcreet verb, to make a leap, Gangotri, therefore, means the leap, or full of the Ganges; this cataract is east direction, through the empire of Indostan. It feparates into two great branches, a few leagues above *Caffimbazar*; the eastern arm, is again divided into feveral fmaller branches, the principal of which runs past the city of *Dacca*, and falls into the fea, at *Chittigong*. The other, or western arm, which is generally called the river of *Hougly*, runs past *Bandel*, *Hougly*, *Chinfurab*, *Chandernagore*, *Calcutta*, &c. and falls into the Bay of *Bengal*, at *Ingellee*.

is fituated in 33° 5', north lat. and about 75° east long. from Greenwich. The Ganges has been supposed to extend much farther north, beyond Gangotri; but here, all is uncertainty, and darkness. In Major RENNEL's map, followed, for this part of it, from one of Thibet, made by the Chinefe lamas, lent by the emperor CANGHI, to difcover the fource of the Gauges. and corrected and published by the celebrated DANVILLE, the river is made to take its rife in the Cataifian mountains, and paffing through two lakes, to run in a westerly direction towards Gangeiri; but M. ANQUETIL DU PERRON, in his Recherches Hiftoriques & Geographiques fur l'Inde, undertakes to prove, that the river, here taken to be the Ganges, from the reports of the Chinefe lamas, is, in reality, the Gagra, or Dervai, which falls into the Ganges, at Fatepore; and that the true fource of the Ganges, is still wholly unknown to the Europeans : indeed Major RENNEL acknowledges, that he confiders this part of the map of the Chinese lamas, as extremely vague, but that he was obliged to make use of it, for want of better materials, and that a vaft field still remains for the perfectioning of Afiatic geography. T.

The

The country is every where interfected, with large and broad channels, which all run into the *Ganges*. All merchandize is conveyed, by means of these passages, with great facility, from one place to the other, throughout the land, and the chief branches of the river communicate hereby with each other. It is entirely unknown, whether these channels have been dug by the hands of men, or made by the operations of nature.

They are agreeably bordered, on either fide, with many towns and villages, and with pleafant fields, of arable and paftureland; which renders the face of the country very beautiful.

Among these channels, there are some, which are wide and deep enough, to be navigable for large ships. The Haze, or Hare Channel, is one of the most considerable; it runs straight through the country, into the arm of the river that runs by Dacca. It was, as I have already related, examined by the Dutch pilots, in the year 1768. They found sufficient depth and room along its whole extent, for large ships, but for other reasons, it was not judged advisable, that fhips fhould be carried out to fea through this paffage\*.

There are large and dangerous banks, which lie before the mouth of the river, of which I have made mention, in the journal of my voyage  $\ddagger$ . The river itfelf is, every where

\* See pages 105 and 106, of this volume. T.

+ These fands are diffinguished by the English, by the appellation of the western and eastern Braces, Barabulla-fand, Long-fand, and Gasper-fand, or the eastern sea-reef. The braces are two hard flats, lying to the fouthward of the Beercool fhore; they are detached from the land by a tolerable channel, of three fathoms water or more; and they feparate Balafore road, from the entrance of Houghy river. The weltern Brace is about five miles broad at the north end; it lies north by east, and fouth by west, being seven leagues long : but from the middle to the fouth end, it is little more than two miles broad; the depth, at low water, upon the Brace, is at the north end, two fathoms; at the croffing track, which is a fpace athwart the Braces, about two miles broad, in the direction of east by north, three fathoms; and thence to the fouthward it gradually increases to eight fathoms; after which there is no more hard ground. The eastern Brace, is four miles broad, from the north end down to the croffing track; and thence to the fouth end, it tapers away to a point, and bends round in a circle to the s.E. The whole length of the Brace is twelve leagues, and the hard ground at its fouthern extremity is called the western fea-reef; on the north end of the Brace, there is fomething lefs than one fathom, at low water; and the depth increafes gradually to the fouthward; there being two fathoms on the croffing tack, and from three, to

# [ 401 ]

### where, filled with fandbanks, as well in the middle of the channel, as on the fides,

to three and a half, at its fouthern point: Barabulla is a fand. which begins about three leagues fouth by west from the pagoda of Ingellee, and extends s.s.w. about ten miles; the north end is called the bead, and the fouth end the teil, of the Barabulla; the first is very shoal, having only half a fathom, or fo, at low water; it is very dangerous, there being five fathoms in the channel close by it; the tail of this fand has not much lefs water upon it than there is in the channel, only it is broken ground, and overfails of about half a fathom. every cast of the lead. Long-fand begins at Cojorce point, and extends to the fouthward, to latitude 21° 18' north; it is, in all, thirty-five miles long; its width is various, but generally it is narrow, having many patches, which are dry at low water; the directions in which it lies, are fouth by weft, and north by east; the passages called Cockerlees, are swatches through the Long-fand; of these there are three, one just by Cajorce point, another between four and five miles more foutherly, and the third is directly east from the buoy of Ingellee. Gasper-fand is the greatest of all those in the Houghy entrance ; it begins a little to the fouthweftward of Mud-point, in latitude 21° 57' north, and goes, fouth by weft, twenty miles, where it bends round near Sagor ifland, foutheaftward, and extends as far as latitude 21°; the north end of this fand is called the Mizen; it is very broad, and fills up the whole entrance, leaving only a channel on each fide, of which, one is the road of Cajo ce; the middle part is called Gafper, which, to the northward of Sagor, is narrow, and to the fouthward broad ; the fouth end is called the eaftern fea-reef ; but the whole is one continued fand, with various depths of water upon it; and many patches, which are dry at low water; it is detached from the eastern shore and Sagor island, by a very good channel. T.

VOL. I.

which

which renders the navigation very dangerous.

It is at its greateft elevation, and its ftrongeft afflux, in the months of July, August, and September. It then overflows its banks, and inundates the adjacent country. Both flood and ebb, are then so violent, that they threaten to carry every thing before them.

The flood begins, even before the ebb has fubfided, and this does not take place flowly and gradually, but with a great force and noife, fo that its approach may be heard at the diffance of a league.

The water rifes fometimes, at once, to the elevation of fix or eight feet, or higher. Nothing can refift its fury. Ships are torn from their anchors, and carried with impetuofity along with the current, unlefs they take care to change their pofition betimes, fo as to be fheltered from the effects of the *baan* (as it is here called), into places where it does not reach, or where its force is broken. It runs up by *Fultab*, but along the opposite fhore, and not on that fide where the fhips, in general, are moored. Its Its greatest strength is between Serampore and Houghy.

The bed of the river is a foft mud; but the fhoals in it are a hard quickfand.

The river is at the loweft, in the months of March and April. At *Chinfurab*, where our Company have their factory, there is but a narrow creek left, at that time, at low water, running along the opposite shore.

The breadth of the river, at the mouth, by *Ingellee*, is about four German leagues. It narrows by degrees, fo that at and above *Cbinfurab* it is not much more than half a league over.

By the violent afflux, the water is always thick and muddy, and is not very fit for drinking until it has flood ftill for fome time, to fettle. In order to clarify it with expedition, a fort of fmall beans, which grow here, are made use of. One of these beans, is rubbed to pieces upon a flone, with a little water; it is then put into a cask of the river-water, and, in the space of fix hours, it makes it perfectly clear, and fit for keeping a long time at sea.

From Ingellee to Chinfurab, where the river is navigable for large fhips, the depth DD2 of of water is from three and a half to eleven and twelve fathoms.

The waters of the Ganges are effected holy, and the river facred, by all the Indians, who inhabit Bengal, Orixa, Golconda, Coromandel, and the neighbouring countries. The Gentoos worship the Ganges as a divinity, and an annual feftival is held in its honour. They conceive that by washing in its holy waters, they are purified from all their fins : and those who live near the river. perform an ablution in it, at leaft, once every day. Those who have no opportunity of doing this, and who live too far inland, come, once a year, from all parts of the country, as far as thirty days' journey, and farther, to cleanse both their bodies and their fouls in the facred wave.

The number of people, whom I faw arrive in the latter end of March, at Hougly and Terbonee, for the above purpofe, was incredible. The concourfe continued for three days together. All of them, whether men, women, or children, when they had washed themselves, and set off on their return home, carried with them some of the river-water, in vessels, which they had brought for that purpose,

purpole, for the use of fuch of their relatives and friends, as had been left behind, and who, by age or infirmity, were incapacitated for performing the journey \*.

\* A confiderable trade is carried on by the pilgrims who return from the Ganges, and the price of the holy water bears a proportion to the diffance from the river of the place where it is fold. It is chiefly carried in large flafks or bottles, holding nearly five quarts each, fulpended at either end of a bamboo, which refts upon the fhoulders. 7.

#### CHAPTER II.

Inbabitants of BENGAL.—Their Appearance.—Temper and Character. — Women. — Profitution.— Castes.—Artisans.—Dress of the Men.—Of the Women.—Food.—Religion.—Festivals. — Festival of the GANGES.—Ceremonies observed at it.— Its Purport.—Festival of Hooks, so called by Enropeans. — Singular Torments they undergo.— Their Superstition.—Pagodas.—Idols.—Offerings. Brahmins.—Faquirs.—Strange Penances.—Conjurers and Serpent-Charmers.—Curious Feats performed by the latter.— Dancing Girls.—Their Dress.—Dances.—Licentious/ness.

**BENGAL** is peopled by various nations; but the principal are the Moguls, or Moors, as they are improperly called, defcendants of the Zagathais, who, a little more than two centuries ago, brought this kingdom, together with the whole of the empire of *Indoftan*, under their fubjection \*.

• It was in the year 1525, that BABER, one of the defcendants of the renowned TIMURBEG, or TAMERLANE, got poffession of *Debly*, feated himself on the throne of Indostan, and properly established the Mogul empire in India. T.

Next

Next follow the Gentoos \*, or Bengalefe; the first appellation they have in common with the inhabitants of *Coromandel*, *Golconda*, and the greatest part of *Indostan*; they are a hundred times more numerous than the Moors.

The Bengalese do not differ much from the Europeans in stature; they are more inclined to spareness than to corpulency; their colour is dark-brown; their hair is black, and uncurled; they are well made, and I faw none that were misssapen, or lame, except some *faquirs*, who had suffered their bodies to grow crooked, from religious motives. Individuals are met with, who are of a lighter brown cass, and whose complexion approaches to yellow; but these instances are not frequent.

They are, in general, lazy, luftful, and pufillanimous. Their higheft felicity feems to be placed in idleness and fleep; and were they not forced, by the wants of their na-

\* Gentio is a Portuguese word, meaning Gentiles, in the scriptural phrase; by which general appellation they at first called all the natives of India, whether Mahomedans or Hindoos. From them the term Gentoo has been adopted, by which, according to the present usage, the Hindoos, or followers of Brakma, are diffinguished from the Mahomedans, or Mussulmen. T.

ture,

ture, to apply themfelves to fome occupation, they would never work; for nothing lefs than hunger or thirft fuffices to roufe them from their beloved ftate of indolence. They are, neverthelefs, very intelligent, and are not deficient in underftanding, efpecially not in imitative genius. Another trait of their character, is their addiction to ftealing.

I have been told, that their morals were much better, and their behaviour more manly, before the Moguls overran their country, and introduced the Mahomedan religion, and, together with it, innumerable vices, which were before both unpractifed and unknown.

Although most of them are very poor, yet there are some of the banyans, or merchants, who are extremely wealthy, and who yet spare no pains whenever they can earn even half a rupee. These men are very shrewd in matters of trade, and are able to make very large and intricate calculations, which would take us up much time, in a moment, from their heads. They write from left to right, with a split reed, and have a separate alphabet, composed of characters which are diffinct diffinct from those of the Moors and Perfians.

All of them, carry their pufillanimity to a very great excefs; one European is enough to put fifty of them to flight; the leaft menace awakens the fearfulness of their difposition, and is fufficient to make them fly with speed from the threatener. This bent, however, must be chiefly ascribed to the influence of their religion, which instills into them the greatest abhorrence of bloodshed, from their childhood.

The women, although of a brown complexion, have engaging countenances, and are well proportioned. They intrigue with fpirit, and are uncommonly wanton. They use every artifice to entrap the hearts of their male acquaintance, and especially strangers. Prostitution is not thought a difgrace: there are every where licensed places, where a great number of loose women are kept; it is a livelihood that is allowed by law, upon payment to the *faufdar*, or sheriff, of the place, of a certain duty imposed upon the persons of the females who adopt this mode of life; they are generally [ 410 ]

generally affeffed at half a rupee, or fifteen flivers, per month.

The Gentoos are divided into various claffes, called caftes, of which, as 1 have been informed, there are more than feventy. Of thefe, the cafte of the *Brabmins* is the first and noblest, and that of the *Pareas*, who are employed in the removal of ordure and carrion, is the lowest and most despited.

In order that these castes, may each remain pure, and unmingled with the others, it is enacted, that no Bengalese, shall marry a woman, who is of a lower cafte than his own, or if he do fo, he shall then defcend into the cafte of his wife. The fame regulation likewife takes place, if any one, have eaten a meal with another of an inferior cafte. in which cafe, he is immediately degraded to the rank of the perfon with whom he has been thus familiar. It is not only in thefe cafes, but in many others, that a man lofes the privileges of his cafte; for which reafon, they are very careful not to do any thing that may give occasion hereto, and people of the higher orders, will rather fuffer every kind of want, than fubmit to any thing derogatory to their dignity.

Every

Every caste has its peculiar means of livelihood, or manual trade, by which they are maintained, and which is inherited from father to fon. They have accordingly opportunities of making great progress in their respective arts, although they can never expect to rife above the station, in which they are born. The fon of a Brahmin. becomes a priest, or a man of letters, just as his father. A Cooley, or labourer, cultivates the foil, as his anceftors did before him. The fon of a Berra, or palenkeen-bearer, continues to carry palankeens, all the days of his life. Artificers confine themselves to one fort of work, fo that a goldfmith will not work in filver, nor a filverfmith in gold. In the aurungs, or looms, a weaver will only weave one fingle fort of stuff during his whole life, unlefshe be compelled to take another in hand.

The artificers are very ingenious, and I have feen feveral examples, efpecially of gold and filverfmiths, which are fcarcely credible, of the dexterity with which they make every thing that can be formed of those metals; if they have but a proper model, they will imitate it with the greatest exactness and ingenuity. They perform their

their work with fo much expedition and neatnefs, and with fo little apparatus, and fo few implements, than an European artift would be aftonished at their success. They are withal very poor. The workmen in gold or filver, are frequently only little boys, who fit every day on the bazar, or market, waiting till they are called to exercife their trade; when one of them is called, he comes to the house, where he is wanted, with his implements, which he carries in a little basket, and which only confist of a very fmall anvil, a hammer, a pair of pincers, a few files, and a pair of bellows. A chaffingdifh, or pan of embers, is then given to him, with a model of what is to be made: and the gold or filver is weighed off to him by rupees; and an agreement is made how many annas, or fixteenth parts of a rupee, according to the work that is to be done, and the trouble required to finish it, agreeable to the pattern, shall be paid to him; or fometimes an agreement is made how much he shall earn per day, which feldom exceeds fix or feven stivers (pence). He then fets about his work in the open air, and performs it with dispatch and ingenuity. He employs

employs both hands and feet, and is able to hold, and turn things about, between his toes and the fole of his foot, as faft as we can with our hands and fingers. When his work is done, and he is rewarded for it, he takes his little bafket up again, and feats himfelf anew on the market, waiting patiently for another opportunity of exercifing his profeffion.

It is the fame cafe with other tradefmen, who are equally fent for home, when any thing is to be done. If fhoes are wanted, a fhoe-maker is called from the *bazar*, who, with the leather, and other requifites, makes four pair of fhoes in a day, for the value of half a crown.

A taylor here, makes as good and handfome clothes, in the European fashion, both for men and women, as any where in Europe. When a piece of the finest muslin is torn, they can mend it again so artificially, that no eye can discover where the defect was. Muslims are fometimes wove so fine, that a piece of twenty yards in length, and longer, can be inclosed in a common pocket tobaccotobacco-box \*. The whole is done with a very triffing apparatus, and Europeans are often furprifed to behold the perfection of manufacture, which is exemplified here in almost every handicraft, effected with fo few, and fuch imperfect tools.

The common people go almost naked. They wear nothing but a piece of linen, wrapped round the waist, and passed between the legs. Some of them wear a piece of linen, wound about the head; but others go bareheaded. Those of a higher rank, have a dress of white cotton, which doubles over before, as high as the shoulders, and is fastened with strings round the middle; these may not be tied on the right fide, to distinguish them from the Moguls, or Ma-

\* A common fized Dutch tobacco-box, fuch as they wear in the pocket, is about eight inches long, half as broad, and about an inch deep. It is incredible to what a degree of finenefs, cotton is fometimes fpun by the Indians. " I had an " opportunity," fays Dr. THUNBERG, " of feeing cotton-" ftuffs fo exceedingly fine, that half a dozen fhirts could be " fqueezed together in one hand. Thefe are, however, not " readily made ufe of, but are kept, as rarities, by people of " diffinction, to fhew to what a degree of perfection, the art " of fpinning can be brought" **T**.

homedans;

homedans; this drefs hangs down to their feet; they wear no ftockings, but have a kind of fhoes, which are put on flipshol, and are turned up before, just like the Turkish babooches

Most of them shave their heads, and eradicate the hair from all other parts of the body. Rich people wear turbands, but made in a different manner from those of the Moors. A great many of them wear small earrings.

The drefs of the women confifts in a piece of cotton-cloth, which is thrown over the fhoulders, and under which they wear a kind of coat and drawers. They fupport their breafts, and prefs them upwards by a piece of linen, which paffes under the arms, and is made faft on the back. Those that can afford it, adorn their hair with gold bodkins, and their arms, legs, and toes, with gold or filver rings and bands, as likewife their ears, and the cartilage of the nose.

The women of the lower classes, wear fimilar ornaments, which are made of a fort of cowries, brought from the *Maldive* islands, and called *chanclos*, which the Bengalese have the art of fawing through, fo that every cutting cutting makes a ring. They go bareheaded, and their hair is turned up, and fastened at the back of the head.

Rice is the chief article of food of the Hindoos, and ferves them inftead of bread. Vegetables and milk conflitute the remainder of their scanty bill of fare. They eat no fifh, flefh of animals, or any thing that has received life. They frequently let milk ftand till it is thick and four, before they use it; it is then called tayer. Their beverage is generally pure water; they are enemies of every kind of inebriating liquor, and never indulge in the beaftly pleafures of intoxication, as too many other nations do. except fome of the very lowest castes, who fometimes exceed the bounds of temperance. in drinking a kind of fpirits, which they diftil from fpoiled rice.

With regard to their religion, I could not obtain much particular knowledge, farther than what relates to outward ceremonies and rites. Several other writers have, however, enlarged on it. I have often converfed on the fubject, with their *brahmins*, by means of an interpreter, but always found them either very ignorant of, or very obftinate

flinate in not revealing the principles and tenets of their belief. Whatever they faid was fo wildly abfurd, and what they alleged at one time. was fo inconfistent with what they faid at another, that I thought very little of it worthy of prefervation. I could collect, that they believed in a Supreme Being, to whom feveral other deities were fubordinate, of which the Ganges was one of the principal. This supreme God was the author of all good; but there was another fpirit who violently opposed the first, and occationed all the evils and diffreffes which fall upon mankind. They vent the most horrid execrations against this evil spirit, especially when it thunders or lightens, which they believe proceeds from him. They pourtray him in the form of a dragon, or ferpent, with four claws, trampled under foot by the beneficent deity, who is painted in a variety of shapes.

They believe in a future state, in which every one shall be rewarded, according to his good or evil deeds in this world; but this is fo blended and confounded with their belief in the transmigration of souls, that I wol. 1. E E have have not been able to form a clear idea of their tenets in this refpect. They fay that the world will have an end, and that the good Being, after having deftroyed every thing but the *Ganges*, will remain, fitting upon a pifang-leaf, with two betel-plants by him, floating upon the river, and wrapped up in meditation and enjoyment, for everlafting.

Befides others, they have three grand feftivals; namely, the feftival in honour of the *Ganges*; the feftival of *books*, as it is called by the Europeans; and that of the *washings*, or purifications.

The feftival of the Ganges was held, in the month of October, while I was at Chinfurab. The chief purport of it, feemed to be the cafting of a certain image into the Ganges, with much ceremony.

Wealthy banyans, who can afford the expence of fuch a feftival, will certainly not neglect giving one, at leaft once in their lives, although it may coft them ten thoufand rupees, or more. Of feveral of the feftivals of this kind, which were given at *Chinfurab*, there was one, which furpaffed all the

the others, and which coft the banyan who gave it, full eight thousand rupees, or twelve thousand gilders. It lasted three fucceffive days.

I went to the houfe of the banyan, where the feftival was held, that I might have a perfect opportunity of obferving the detail of it.

At the upper end of a large room, there was a kind of ftage erected, about four feet from the ground. Above it, was a fuperb canopy, fupported, on each fide, by two pillars. The whole was covered with red cotton cloth, which was fpangled with flowers, made of thin plates of filver; and which, by the numerous lamps, with which the chamber was illuminated, had a very brilliant effect.

Upon the stage, was a square platform, upon which a semicircular niche was placed, containing several misshapen images of clay, all richly gilt and painted.

The uppermoft and largeft reprefentation, was that of a woman, called *Doulga*, with two larger, and two fmaller, arms; in one hand fhe held the head of a man; in another, a goblet; in the third, an oblong piece of wood; and in the fourth, fome-E E 2 thing thing that refembled a book. On each fide of her, were two fmaller images, which the brahmins told me were the reprefentations of her children. Lower down, was the image of a monfter, having the body of a horfe, and the head of a dragon; and near it was a hideous human figure, which it threatened to devour.

The member which diffinguished the images of males, was naked; and in fuch a posture, and of such a fize, as to be extremely offensive to every one, but to these blind heathens.

The outer border of the niche, was divided into fmall fquare copartments. Different achievements of their gods were delineated in each; but all were painted in a deformed ftyle. The whole of the niche, and every thing near it, was adorned with gold and filver, and its appearance was, in fact, fplendid and dazzling.

Here and there, were representations of a divinity, to whom they pay adoration, under the appellation of *lingam* \*. This is the

• The *lingam* is the image of the male organ of generation, and, in the mythology of the Hindoos, is the universal symbol of renovative nature. **T**.

moft

most scandalous worship of all the numerous abominations, which the superstition of man has multiplied upon the face of the earth. They prostrated themselves, from time to time; before this idol, and made offerings to it of flowers, perfume, pieces of gold and filver, and even gold and filver coin, which was diligently collected, at the termination of the festival, by the brahmins, who had the care of this deity.

The roof of the apartment, was hung full of cocoanuts, arecanuts, and other fruits, strung in rows. The concourse of people was very great, and every part was crowded, except in the middle of the room, where a fpace was left for the dancing girls, who danced for three nights, from the evening until daybreak, before Doulga. While dancing they threw themfelves into the most indecent attitudes, and with gestures the most libidinous, they kept their eyes constantly fixed on the niche. They danced to the found of cymbals, triangles, tomtoms, or little drums, and other mufical inftruments; and amidit the chanting of hymns, in honour of the gods, whole festival they celebrated. The E E 3

[ 422 ]

The whole gave a confused noise, but by no means difagreeable.

In the last night, a folemn facrifice was made of a young buffalo, in the following manner:

A large oblong pit was dug, in the middle of the hall, oppofite to the ftage; at the upper end, two low stakes were driven into the ground, not far from each other. The buffalo, which was plentifully adorned with flowers, was then put into the pit, and his neck laid between the two flakes, his head being fo placed, that his eyes were turned towards the niche. If he continue to look fteadfastly at the niche, without turning his head or eyes away from it, it is confidered as a peculiarly favourable omen, and a fign that the facrifice is agreeable to the goddefs; but if the contrary take place, and he turn his head, to either one fide or the other, it is conftrued into an evil prefage. A crofs piece of wood is made fast, over the neck, to the stakes, fo that the animal cannot lift up its head. Upon this, they pull the buffalo by the tail, as hard as they can, in order to ftretch the neck, which is cut through, at

at one ftroke, by a brahmin. The head is laid before the goddefs, and the people manifeft great joy; but if the brahmin be forced to make more ftrokes than one, it is looked upon as a fatal omen, and occasions much forrow and confternation.

During the whole of the three nights, the apartment was filled with people; it was open to every one; and the guefts were plentifully fprinkled with rofewater, from time to time; those of most consideration were anointed, upon their head and hands, with oil of roses.

The 10th of October, which was the fifth day after the full moon, and the fourth after the commencement of the feftival, was the time appointed by the brahmins, to commit the offerings to the Ganges; and this folemnity was observed, not only at Chinfurab, but along the whole course of the river, at one and the fame time, with various degrees of pomp and magnificence, according to the wealth and power of the celebrators.

In the afternoon, all the niches were taken out of the houfes, where they had been exposed to view. At the door, they were placed upon handbarrows, the faces

E E 4

of

of the images, being turned backwards, and were carried by four men, upon their Two men went on each fide. thoulders. with fans, made of peacock's feathers, to drive away the flies and other infects from the images. Two went before, with clarions, and others followed with drums, and cymbals, making a confused kind of music. The procession was accompanied by a great concourse of people. When they came to the banks of the Ganges, the niches were put on board of veffels, in which the attendants with fans, and the muficians likewife embarked, continuing their rude harmony; whilst others again danced before the goddefs, making gestures of the most unequivocal and fhameful kind that can be conceived.

In this manner, they failed up and down the river, which was covered by an innumerable quantity of veffels of all fizes, all gaudily decorated with flags. The people were in high fpirits, and all emuloufly frove to evince their joy, by their geftures and expreffions.

At funfet, all the niches were thrown out

of

of the boats into the river, which terminated the ceremonies of the feftival.

As far as I could collect, from what the banyan faid, I underftood that this feftival was the reprefentation of a marriage; for the Ganges is fuppofed annually to efpoufe the goddefs Doulga, and the children who ftood on each fide, are intended to reprefent the progeny of this exalted union. The highly voluptuous attitudes and poftures which were made before the goddefs, were intended to excite the defires of the celeftial couple, and ftimulate them to the procreation of more children, in order to conquer the evil fpirit.

The feftival of *books* \* (which is the name given to it by Europeans) is celebrated in the beginning of April. I was not an eyewitnefs of it, becaufe I had, at that time, left the *Ganges*; but the following account was given to me, by people worthy of credit.

At the top of a high stake, erected for this

• Called by the Hindoos, the feftival of Oppos. It is fuppoled to be kept in commemoration of a martyr, who fuffered extraordinary tortures for the fake of his faith. T.

purpose,

purpole, a crofs piece of wood of thirty feet in length, is laid, which turns round upon an iron pin. A Bengalese, who is confecrated to this folemnity, by one of the chief brahmins, then has a great iron hook run into his body, under the ribs, over which a piece of cloth, or girdle, is stiffly bound, to prevent the tearing through of the flesh. The book is fastened by a short cord, to one end of the crofs beam, and a longer cord is fixed to the other, by which it is turned round with rapidity, feveral times, by the people who are prefent, whilst the man who undergoes the penance, and who hangs by the hook at the other end of the cross beam. in the air, ftrews ground rice, or flowers, upon the people below, which they catch and preferve, as facred relics. After having been whirled round for fome time, he is taken down, the hook taken out of his body, and the wound is cured as foon as possible.

Others, out of a fuperfitious zeal, run iron pegs through their tongues, fome that are as thick as a finger, which they keep in that fituation, and carry about with them wherever they go, as long as the feftival lafts.

Some

Some make two openings, one in each fide, through which they pais ropes, which are ftretched tight at either end, and along which they run backwards and forwards.

Several fuffer themfelves to be crushed to death, under the broad wheels of a lofty machine, which is made for the purpose; and being filled with people, is drawn about by a multitude of others. This, however, is more practifed among the Gentoos on the coast of *Coromandel*, than in *Bengal*.

They inflict a variety of other corporal penances upon themfelves, during this feftival, but the above are the principal.

The feftivals are not celebrated every year on the fame day, for they are fometimes anticipated, and fometimes delayed, for feveral days, according to the regulations of lucky and unlucky days made by the brahmins. In this refpect they are exceffively fuperfitious, and they will never undertake any thing upon a day, which they efteem unlucky.

It is the fame with regard to numbers. An odd number is reckoned lucky, and an even one, the contrary. Upon receiving or paying fums of money, they will rather lofe lofe a rupee, than either take or give an even number.

Their temples, called pagodas, are mofily fquare; they are stone buildings, which are not very lofty, and are crowned with a cupola. Within, they are very dark; for they have no windows, and only receive their light through the entrance. The image of the idol. ftands in the deepeft and darkent receis of the temple; it is of a monstrous shape, and of uncouth dimensions, having many arms and hands, in each of which it holds fomething. Amongst many others, I faw one, which had an human figure, and was reprefented in a fitting pofture. The head was very large in proportion to the body, with the tongue hanging out of the mouth, half way down the breaft; the eyes were stretched wide open; it had four arms and hands; one hand was empty, but the palm of it was turned upwards; in another it held a little board; in a third, a naked fword; and in the fourth it grafped a human head by the hair.

I faw fome idols, which had eight, and others, with fixteen arms; these had an human

man body, but the head of a dog, with drawn bows, and other inftruments of war, in their hands.

Some of them were black, others of a yellowifh hue; one was the folitary divinity of a temple, and others had images reprefenting their wives near them.

In fome pagodas, were no images, but only a fingle black, polifhed, ftone, lying upon a round altar, covered with flowers and fandalwood, which were ftrewed upon it. They fhew mo e veneration for these ftones, than for the idols themselves.

Their worship of these divinities, confists in throwing themselves upon the ground, and making their *falam*, or falutation with their hands, ejaculating their prayers in filence, in that posture.

The offerings which they are accustomed to prefent to their gods, confist of flowers, rice, pieces of filk and cotton, and sometimes gold and filver. Every thing is laid before the idols, and is taken care of by the brahmins, who profit the most by it. They guard the pagodas, both by day, and by night.

The brahmins, or priefts, called brahmans, by

by the Indians, who are the *brachmanni* of antiquity, are of the first and noblest caste of the people, as we have before observed. They are known by a thin cord, with a bead, which is passed round the neck, and hangs down upon the breast; they are never without this mark of distinction.

They are held in the greatest respect by all the other castes; and no one approaches a brahmin, but with marks of the highest veneration, to which they make no other return, than shewing the open palms of their hands.

There are feveral caftes of brahmins, which differ in rank and reputation; fome of them are reputed fo holy, and are held in fuch high veneration by the people, that the water in which a brahmin, belonging to them, has washed his feet, is esteemed facred, and is given to the common Bengalese to drink, who think it the greatest felicity to be allowed a share of such a disgusting beverage.

The vedam, or facred book, in which the principles and duties of their religion are infcribed, is kept, it is faid, by the chief brahmins of the first order. The copies of it,

it, are afferted to be written in Persian letters, upon a certain fort of paper, impervious to the attacks of worms, or other infects.

The brahmins never neglect washing themselves in the Ganges, at funrise. Before they enter the water, they make a few *falams*, or falutations, to the river : upon this they take fome water in the hollow of the hand, and offer it to the rifing fun, bowing their heads many times; they then befprinkle all the parts of their body with it, one by one, ending by the forehead and breaft. I faw feveral, who had a little brass pot, or thell, with which they continually fcooped up water, out of the river, and let it run out again immediately, muttering prayers all the while; but when they filled it for the laft time, they went out of the river, and poured the contents upon the bank; after this, they made a mark, with a yellowifh kind of clay, upon the nofe and eyes, in the form of the letter y; I faw other Bengalese likewise mark themselves in this manner, making, however, only a fingle stripe upon the note, and upon the forehead. They then go into their pagodas, to pray, decorating their idols with with flowers, and strewing them with fandalwood.

I was affured, that brahmins are to be met with, in the neighbourhood of *Dacca*, who, far from refembling fome of these castes in stupidity and ignorance, on the contrary, entertain pure ideas of the godhead, and penetrating through the veil of these external, puerile, and ridiculous ceremonies, to the conception of an almighty Creator, join the practice of the moral virtues, to their belief in his omniscient providence. But they will feldom enter into conversation with strangers on these fubjects.

The land abounds with a fort of religious beggars, who are called *faquirs*; thefe are, in general, the very refuse of fociety, the worst of whatever deferves to be called bad.

They do not work, but live by the alms, which are beftowed upon them, willingly and in plenty, by the fuperfitition of the people. They go entirely naked, and are wholly devoid of fhame. On their fhoulders, they carry a thick club, the end of which is wound round, with rags of cloth, of all cotours. It is dangerous to meet them in folitary places, or in the woods, for they make

# [ 433 ]

no fcruple of knocking down, and murdering, whoever happens to have any thing of value about him. They wander about the country, in troops of two or three hundred, and all ftand under one chief, who confecrates them to this vocation, which they may not adopt without his confent.

They ftrew their hair, which hangs half way down the back, with afhes, and fometimes wallow in afhes, rolling the whole body in them, and making a most difgusting figure of themselves.

They are not allowed to marry, but they indemnify themfelves for this privation, in other ways, and by the perpetration of the most abominable beastlines.

They generally take up their abode in fhady places, either in the open air, or in old and ruinous buildings, without using any thing to repofe upon, or to cover themfelves.

Genuine faguirs make vows, that they will perform penance, by remaining, during their whole lives, in fome unnatural or uneafy pofture, or by torturing their bodies by various methods; but most of them are not excited by real penitence or compunction, but are fpurred on by vainglory, endeavouring

VOL. I.

ing to attract the notice and respect of the commonality, and thereby to raife themselves to effect and honour.

I met with several of them. at different times. Among others, were fome, who, by keeping one arm fretched out upwards for many years, had loft the power of lowering it again, and were forced always to remain in that position. Others, who had made choice of a bend in their body forwards. and who were, in confequence, grown fo crooked, that they formed a right angle. Some, who by continually bending the head backwards, could not bring it back to its natural position. There were others again, who dragged heavy iron chains about with them, during their whole lives. Inland, as I have related in my journal, I faw one, who had a brafs ring, of the thickness of a quill, thrust through the penis, with three other rings of iron, rivetted to it like links of a chain, without it feeming to imcommode him at all, in walking.

Conjurers, and ferpent-charmers, are to be met with, in abundance. The latter, chiefly refide in the villages, and exercise their art for a trifle of money. When a fnake fnake is fuppoled to have taken up his abode, in a house, or any other place, one of these exorcists is sent for, who performs his office in the following manner:

He first creeps, upon his hands and knees, all over the ground, fmelling in every hole and corner, and foon difcovers the reptile, if there be one, by the fcent. Having thus afcertained whereabouts the animal is, he fits down, and taking out a little flute, made of bone, plays upon it for fome time, till the fnake comes out of his hidingplace, and darts at him, with a violent hifs; he then drops the flute; catches the creature in both hands, and kills it, at one blow, by ftriking its head against the ground, without being bitten by it.

They know how to deprive inakes of their poifon; using for that purpose a little ball of *capek*, or cotton, with which they take it from between the teeth, where it lies, inclosed in bladders; and they keep the fnakes, thus deprived of their venemous quality, in wicker baskets, carrying them about the country, and making them dance.

When I was at Fultab, I fent for one of them, in order to fee this curious exhibition.

FF2

Digitized by Google

He brought three baskets with him, in which there were feveral fnakes. He took out two of them, both Cobras di Capelli, which are effeemed the most venemous of all, and threw them upon the ground, in the grass. They immediately began hiffing, and erecting half of their bodies upright, darted upon, and twined round each other, as often as he encouraged them. They fometimes darted at the bystanders, but then he caught them fuddenly by the tail, and drew them back. He fometimes excited them against himself, and suffered them to bite his breaft, hands, and forehead, till the blood ftreamed from the wounds. After having made them play their tricks for fome time, he took out of a basket, a very large fnake, which was at least twelve or thirteen feet in length, and beautifully variegated with tints of green and yellow; he made it bite him fo hard in the breast, that it remained hanging by its teeth, without feeming to do him any harm; he then took a fmaller one, put its head into his mouth, and made it feize his tongue, to which it likewife cleaved by the teeth; and throwing them round his neck and arms, was encircled

iņ.

in their folds, without fuffering any other inconvenience, than the blood flowing from the wounds, along his face and breaft.

Although these men, do not die by the effects of the venom, because, as aforesaid, they have the secret of depriving the stakes of their poison every day, yet their skin has a leprous and scaly appearance, and they are covered with puscules.

Both Moors and Bengalese take great delight in having women dance before them, who are kept for that purpose, and are educated, from their infancy, in the exercise of this diversion. Their feasts and entertainments would be destitute of attraction, if a troop of fix or eight dancing-girls were not present at them.

Whenever they are fent for, they are always accompanied by fome of their muficians, who, with their cymbals, *tomtoms*, and an inftrument which refembles a violin, and upon which they play with a little flick, do not make a difagreeable concert, at leaft in the Bengal tafte; and they accompany their performance with their voices, which, however, is not the most pleafant part of the entertainment.

FF3

The

The dancing girls are richly decorated, according to their fashion, with rings of gold, or of filver gilt, upon their arms, legs, fingers, toes, and necks ; they have golden circlets, of the shape of French horns, passed through the left nostril. Their drefs confifts in wide Moorish drawers, which reach to their heels, and are fastened round the waist; over this, they have a kabay, which is made with a fmall body above, and a flowing petticoat below; it is made tight under the bolom, which it fupports, and presses upwards, but which it covers entirely : the fleeves come down to the hands. and are faltened with a row of little buttons underneath. Their hair, which is quite black, and shines with oil, is stroked smooth over the head to the back part, where it is tied in a knot. They have a veil of white muflin. which is thrown over the whole, and with which they conceal their faces from time to time, during the dance.

Their dances confift in continual twinings and bendings of the body and head; and in advancing and receding, as is practifed in the Spanish dances.

If any one be captivated by the charms of their

their perfons, or of their dancing, they make no fcruple of gratifying him with the enjoyment of those which are less public, for a trifling confideration; and without occafioning the least fcandal to the company, or to their companions, who continue dancing, without noticing the retreat of their frail affociate.

### CHAPTER. III.

Marriages of the Bengalese. — Burning alive of Widows. — Ample Account of the Geremonies obferved on fuch an Occasion. — Another Instance. — Burying alive Widows. — Disa'es incident to the Natives. — Dysentery. — Swelled Legs. — The Jounibaad. — Small-pox. — Inoculation. — Prastitioners of Ph fic. — Their Remedies. — Mode of Saluation. — Manner of Drinking. — Poushola Conveniences. — The Moguls. — Their Complexion. — Charaster. — Religion. — Morals. — Infamous Debauchery. — Dress.

THE Bengalese marry no more than one wife, except the brahmins, who take as many as they choose, or can maintain; yet if the wise of one of another caste be barren, and he have money enough to support her, he is allowed by the brahmins, upon payment of a certain sum, and the distribution of some alms, to take a second wise, in addition to the first.

The ceremonies which take place at their marriages are of little importance.

Girls, as in all warm climates, are marriageble

riageable at an early age, and they ceafe likewife to bear children very foon.

The women live in the ftricteft fubjection to their hufbands, and in fome caftes, the wives are obliged, when their hufbands die, to follow them to the other world, and are either burnt, or buried alive together with the body: if they were to refuse fubmitting to this barbarous cuftom, their characters would be ftamped with the greateft infamy, and they would live the fcorn and derifion of their companions and relatives.

I was an eyewitnefs of the burning of a Bengalese woman, and of the ceremonies which accompanied it; and the following is the account of it, which I drew up at the time:

On the 25th of November, having received intimation that this folemnity would take place about noon, I went betimes, with fome of my friends, to the place which had been pointed out to us; it was a few paces out of *Chinfurab*, upon the banks of the *Ganges*.

We here found the body of the deceased, lying upon a *kadel*, or couch, covered with a piece piece of white cotton, and ftrewed with firi, or betel-leaves.

The woman, who was to be the victim. fat upon the couch, at the foot-end, with ther legs croffed under her, and her face turned towards that of the deceased, which was uncovered. The hufband feemed to me, to have been a perfon of about fifty years of age, and his widow was full thirty. She had a yellow cotton cloth wrapped around her. and her arms and hands were adorned with rings of chances. Her hair, which hung loofe all round her head, was plentifully ftrewed with ground fandalwood. She held a little green branch in her right hand, with which she drove away the flies from the body.

Round her, upon the ground, fat ten or twelve women, who kept fupplying her with fresh betel, a portion of which she had continually in her mouth; and when she had half masticated it, she gave it to one of her semale friends, or to others of the bystanders, who begged it of her, wrapped it up in pieces of cloth, and preferved it as a relic.

She fat, for the greatest part of the time, like one buried in the deepest meditation; yet

yet with a countenance that betrayed not the leaft figns of fear. The other women, her relations and friends, fpoke to her continually of the happines which the was about to enjoy, with her husband, in a future life. One of these women, who fat behind her upon the couch, frequently embraced her, and seemed to talk the most, and very earnestly, with her.

Befides the women, feveral men, as well her relations, as brahmins, were prefent, who at intervals, ftruck their cymbals, and beat their drums, accompanied by the fongs, or cries of the women, making a most deafening noife. About half pass ten o'clock, they began to prepare the funeral pile, at the distance of a little more than eight feet from the spot, where the unfortunate widow was sitting, but which the beheld with the most stoic indifference, as if it in no ways concerned her.

The pile was made, by driving four green bamboo ftakes into the earth, leaving about five feet above the ground, and being about fix feet from each other, forming a fquare, in which was first laid a layer of large firewood, which was very dry, and eafily combustible; buftible; upon this was put a quantity of dry ftraw, or reeds, which hung over beyond the wood, and was plentifully befmeared with gbee, which is a fort of butter, when it becomes old and rank. This was done alternately, till the pile was about five feet in height; and the whole was then ftrewed with fine powdered rofin. Finally, a white cotton fheet, which was first washed in the Ganges, was fpread over the pile, thus completely prepared for confuming of the devoted victim.

The widow was then admonifhed by a brahmin, that it was time to begin the rites. She was then taken up by two women, from the couch, carried a little farther, and put down upon the ground, while the others made a circle round her, and continued to offer her fresh betel, accompanied by entreaties, that, as she would, in so short a time, appear, with her husband in the prefence of *Ram*, or their highest God, she would supplicate for various favours for them; and above all, that she would salute their deceased friends, whom she might meet in the celestial abodes, in their names.

In the mean time, the body was taken up

up from the couch by four men, and carried to the river, where it was washed clean, and rubbed with turmeric, but which was afterwards washed off again. Upon this, one of the brahmins took a little clay out of the river, and marked the forehead of the deceased with it, wrapping the body up in white linen; which, when this had been done, was carried to the pile, and laid upon it.

The woman, who had beheld all thefe preparations, was then led by two of her female relations to the Ganges, in order to wash in the river. When the came again upon the bank, her clothes were pulled off, and a piece of red filk and cotton gingham was wrapped round her body. One of her male relatives, took out her gold nofe-jewel, while fhe fat down, and gave it to her, but fhe returned it to him for a memorial of her. Hereupon fhe went again to the river, and taking up fome water in her hands, muttered fome prayers, and offered it to the fun. All her ornaments were then taken from her, and her armlets were broken, and chaplets of white flowers were put upon her neck and hands. Her hair was tucked up with with five combs, and her forehead was marked with clay in the fame manner as that of her hufband. Her head was covered with a piece of filk, and a cloth was tied round her body, in which the brahmins put fome parched rice.

She then took her laft farewel of her friends, both men and women, who had affifted her in the preparation, and fhe was conducted by two of her female relations to the pile. When the came to it, the fcattered from that fide, where the head of the deceased lay, flowers and parched rice upon the spectators. She then took some boiled rice, rolled up in a ball, and put it into the mouth of the deceased, laying feveral other fimilar balls of rice under the pile. Two brahmins next led her three times round it, while the threw parched rice among the bystanders, who gathered it up with great eagernes. The last time that the went round, the fet a little earthen burning lamp, at each of the four corners. The whole of this was done during an inceffant noise of cymbals and drums, and amidst the shouts of the brahmins, and of her relations. After having thus walked three

three times round the pile, the mounted courageoufly upon it, laid herfelf down upon the right fide, next to the body, which fhe embraced with both her arms; a piece of white cotton was foread over them both. they were bound together over the arms. and middle, with two eafy bandages, and a quantity of firewood, ftraw, ghee, and rofin. was laid upon them. In the last place, her nearest relation, to whom she had given her nofe-jewel, came with a burning torch, and fet the straw on fire, and in a moment the whole was in a flame. The noise of the drums was redoubled, and the fhouts of the fpectators were more loud and inceffant than ever, fo that the shrieks of the unfortunate woman, had fhe uttered any, could not poffibly have been heard.

What most furprized me, at this horrid and barbarous rite, was the tranquillity of the woman, and the joy expressed by her relations, and the spectators. The wretched victim, who beheld these preparations making for her cruel death, seemed to be much less affected by it, than we Europeans, who were present. She underwent every thing with with the greatest intrepidity, and her countenance seemed, at times, to be animated with pleasure, even at the moment when such as associated the second s

Her feet appeared from between the firewood, on the fide where I ftood; and I had an opportunity of obferving them, becaufe a little breeze, playing upon that fide, cleared it of the flame and fmoke; I paid peculiar attention to her, in order to difcover whether any convultive motions agitated her feet, but they remained immovable, in the midft of the conflagration.

The women who were prefent, and who all, fooner or later, would have to undergo the fame fate, if they furvived their hufbands, appeared to rejoice at the facrifice, and fhewed every token of exultation.

If an European were to touch fuch a devoted woman, even accidentally, fhe would not be allowed to be burnt, and would be thought entirely defiled and profaned. The man who had touched her, would be exposed to great danger, if he did not purchase indemnity, by large fums of money. This happened to our director SICHTERMAN, who was was obliged to pay twenty-five thousand rupees, for an imprudence of this kind, which he had been guilty of.

If the women were to refufe accompanying their hufbands, in this manner, to the other world, they would be defpifed and abandoned by their friends, as the refufe of fociety, the dregs of impurity. In fuch cafes, they are never allowed to marry again; their hair is fhaved off, and an eternal difgrace attaches both to themfelves and to their family. Hence their relations employ all poffible perfuafions, and affiduoufly encourage thefe wretched creatures to fubmit to the univerfal cuftom; yet I was told that this is feldom neceffary, as they poffefs fufficient enthufiafm, willingly to devote themfelves, to this horrible death.

A little before I arrived in the Ganges, a rich Bengalefe, who was the broker of our Company, had died, and left a young and handfome widow, under feventeen years of age; with whom he had but once cohabited, in the beginning of his marriage, and inftead of living with her, had kept a concubine, with who he refided.

As foch as he was dead, her friends came vol. r. GG to to her, and, well knowing the infamous life he had led with refpect to her, endeavoured to perfuade her, in the most forcible manner, not to be burnt with her husband, fince he had used her fo ill in his lifetime, that she ought not to account herself his wife, and that she would therefore not be required to comply with the general usage.

She, however, answered undauntedly, that she was once united to him, and esteemed herself united to him for ever, that she had loved him, and would now accompany him even in death. On the same day, she suffered herself, with a cheerful countenance, after having embraced and kissed the dead body, to be burnt with it to ashes.

They believe, that if they facrifice themfelves in this way, they will enjoy with their hufbands, every fpecies of fenfual gratification, in another life; and fired by this expectation, they expire with pleafure, amidft the torments of flame.

The pile which was erected for the young widow I have just mentioned, was made of fandalwood, and was calculated to be worth feven thousand gilders \*.

\* About 6331. sterling. T.

The

## [ 451 ]

The burying alive is done in the following manner. A pit is dug in the earth, of fix feet square, in which the body of the deceased, after having been washed in the Ganger, in the fame manner as when the widow is burnt, is laid upon the back. The woman, after having been alfo washed and prepared in the fame way, as in the former instance, jumps into the pit, lays herself down next to the body, and takes it in her arms; upon which the hole is inftantly filled with earth, and trampled hard down, fo that fhe is imothered in a moment. The whole of this rite, is equally performed, amidit the founding of their mufical instruments, and the flouts of the affiftants.

The difeafe which is the most prevalent here, is the dysentery, which is occasioned by the flatulency and insipidness of their articles of food.

They are likewife much afflicted with fwelled legs; and I faw fome who had them bloated to the thickness of a man's waist. A gattgrene is the usual confequence, and this difease generally terminates in the death of the patient. They have no surgeons who are capable of opposing the progress of the GG 2 evil.

evil, or of amputating a limb; and many unhappy wretches die in pain and mifery, for want of fkilful practitioners.

A fort of fickness, or fever, likewise prevails in *Bengal*, which is called the *jounibaad*, and which generally sweeps away those who are attacked by it, in the space of three days. Those who recover, often retain a deafness, a blindness, or a confumption; and sometimes a general paralysis, the dreadful consequences of this fcourge.

This difeafe is better cured by the native practitioners, than by European phyficians; for its fymptoms are not dubious, and it is a diforder peculiar to the country.

The fmall-pox is equally a diffemper that prevails here; it began to rage violently before I left the *Ganges*.

Inoculation is much practifed by the natives, but they convert the contagious matter into powder, which they give internally, mixed with fome liquid. A few of them, however, inoculate by incifion. The first mode has generally a very fortunate issue; they prepare the body for the infection, by laxatives, and ablutions. A fever is felt the day after inoculation, which is foon followed

by

by the eruption; and in three weeks the cure is completed.

The practitioners of medicine, among the Bengalefe, are all of the brahmin cafte. They are held in great effeem, on account of the art they profefs; but their knowledge of it, feemed to me, to be very imperfect. They inherit from their anceftors, who have equally been phyficians, a number of recipes of remedies for all forts of difeafes, which they have found, by long experience, to be of benefit; and when they hit upon the true nature of the diforder, they feldom fail in the cure. But upon any uncommon appearances, they are confounded, and know not what to do; of which I have known feveral inftances.

They have not the leaft knowledge of anatomy, becaufe their religion does not permit them to fhed blood, or to open a body.

When they feel the pulfe, they do it with a kind of drumming motion with the fingers.

They fay that all diftempers arife from one of these three causes, namely, heat, cold, or bile.

GG3

Their

Their medicines are mostly fuch as are produced in the country. Amongst others, they make use of a kind of little artificial stone, that is manufactured at *Gog*, and posfession a strong aromatic scent. They give the scrapings of this, in a little water, mixed with sugar, to their patients. They employ sugar with almost all their medicines; insomuch that when a physician is sent for, he always brings sugar with him.

The falutation of the Bengalefe, confifts in touching the forehead with the right hand, and bending the head forwards. When they want to make a very humble *falam*, or obeifance, they first lay the right hand upon the breast, then touch the ground with it, and afterwards the forehead.

They are not deficient in expressions of humility, when they address any one, from whom they stand in need of any favour. The least that they fay, is, "I am your most " devoted slave;" but, in the fame way as takes place in our more civilized Europe, they are mere founds, words of course, fignifying nothing.

They will, on no account, drink out of the fame veffel with an European, or Mahomedan; homedan; nay, not with any one of a different cafte. When they drink, they do not fet the veffel to the mouth, but hold it at a little diftance above it, and let the liquor run into the mouth, without closing the lips, or drawing breath; and yet with-

Their houshold conveniences are very few; they never make use of either chairs, or benches.

The Moors, or Moguls, form the remainder of the inhabitants of *Bengal*. They were originally natives of *Tartary*. They are, in general, browner than the Gentoos, although fome of them are tolerably fair, or rather yellowifh; but thefe are born farther to the north. Most of those who live about *Agra*, and *Debly*, are, as I was informed by the beforementioned French missionary, fair, in comparison with the inhabitants of the more fouthern provinces.

They are more courageous than the Bengalefe. Their *fipabis* make middling good See y foldiers, when they are trained and commanded by European officers; at leaft, according to the testimony of the English, who employ them much.

GG4

Their

### [ 456 ]

Their religion is that of Mahomet. They, in confequence, hold in abhorrence the idolatry of the Gentoos. Yet their morals are. on the other hand, much worfe; and indeed infamoufly bad. The fin of Sodom is not only in universal practice among them, but extends to a bestial communication with brutes, and in particular with fheep. Women even abandon themfelves to the commission of unnatural crimes. One of my friends. who had refided for a long time at Patna, informed me, that, during his abode at that place, a Moorish woman had endeavoured, like another Pasiphaë, to satisfy her lust, in the embraces of a stallion : but the dreadful confequence of her boundlefs lubricity were. that fhe was fo feverely hurt in her attempts to procure the enjoyment fhe fought, that fhe died in the greatest agonies, a few hours afterwards. I do not believe that there is any country upon the face of the globe, where lascivious intemperance, and every kind of unbridled lewdnefs, is fo much indulged in, as in the lower provinces of the empire of The contamination of vice is not Indostan. folely confined to the two nations, who are natives of the country, but extends likewife to

to the Europeans, who fettle, or trade here. The climate influences perhaps more upon the conftitution here, than in other countries.

The drefs of both rich and poor, among the Moguls, is nearly alike, and differs only It confifts of a long coat. in coffliness. which is called kabay, as has been before dofcribed. They tie a girdle round the middle, and in it, on the left fide, they wear a weapon, which they call by a name that may be translated *belly-piercer*; it is about fourteen inches long; broad near the hilt, and tapering away to a fharp point; it is made of fine steel; the handle has, on each fide of it, a catch, which, when the weapon is griped by the hand, fhuts round the wrift, and fecures it from being dropped. They feldom or never go out, without having it in their girdle, in the fame manner, as the Javanese wear their kriffes.

#### CHAPTER IV.

Government in BENGAL.—Coins.—Weights.—Meejures.—Divisions of Time.—Chronometers.—Country-boats. — Land-carriage. — Animals. — Elephants. — Tigers.—Wild Buffaloes.— Jackals.— Snakes.—Infects.—Birds of Prey.—Fifb. — Gracodiles.—Languages.—Articles of Commerce.—Silk. —Management of the Silkworms.—Cotton Manufactures.—Opium.—Mode of its Cultivation and Collection.—Annual Quantity collected.—Saltpetre. —Gumlack.—Articles of Importation.

**BENGAL** is under the administration of a governor, flyled Nabob, or properly Namab, who was formerly appointed by the emperor of Indoftan, or the Great Mogul (but now this is done by the English), as his lieutenant. These viceroys were generally taken, in an hereditary fucceffion, or in default of a male heir, from the nearest relatives; and though they were only the delegates of the emperor, as lord paramount, they ruled, in fact, as fovereign princes. They were, however, obliged to furnish men and arms to the emperor, when at war, and

and to pay a certain proportion of the annual revenues which they drew from this wealthy country, to the Imperial treafury \*, the reft being deft to themfelves. The English, at prefent, collect the revenues, and make the diffribution, giving, both to the emperor, and to the nabob, no more than they choose to fpare, and leaving to the latter only the outward femblance of authority.

Every diffrict has its own governor, under the denomination of *faufdar*, who must render account of his administration to the nabob.

These again appoint in every town or village a zemindar, who rules over the place, and part of the circumjacent country, and settles all differences which arise between the inhabitants.

\* We have no particular account of the amounts paid into the Imperial treasury, from the province of Bengal, except one, of the year 1707, when the empire was in its most flourishing state, under the famous AURENGZEBE. The revenue from the subah of Bengal was then 524,636,240 dams, making at forty dams, and 25. 6d per rupee, 1,639,4881. 55. sterling. The whole of the revenues from all the provinces, then amounted to 12,071,876,840 dams, or 37,724,6151. 25. 6d. sterling. T.

The

The only current coins in *Bengal*, and in the whole extent of *Indoftan*, are gold and filver rupees. All foreign gold and filver, whether coined, or in bullion, is carried to the mint, and transformed into rupees, which are ftamped with Perfian letters inftead of any portrait, or arms.

They decrease every year in value, and at the end of nine years, the *ficca* rupees are taken at the fame rate as *Arcot* rupees.

When the rupees first come from the mint, they are called *ficca* rupees of the first year. Those which are coined at *Moorfhedabad* are the current coin in which the trade of the Company is carried on, and by which all the other rupees in circulation here, are reduced. It is divided into fixteen *annas*; its intrinsic value in Dutch money, is one gilder, four stivers and a half, and it is taken in the Company's books at twenty-five stivers; but in Indian currency, at thirty-one stivers and a half, for which it is current at *Hougly* \*. It is the money of account, according

\* In Sir ISAAC NEWTON'S table of the allays, weights, and values of foreign filver and gold coins, made at the Mint, by cording to which the value of the other rupees are calculated, at a difcount, or agio, which is called *batta*, of from fix to twelve per cent, which undergoes continual fluctuations, by the management of the moneychangers. The *Arcot* rupees, which are coined by the Englifh at *Arcot*, and by the French at *Pondicherry*, go for thirty flivers \*, yet the laft are reckoned from one to three per cent better than the former.

The gold rupee, which is called *mobur*, is worth fifteen filver *ficca* rupees.

Halves, fourths, eighths, and fixteenths of rupees, are likewise coined; the last, as above faid, are called *annas*.

Copper coin is not feen in *Bengal*. For change they make use of the small feashells, called cowries, eighty of which make a

by order of the privy-council, before the year 1717, the affay of the rupee is flated at  $16\frac{1}{3}$  dwts. better than flandard; its weight, at 7 dwts. 13. gr.; its flandard weight, at 8 dwts. 2 gr. 453 pts.; and its intrinsic value at 24 d. or. The English generally compute it to be currently worth 2s. 6d. fterling. T.

\* According to RICAUD, the Arcot are fix per cent lefs in value than ficca rupees. Befides thefe, the Bombay and Madras rupees, are current in Bengal, and are three per cent below the ftandard, or ficca rupee. T.

poni,

poni; and fixty, or fixty-five ponis, according as there are few or many cowries in the country, make a rupee \*. They come from the *Maldive* illands. The moneychangers fit upon all the *bazars* with quantities of them, to furnish the lower orders with change, for the purchase of necessaries. One hundred thousand rupees make what is called a *lack*, and one hundred lacks, or ten millions of rupees, a *crore*.

Weights in Bengal, are calculated by maunds, of which there are three forts; all however, divided by forty feer, or eight paans feer. At Houghy, or Chinfurak, the maund kalfab, or Company's maund, weighs fixty-eight pounds Amsterdam; the maund bazar, feventy-fix; and the maund pakka, feventy-feven.

Two peculiar maunds are used at Cossimbazar; namely, the maund fitthur, for the filk-trade, which weighs seventy-two pounds, and the muts maund, which contains the

\* There is a great variation in the value of cowries in Bengal; RICAUD fays, 2,560 make a rupee; BOLTS, 4,000 to 4;800; and our author, 4,800, to 5,200. The cheapnels of provisions in Bengal, makes it convenient to have fo very low a medium, for dealings among the poor. T.

weight

# [ 463 ]

weight of three thousand two hundred fieca

A feer kalfab is  $1\frac{1}{16}lb$ ; a feer bazar,  $1\frac{2}{16}$ ; and a feer pakka  $1\frac{1}{16}$ .

Weights made of stones are used for weighing by *feers*, which is the general medium of fale of almost every thing, even vegetables and milk not excepted.

The measures of length, are cobidos, and gefs, or gofs. At Chinfurab, a cobido is one foot five inches Rhineland measure \*. The general length of the cobido, is taken to be from the elbow of a full grown man, to the tip of the middle finger, in the fame manner as the cubit of the ancients. A gefs, or gofs, is two cobidos, being, at Chinfurab, two feet and ten inches Rhineland measure. The cobido, is the universal meafure of length, all over the west of India.

Diftances between places, are measured by cofs; five cofs, are equal to about two Dutch miles +.

\* The cobido in Bengal is, as near as poffible  $\frac{33}{64}$  of an **Inglifu** yard; the exact proportion is, that 7,278 cobidos make 3,773 yards. T.

† The coss in Bengal is generally taken, by the English, to be about two miles; in the upper parts of Indostan it is only about one and a half. T.

The

# [ 464 ]

The day and night, are here divided into four quarters, each of fix hours, and thefe again into fifteen parts, of twenty-four minutes each. For a chronometer, they use a kind of difh of thin brafs, at the bottom of which there is a little hole : this is put into a veffel or large pot with water; and it runs full in a certain time. They begin their first quarter at fix o'clock in the morning. They strike the quarters and subdivisions of time, with a wooden hammer, upon a flat piece of iron, or steel, of about ten inches in diameter, which is called a garnial, and gives a pretty fmart found, which can be heard at fome diftance. The quarters are first struck, and then as many times as the brafs difh has run full, in that quarter. None but the chief men of a diftrict are allowed to have a garnial, and still they may not strike the first division of the first quarter, which is a privilege referved to the nabob alone. Those who attend at these clocks, must be of the brahmin caste.

The veffels which are used for inland navigation, on the Ganges, are very lightly built of thin deals, without either keel or fide-timbers. The edges of the planks are fastened

fastened together with staples, and the feams are stopped up with moss, and payed with grease. The largest width of them is about one-third of their whole length from the stern, where they run up with a bend; they are very sharp forwards, and are not very high above the water. Although they are of different sizes, they are all of the same shape and construction; and some of them can load fifty thousand pounds weight of merchandize, and more \*.

The boats used by the Europeans, as well as by the natives of confideration, for travelling, are called *budgerows*. On the outfide they have the fame construction with the former, but within, they are calculated for convenience. The space from the mid-

\* Thefe boats are called *burs* in *Bengal*; they are rude barks, and have a fingle maft, with a large fquare fail; they take in a great quantity of water from the fides and bottoms, which compels the crew to employ fome people continually in baling. They are ufed for the carriage of cotton, and other bulky materials, the weights of which cannot bear any proportion to their fize. In common with all the other boats of the country, their bottoms are nearly flat; indeed it would be impracticable, on the *Ganges*, to employ veffels calculated to draw any confiderable quantity of water, as the navigation is rendered extremely dangerous, from the fands being continually fhifting. *T*.

VOL. I.

dle

dle to the stern, is occupied by one or two apartments, having windows on the fides; these rooms are from fix to seven feet in height, and are as commodious as if they were in a house. The sternmost of them. is the bedroom. The budgerows are of va. rious fizes, from twenty-five to fixty feet in length, and longer. They are rowed, as they former are, by from fix to twenty men. The oars are long poles, to the end of which a little oval board is nailed, in lieu of a leaf; they do not ftrike the water crofs ways, but obliquely backwards. Somewhat more forwards ftands a maft, upon which a fquare fail is hoifted, when they go before the wind; when they have a fidewind, they drive down athwart the ftream. not having a keel, or timber enough under water, being flatbottomed, and drawing fearcely a foot, or a foot and a half \*.

They

\* The budgerows are fleered by a large paddle, or oar, extending ten feet from the flern; and befides the maft mentioned in the text, they have likewife a topmaft, with a fquare topfail, for fine weather. The English gentlemen in Bengal, have made great improvements in the budgerows, by introducing a broad flat floor, fquare flerns, and broad bows. They thereby are rendered much fafer, fail near, and keep their

# · [ 467 ]

They have another kind of boats, which they call *pulwabs*. Thefe are very long, low, and narrow; they are not calculated for the conveyance of goods: they are fculled inftead of being rowed, and they are very expeditious for paffing from one place to another \*.

their wind; and there is no danger attending their taking the ground; they are befides calculated to carry more fail. T.

\* A gentleman in his budgerow, is usually attended by a pulwab, for the accommodation of the kitchen, and a smaller boat, which is called a *paunchway*, and is defined to convey him either on fhore, or on board, as it frequently happens that the budgerow cannot come close to the place where he wifnes to land, or to embark. These boats move more expeditiously than the budgerows; but the paunchways are nearly of the fame general construction, with this difference, that the greatest breadth is somewhat farther aft, and the stern lower. Another boat of this country, which is very curioufly constructed, is called a moorpunkey: these are very long and narrow, fometimes extending to upwards of an hundred feet in length, and not more than eight feet in breadth; they are always paddled, fometimes by forty men, and are steered by a large paddle from the ftern, which rifes either in the shape of a peacock, a fnake, or fome other animal; the paddlers are directed by a man who flands up, and fometimes makes ufe of a branch of a plant, to regulate their motions, using much gesticulation, and teiling his story, to excite either laughter, or exertion. In one part of the ftern is a canopy supported by pillars, in which are feated the owner and his friends, who partake of the refreshing breezes of the evening : these boats

н н 2

are

At

At land, the general conveyance of paffengers is by *palankeens*, which are a fort of litters. For carrying goods, carts of a very fimple conftruction are made ufe of; they are drawn by oxen, or buffaloes \*. But the transporting of goods is mostly effected by water, through the numerous channels and creeks, with which the country is interfected.

Among the land-animals which are found here, the elephant holds the first rank, on account of its fize. I faw four of these unwieldly creatures at *Hougly*, who were full twelve feet in height. Each of them had a conductor, who fat upon the neck, and was able, with a short iron hook which he held in his hand, together with his voice, to govern the huge animal at pleafure.

Tigers are very numerous in the woods, and they often fally out into the inhabited places. I faw fome of them, which were kept, in wooden cages, by the English at

are very expensive, owing to the beautiful decorations of painted and gilt ornaments, which are highly varnished, and exhibit a confiderable degree of taske. T.

\* These carts are called *backeries*; they run upon two wheels, and have a covering. T.

Calcutta,

Calcutta, of the fize of a large calf. The great men of the land take much pleafure in making them fight with other animals, elephants and buffaloes.

There are likewife a vaft number of wild buffaloes in the woods; they are much larger and fiercer than bulls; they have horns of full five feet in length, and it is very dangerous to meet with them, if not provided with firearms. Even then, if one has the misfortune not to kill them outright, the danger is still greater, unless a neighbouring tree, into which the man must instantly climb, offer its friendly protection. The crew of my ship killed several of them at Ingellee; their flesh is tolerably good eating, and the females, when they are tamed, are milked like cows; yet their milk is not efteemed wholefome, being fuppofed to be heating and acrimonious.

Jackals are a fort of wild dogs, fomewhat larger than a common fpaniel; they have a thick head, and a fharp nofe; their fur is brown, and the hair long; they have a thick and rough tail, which hangs down; they do not run fast, unless when hunted. The woods fwarm with them; they come down

ннз

down to the fides of the river, towards the evening, and feed upon the carrion, and the dead bodies which are neither burnt nor buried, and which, if they were to remain there, would fill the air with putrid effluviæ, and be the occafion of peftilential diforders. The Indian name for these animals is *chakal*. Their cry is like that of a human being.

Snakes, of all kinds, abound in the fields, and in the old buildings. It is therefore very dangerous, in damp weather, to walk in the grafs, where their infidious folds lie concealed from the eye of the unwary paffenger. If they are unfortunately trod upon, they are fure to bite the offender; but if one of the ferpent-charmers be immediately at hand, by fuffering a little pain, a cure is foon effected; without their affiftance, death is often the confequence.

Scorpions, centipedes, and a great many other infects, are likewife pretty abundant. The most troublefome of all, are the flies, gnats, and bugs, which torment the inhabitants, both day and night.

Great numbers of birds of prey are also feen here. Among them, a kind of eagle is

is the most remarkable for fize. They feed upon nothing but dead carcafes. There are likewise aftonishing numbers of birds of prey, which are about the fize of a kite, and so bold, that, in flying, they will pounce down, and fnatch a piece of meat, or bread, out of the hands of a man: I faw them frequently do this to the children of the house where I lived. As well as the jackals, they are of great benefit in this country, by devouring the carrion.

There are but very few different forts of fish in the rivers: one called the baldhead is thought to be the best tasted.

There are likewife crocodiles, or alligators, but which are not, in general, very large.

The Bengalese and Moors have each a diffinct language and writing. That of the latter has much analogy with the Persian, and is the language of the court.

The chief articles of commerce which the country yields, are filk, muflins, callicoes, cottons, and other piecegoods; opium, faltpetre, and gumlack. Others, fuch as wheat, rice, butter, &c. can only be reckoned cafual branches of trade.

нн4

Sill

Silk is chiefly prepared in the neighbourhood of Collimbazar. The manner of collecting is as follows: at the time of the year when it is thought the fittest for the filkworm to begin its labours, the eggs which were preferved from the last featon, upon a piece of white cotton, are exposed to the rays of the fun. As foon as the worms are hatched, they are put upon another white piece of cotton, with a mat under it, and laid under cover; they are then furnished every day with fresh leaves of a fort of mulberry-tree, called here toot, the fruit of which is not fit to be eaten. They do not fuffer the plants of this tree to fhoot up more than three or four feet. whereby they prevent the leaves from growing hard, of which the confequence would be, that the filk would be coarfer, and of an inferior quality.

In the mean time, a round mat is prepared, which has a flip, or border, of about two inches deep, ftanding upright upon it, encircling first its outer edge, and then running in a spiral direction, to the center, leaving an intermediate space of about an inch and a half. As foon as they perceive that a worm is, about to fpin, they take it away from the others, and put it upon this mat, between the borders, where it fpins its ball, or cocoon, which is afterwards reeled off in warm water.

The nymphæ which come from the cocoons that are receled off, are not thought fit for preferving the eggs of them; but those which they keep for that purpose, are fuffered, when they become moths, to eat their way through the balls; and of these perforated cocoons they make an inferior kind of filk, called floret.

The materials from which their piecegoods are wove, is the *capok*, or cotton. It grows upon a fhrub, or tree, which is cultivated in very great abundance, in this country, though yet not in fufficient quantities for all the piecegoods which are annually manufactured here; for much of it is brought hither from *Surat*. Some kinds of piecegoods, likewife, require two different forts of *capok*.

The capek is firetched with a wire, upon an arched piece of wood, like a bow, clean, ed from all its impurities, fpun by the women

men into yarn, and finally woven into piecegoods of various denominations by the men.

The weaving manufactories are difperfed throughout the country, and are call *aurungs*. A diffinct kind is wove in every diffrict.

Printed cottons, commonly called chintzes, are not manufactured here, but on the coast of *Coromandel*; except near *Patna*, in the province of *Bahar*, whence fome of them come, which are called, from the name of the place, *Patna* chintzes.

The fineft muflins and cottons are made about *Dacca*, where likewife the fineft *capok* is produced.

Opium is a very important production, both for the inland trade, and that which is carried on by fea, to the coaft of Coromandel, and Batavia. It is not, in fact, produced in Bengal, but in Bahar, which borders upon the former; but all that is exported, comes down the Ganges, through Bengal. More than one hundred thoutand pounds weight of this drug is annually fhipped by our Company's veffels, and is confumedat Java, the Moluccas, and other places in the eaftern part of Afia. The natives of all those those countries are very fond of it, finoking it together with their tobacco, or chewing it unmixed.

The mode in which it is collected is as follows: the feed is fown in the month of October, in a foil which has been fpecially prepared for the purpose, not without much trouble.

A fortnight or three weeks afterwards, fome of the feeds are dug up, in order to fee whether they have already germinated and ftruck root; if this be the cafe, they begin to water the fields, which are all cut through with furrows, conveying the moifture to every part.

When the bulbous root of the plant begins to arrive at maturity, which only happens after the petals of the flowers have fallen, the planter daily examines one of the pooreft roots, to fee whether they are ripe enough for collecting the fap; for this purpofe he makesufe of a little fharp knife, with which, in the morning, he makes an incifion in the bulb, and if he find, in the evening, that a gummy fap, the opium, have exfuded from it, it is a fign that the roots are fufficiently ripe. Hereupon, men, women, and children,

dren, for an incredible number of people are employed in this work, refort to the opium-fields, in order to open the bulbs. They take them in the hollow of the hand. holding them fast by the stalk between the fingers, and make the incision, yet with great precaution, that the inner membrane be not wounded, for then the root dies infantly. After having thus cut open the roots in the evening, they all return, early the next morning, to the field, each with a little pot, and gently fcrape off, with a little shell, the congealed fap, which has extilled from the bulb, into the pot, giving another cut in the root, the produce of which they again collect in the evening.

If the roots be fine and large, the incifion can be repeated three or four times.

The fap, which is collected both morning and evening, is delivered to the proprietor of the field, upon the return of the lahourers; and it is then put all together into large tubs, where it purifies itfelf by fermentation.

The collection of the opium takes place in the months of January and February.

A piece

[ 477 ]

A piece of land of ten rood fquare \*, is generally estimated to yield five or fix pounds weight of opium, and affords a great profit to the planter.

When the fap has done fermenting, and has attained a proper degree of confiftence, it is made into cakes. The leaves of trees, which have fallen, are then collected from the ground, and after being wetted, one by one, are fluck together, about the fize of a common plate: the gummy fubftance is next taken up by the hands, laid upon the leaves, three or four inches thick, and covered over with the fame leaves.

It is then carried to the factory, where it is narrowly examined, afforted, and packed in fquare boxes, which are lined with leather; thefe are then embaled in goenje  $\dagger$ , weighed, the grofs weight marked upon them, and fent down from *Patna* to *Hougly*, or *Chinfurab*. They are weighed here again, without unpacking them; and if they are found to weigh two or three

\* A rood is the fourth part of an acre.  $\mathcal{T}$ .

† A kind of coarfe and strong cloth, or canvas, like carpeting, used for embaling of goods. T.

pounds

pounds lefs than at *Patna*, they are approved of; for opium always dries up, and becomes lighter; but if they are heavier, it is a fign that they have received damage from water, during the paffage down, and they are then unpacked, and afforted anew, before they are fhipped to *Batavia*.

A gentleman who had refided many years at *Patna*, and from whom I obtained the above particulars, told me, that the quantity of this drug collected annually in *Babar*, amounted to fixte en thoufand maunds, which make upwards of one million of pounds; the largest part of which is employed in the inland trade, and is conveyed by land-carriage from *Indostan*, to almost every part of *Afia*.

Saltpetre is likewife a principal article, which is annually exported from *Bengal*, and is equally produced in the province of *Babar*. It is a natural falt, thrown up out of the ground, and, being mixed with earth, it is taken in this flate, put into large troughs, water poured upon it, and flirred about, till the nitrous particles are diffolved : the water, thus impregnated, is drawn off, and

and being boiled in large pans, the moifture evaporates, and leaves the faltpetre behind; which is then, without farther preparation, put into bags to be fhipped off.

In the year 1770, full two millions and a half pounds weight, of this article, was exported by the fix fhips of our Company, which failed from *Bengal*, in that year, three bound to *Batavia*, and three to *Holland*.

Gumlack is produced from a fort of fmall infects, which are not unlike flying ants. Much of it is collected in the most eastern parts of Bengal, and in the kingdom of Pegu. The inhabitants flick little twigs in the earth, upon which these infects alight in large quantities, and leave a vifcid juice be-, hind them, with which the whole twig is covered. When this is hardened by the fun, it becomes a refinous gum, and when diffolved in water, affords a fine, bright, red colour; it is used for dying of cottons, especially on the coast of Coromandel. When it is melted over the fire, and feparated from the remains of the twigs, shellack is made of it, in flat thin pieces, which are efteemed efteemed good, when they tun down by drops, if fet on fire.

The articles which are disposed of to advantage in *Bengal*, are all kinds of spices, pepper, japan copper, fandalwood, and sapanwood; likewise tin, lead, pewter, and other European commodities.

## CHAPTER V.

Furopean Nations in BENGAL.—The English.— Events which gave Rife to their Power here.— Battle of Plassey.—Anecdote of Lord CLIVE.— Their Revenues.—Government.—Fortunes made by Individuals.—Oppression of the Natives.—Description of CALGUTTA.—Fort WILLIAM.— Their other Fortifications and great Strength.— Misunderstanding between the English and Dutch. —Miscondust of a Dutch Direstor.—The Dutch Fastory.—Their Government.—Direstor.— Chief of COSSIMBAZAR.—Head-Administrator.—Su evintendent in the Cloth-room.—Chief of the Miktary. —First Warehousekeeper.—Fiscal, or Sherist.— Comptroller of Equipment.—Dispensier, or Purveyor.—Secretary.—Gouncil of Justice.

FOUR European nations have established themselves here, for the purposes of commerce; namely, the English, the Dutch, the French, and the Danes. The East-India Company of Ostend, had formerly a factory here, about two Dutch miles below our's, on the eastern bank of the Ganges, at a place called Bankibazar, but which, VOL. I. I I after

after a long fiege, having been taken by the Moors, in 1738, or 1739<sup>\*</sup>, the Oftend Company were obliged to abandon the trade of *Bengal*.

Of the four abovementioned European nations, the Englifh are, at prefent, the principal; being, fince their victories over the armies of the nabob, and the great Mogul, in a great measure, territorial fovereigns of the country: and they make use of their power, in this respect, to circumscribe, at pleasure, the trade of other nations.

Although they established a commercial intercourse with this country, at an early period, they made but an infignificant figure, in comparison with us, before the years 1755 and 1756, when their trade, after having been brought to the brink of destruction, rose, like a phoenix, out of its asses; and their Company have fince arrived at a pitch of power and prosperity in the western parts of India, equal 10 that of our's in the eastern. This great change proceeded from a very trifling circumstance, and one that feemed, on the contrary, to threaten their entire ruin.

\* This happened in the year 1748. 7.

In

In the year 1756, the nabob of Coffimbazar, or viceroy of Bengal, defiring to have fome European goods, fent one of his officers, for that purpofe, to the chief fettleanent of the English at Calcutta. The governor at that time, who was a man of a brutal and infolent disposition, instead of complying with the defire of the nabob, having fome real, or imaginary, motives for disfatisfaction, had the envoy feized, tied to a stake, and slogged, fending him back to his master, without the things he came for #.

#### This,

\* The transaction upon which this misrepresentation is founded, happened in the following manner: -- SURAJAR DOWLAH, the new nabob of Bougal, one or two days after his acceffion, in the beginning of April, 1756, wrote a letter to the prefident of *Calcutta*, ordering him to deliver up a man who had taken refuge with the English from the known tyrannical disposition of the nabob, with his treasures. The bearer of this letter, came in a fmall boat, and landed in the difguise of a common pedlar. He immediately proceeded to the house of OMICHUND, a native merchant, who was ftrongly fuspected of intriguing with the nabob, against the English. OMICHUND, as the governor, Mr. DRAKE, was absent, introduced him to Mr. HOLWELL, a member of the counci's who superintended the police of the town. The governor returning the next day, fummoned a council, of which the majority being prepoffelled against OMICHUND, concluded 112 that

## [ 484 ]

This, as may eafily be conceived, fo much incenfed the nabob, that he immediately

that the meffenger was an engine prepared by himfelf to alarm them, and reftore his own importance: the council refolved that both the mellenger and his letter were too fufpicious to be received ; and the fervants who were ordered to bid him depart, turned him out of the factory, and off the fhore, with infolence and derifion. It was not this circumstance alone that induced SURAIAN DOWLAN to attack Calcutte, but other caufes of more importance; the determined disposition of the tyrant from the beginning to moleft the English; the machinations of the French at his court 1 and offenfibly, a letter written by Mr. DRAKE, in answer to one from the nabob. fignifying that he had been informed the English were building a wall, and digging a large ditch round Calcutte, and ordering him immediately to defift, and to deftroy all the works which might have been added to the fortifications: in his reply, the governor, perhaps imprudently, wrote, " that " the nabob had been mifinformed by those who had repre-" fented to him that the English were building a wall, and " digging a ditch round the town; that in the late war between " England and France, the French had attacked and taken " the town of Madras, contrary to the neutrality which it " was expected would have been preferved in the Mogul's " dominion ; and that there being at prefent great appearance " of another war between the two nations, the English appre-" hended that the French would act in the fame manner in " Bengal : to prevent which, they were repairing their line of " guns on the bank of the river." It was upon receipt of this letter, on the 7th of May, at Rajamabel that the nabob infantly ordered his army to march back to Coffinbaser, where the English factory furrendered to him on the 4th of June; and on the 20th following, Calcutta was taken. T.

marched

marched with a body of troops, against Calcutta, took and plundered the place, and put to death feveral of the English, who had not been able to escape to their ships. From this beginning, proceeded the war, which the English afterwards waged with so much success, that they penetrated even as far as *Debly*, the capital city of the great Mogul, made themselves masters of his person, and rendered a great part of this powerful empire, tributary to them; more especially the kingdoms of *Bengal* and *Babar*, where they are now absolute source for the source of the sourc

The most important victory which they obtained, was that of *Plassey*, which decided the fate of these regions, and in which battle they were forced to combat an army of fisty thousand men, commanded by the vizier of the Mogul empire, SURAJAH DOWLAH, with scarcely five hundred Europeans, and a small number of *sipabis*. As there remained no alternative for this little body of men,

\* Perhaps the only apology to be offered for the conquests of the English in *Beng*. *l*, is that of MARMONTEL for the Spaniards in *Peru*; pour remoncer à la conquête il est fallu une fage fe que les peuples n'ont jamais eues, is que les rois ont rarement. T.

113

than

than to conquer or die, they fought with the intrepidity of despair, and obtained a complete victory \*.

General CLIVE, who fhould have been the leader of the English troops in this battle, left the command to Colonel COOTE, and remained hid in his palankeen, during the combat, out of the reach of the shot, and did not make his appearance before the enemy were put to flight. Several English officers, who were present at the battle, related this anecdote to me  $\pm$ .

\* The battle of Plaffey was fought on the 24th of June, 1757; the army of the nabob confifted of about 50,000 foor, 18,000 horfe, and 53 pieces of cannon. The numbers of the little body opposed to this multitude, were 900 Europeans, of whom 100 were artillery-men, and 50 failors, and 2100 fepoys, with eight fieldpieces, and two howitzers. T.

Of

Of the immense annual revenue, which they draw from these wealthy provinces. they pay twenty-five lacks of rupees to the Mogul and nabob, and retain the remainder. which amounts to more than as much again. for themfelves \*. A great part hereof, however.

" tank ; this was a good flation to cannonade the enemy <sup>46</sup> from, during their retreat; and Major Kilpatrick advanced 44 with two companies of the battallion, and two fieldpieces. 46 towards the tank, and fent information of his intention, and " the reafon of it, to his commander, who chanced at this " time to be lying down in the hunting-houfe" (a feat of the nabob, clofe to the field of battle). " Some fay he was afleep ; which is not improbable, confidering his exertions " during the preceding day and night; but this is no imputa-<sup>54</sup> tion either against his courage or conduct. Starting up, he <sup>46</sup> ran immediately to the detachment, reprimanded Kilpatrick " fharply for acting without his orders; and then proceeded " himself with the detachment to the tank, which Sinfray " abandoned, and retreated to the redoubts of the intrench-" ment." This was followed by the most intrepid and active exercions of Colonel CLIVE, and a most decisive and imporfant victory, by which the whole of the enemy's camp, their artillery, elephants, &c. fell into the hands of the English, who loft no more than about 20 Europeans, and 52 fepoys, killed and wounded. T.

\* The revenues of Bengal, and the advantages refulting to the Company and the country from our acquisitions there, are topics, on which much has been written, more has been faid, and but very little understood. From one and a half to two millions pounds sterling, is probably the nearest calculation

114

ever, if not the whole, is abforbed by the expences of their military establishment, which is a very strong one. In the year 1770, they had about four thousand European foldiers, and thirty-five, or forty thoufand, *fipabis*, in pay.

Although they are, in fact, fovereigns of the country, and receive the revenues arifing from it, they are, however, wife enough not to fhew this openly. The Mogul retains a fhadow of authority, and the land is governed, as before, in his name, by a nabob, who is, however, appointed by the English, and dares not undertake any thing without their knowledge. For the purpose of keeping him under their controul, one of the members of their government, the fecond in the council of Calcutta, is always near his perfon, and prefides in his council. By this means, no measures are adopted by the nabob, but such as are confonant with the views of the council of Calcutta. The gentleman who fills this important office, is called the refident at the Durbar, by which is understood the

lation of the nett receipts of the Company, which are employed in the China-trade, and in inveftments in piecegoods to this country. T.

1 : 1

Moorifh

Moorifh council, and his influence and authority are fo great, that the title of nabob, or viceroy, ought rather to be given to him, than to the nominal nabob; for the latter is obliged to wait upon the refident every morning, to inform him of the occurrences of the preceding day. He is received without ceremony, and if the refident be occupied, must wait till he have leifure to afford an audience.

It may eafily be conceived, how ill this agrees with the pride of the orientals, who would not before permit the approach of any European, but in the most humble and respectful manner.

The office of refident at the Durbar, is not only very honourable, but it is likewife one of the most lucrative. Three or four years' enjoyment of it, is fufficient for the accumulation of a princely fortune.

In the year 1767, one of these residents returned to Europe with a fortune of nine millions of gilders; which he had obtained by his dexterous management of affairs, during the three years which he had filled this office.

When Lord CLIVE returned to England for

for the last time, he carried away, as it is faid, a crore of rupees, which is fifteen millions of gilders.

The yoke of fervitude, which the English have thus imposed upon the Moors, is not borne very patiently by them. On the contrary, they would do every thing in their power, to deliver themselves from their tyrants, if these were not so firmly established here. The only hope which remains for them, is, that if the land be wholly exhausted, the English will no more hold the means of maintaining themfelves in their poffef-The unfortunate Bengalese are still fions. worfe off; they are first oppressed by the Moors, and afterwards by the English ; and yet it is their manual labour that has purchafed all the immense riches, which have been drawn, from time immemorial, both by their neighbours in Afia, and their visitors from Europe, and have fucceffively fwelled the treasures of the Great Mogul, of their nabobs, and of the English East-India Company. They work for a mere trifle, and live frugally upon a little rice, and fome vegetables. Nothing, or very little of the fpecie that is imported, goes out of the country

try again, as the materials for their manufactures are produced in the land, except fome capok, which is brought from Surat. These poor people, who contribute fo much to the prosperity of the country, instead of being favoured and encouraged by the English, are, on the contrary, continually exposed to the rapacious extortions of their taikmasters. and are opprefied in every way, partly by open violence, and partly by monopolies, which the English have made of all articles necessary to life; the dried cowdung even not excepted, which these poor people use for fuel. But this is not fo much to be ascribed to the English Company, as to their fervants, who leave no means untried, to accumulate wealth. They do not trouble themselves about the manner of obtaining it, to they do but speedily amass the riches they are in fearch of. Inftead of preventing these monopolies, which were, in a great measure, the cause of the fcarcity of provifions which was felt in the fpring of 1770, the English government at Calcutta, fuffer them to exist unnoticed and unremedied; and it has, in confequence, not been improbably [ 492 ]

probably fulpected, that they are themfelves concerned in these iniquitous transactions.

The government of this prefidency, confifts of, a governor, who is entirely independent of those at *Madras* and *Bombay*, and ten members of the council, the fecond of whom, who is the resident at the *Durbar*, feldom affists at their deliberations. The general, or chief, of the military, is the third in rank; he is independent of the governor, and is only amenable to the council. The fourth member, is the fecond in the fuperintendence of the police at *Calcutta*; and others have each equally a particular separate office.

The governor does not possible near for much authority and power, as the Dutch governors, or directors, exercise in their governments. Nor is the subordination half fo strict in the English settlements, as in our's. The servants of the English Company have likewise the advantage, that they are sure sure sof vacancy, to be promoted in rank, according to the number of years they have been in the service. Promotions do not depend, as is the case with our Company, upon the favour of the chiefs, whereby,

by, with us, it frequently happens, that deferving men, who have ferved the Company for many years, with diligence and honour, are paffed over without notice, for want of influence, and of friends.

Calcutta, or Coulicatta, as it is called by the Moors, is the capital of the English in Bengal; although unwalled, it may justly deferve the name of a city, from its extent and numerous buildings \*.

It lies on the eaftern bank of the Ganges, about thirteen Dutch miles below Chinfurab, and nearly thirty from the mouth of the river at Ingellee,

The Ganges is here full as broad as before our factory, but it is much deeper, and navigable at all times for large fea-fhips. All their fhips lie before the town, anchored close to the fhore, which is very fteep, owing to the rapid currents running in the middle of the river; and the number of veffels feen here continually paffing and repatfing from all parts of India, give Calcutta the appear-

• In Holland, every place that is not fortified, or walled round, is called a village; hence the ridiculous affertion fo frequently to be met with, that the Hague is the largest village in Europe; it is, in fact, a large and flourishing town; London paight, in the fame manner, be called a village. T.

anco

ance of what it really is, a place of great wealth and commerce.

The buildings of the place extend full three miles along the river, and about half as much in breadth from it. There are many large and handfome edifices among them, which do not add a little to the beauty of the town. They would have a better effect, if they were built as regularly as at *Batavia*; but little fymmetry or order has been obferved in laying out the ftreets.

In the middle of the city, a large open place has been left, in which there is a great tank or refervoir, covering upwards of twenty-five acres of ground. It was dug by order of the government, to provide the inhabitants of *Calcutta* with water, as in the dry feafon the water of the *Ganges* becomes brackifh by the influx of the tide, while that in the tank is, on the contrary, very fweet and pleafant. The number of fprings which it contains, make the water in it always nearly at the fame level. It is railed round, no one may wafh in it, but all are at liberty to take as much water from it as they like.

Near this tank, is a stone monument, erected

erected in memory of thirty English prifoners, both men and women, who, when *Calcutta* was taken by the nabob SURAJAH DOWLAH, were shut up in a narrow prison, without any refreshment, and suffocated for want of fresh air \*.

A little farther is the courthouse, over which are two handsome assembly-rooms. In one of these are hung up the portraits of the king of France, and of the late queen, as large as life, which were brought by the English from *Chandernagore*, when they took that place, in the last war.

\* The reader need fcarcely be informed, that this mutilated account relates to the well-known tragic event, at the reduction of *Calcutta*, of the fuffocation of 123, out of 146 English prisoners, in the black bole prison. The fcene of this borrid transaction has become proverbial among Englishmen for a place of infufferable torment, and together with the inhuman tyrant, SURAFAH DOWLAH, by whole order our countrymen were devoted to this cruci death, both

#### ------ damned to everlasting fame,

cannot be mentioned but with execration and horror. The monument, which was erected by Mr. HOLWELL, one of the few furvivors, and whofe narrative of his fufferings is in every body's hands, is a handfome obelifk, about fifty feet high, inforibed with the names of the perfons who died in the blackhole, and whofe bodies were promifcuoufly thrown, the next morning, into the ditch of the fort.  $T_{1}$ 

Clofe

Clofe to the courthouse, stands a theatre, where plays are sometimes performed by amateurs.

Higher up, is an Armenian church, which is a large and noble building, provided with a handfome fteeple.

There was not, when I was there, any English church; but preparations were making for building one, and the necessary materials had been collected.

On the fide of the open place, before mentioned, between it and the river, is the old fort, of which nothing remains at prefent but the walls.

The new fort, which is called Fort William, and whence all the letters and refolutions of the prefidency are dated, is fituated about a quarter of an hour's walk from the city, by the fide of the Ganges, in an extenfive plain. It was begun to be built in the year 1757, when the Englifh had regained poffeffion of Calcutta. It is a regular pentagon, with feveral outworks. The ramparts are built of brick, half way up, finished with clay, and faced with gazons. Both the body of the fortres and the outworks, are furrounded by a wet ditch, which has has a fmall cunette, of fix or feven feet deep, in the middle. The water from the Ganges, can be let into the moat, to the height of eight feet, by means of floodgates, of which there are two to each outwork, conftructed in fuch a manner, that if an enemy be mafters of one, they cannot prevent, both the main ditch, and those of the other outworks, from retaining their water.

If all the works were mounted with cannon, there would be room for fix hundred pieces of artillery.

There are bombproof barracks built within the fort, for ten thousand men. Permission has likewise been given to every inhabitant of *Calcutta*, to build, if he choose it, a house in the fort, provided it be equally bombproof; but in the year 1770, no one had yet felt any inclination to avail of this privilege.

All the works are guarded by mines and countermines. No fhip can pass up or down the *Ganges* without being exposed to the fire of this fort. No enemy can approach by land, without being difcerned at three or four leagues' diffance. an engineer, of the name of BOVER, who, for fome reason of discontent, left the English fervice, and entered into that of our Company. Another engineer was afterwards sent out from England, to finish it.

Close to the fort, the English were about digging a dry dock, which will be the only one which the Europeans have in India.

They were likewise busy in conftructing two batteries of heavy cannon, on the banks of the river, about two leagues below Calcutta, one on each fide. I was also told, that they intended to erect one, at the confluence of the Old Ganges with Houghy river, in order to be wholly mafters of the navigation of the Ganges.

This nation have thus fo firmly rooted themfelves in *Bengal*, that, treachery excepted, they have little to fear from an European enemy, especially as they can entirely command the passage up and down the river.

If they ever lofe their power here, their fall will, in all probability, proceed from the heavy expences, which they fuftain, in keeping up fo important a military eftablifhment, and which they cannot do without, in order

to

to keep the natives in fubjection, and prevent infurrections. By this means, however, they will, in time, exhauft the refources of the country, which appears the more likely, if we further take into confideration the extortions of their fervants.

Since the unfortunate iffue of our expedition to Bengal, in 1759, the reputation of our countrymen has been on the decline: and we are obliged to be not a little dependent upon the English, with respect to the piecegoods wanted for our cargoes, both for Batavia, and for Holland. In the beginning of the government of the director V-, in the year 1765, or 1766, when Lord CLIVE was still in Bengal, every thing feemed to take a friendly afpect, and arrangements refpecting trade were about to be made, to mutual fatisfaction and advantage. Both these gentlemen came to an agreement, that all the aurungs, or weaving manufactories, in Bengal, should be numbered, in order that a repartition might afterwards be made of fo many aurungs to each nation, for the purpose of weaving the goods they wanted; and two commiffaries were appointed, to this end, respectively, by the English, the Dutch, and the French, to go **K** K 2 through

through the whole country, and afcertain the number of manufactories. From our fettlement, the first warehousekeeper, Ross, and a bookkeeper, were deputed for this purpose.

But these excellent arrangements were all broken, by the departure of Lord CLIVE from Bengal; his lordship was succeeded by Mr. VERELST, with whom the director V—— shortly afterwards fell out, and their difagreement was carried to that point, that upon paying the customary annual national visit to Calcutta, Mr. V—— was treated in a most improper and humiliating manner; whence, in the end, so great a breach arose between these two chiefs, that the above arrangements were, much to our prejudice, entirely fet aside.

The English had equally, on their fides, much reason to be discontented with Mr. V—, as he had used his utmost endeavours to favour the French in all things, notwithstanding they had no power to render our Company any fervice, or even to help themsfelves; and the English were much hurt at this conduct, especially at Mr. V—'s felling all the japan copper, which the Dutch strong brought to Bengal, to

to the French, without allowing them the opportunity of purchafing a fingle pound, for a confiderable time, although they offered a higher price than was obtained from the French.

This was evidently, not only unfriendly, but wholly incompatible with the interefts of the Company; which appears the more ftrongly, if we confider that, upon the leaft difference with the Moors, the council at *Hougly* were obliged to have recourfe to the mediation and protection of the government at *Calcutta*, as was the cafe, two or threetimes, while I was in *Bengal*.

The Dutch began to trade in *Bengal*, as early as the commencement of the last century; they were always the first in opulence and importance, till the English became the rulers of the country, in the last revolution; and perhaps they would still have been so, had the well planned, but badly executed attempt, made, as beforementioned, during the administration of the governor general MossEL, in 1759, succeeded to our wishes \*.

#### Our

\* The expedition alluded to, though formally difavowed by the Dutch government, upon its not fucceeding, is here x x 3 pretty Our factory here, is fubordinate to the government at *Batavia*, and receives orders from that place refpecting the management of the trade. It is from *Batavia*, likewife, that all vacancies are filled up; the council of *Houghy* can only appoint *ad interim*; but the confirmation must come from the metropolis of India.

Orders and letters are, however, received at *Chinfurab* direct from *Holland*, whither, likewife, advices are annually difpatched.

The government confifts of a director, and feven members, five of whom have concluding voices, and the other two may only advife, but not vote. There is, befides, a chief at *Coffimbazar*.

The director, who has, of course, the chief

pretty clearly acknowledged to have been intended, for the purpole of depriving the Englith, of their fuperiority in *Bengal*. They fent feven thips, three of thirty-fix guns, three of twentyfix, and one of fixteen, with about 1, 100 European and Malay troops, from *Batavia*; who attempting to pass up the *Canges* to *Chinfurab*, the feven Dutch thips were fought and captured by three Englith armed Indiamen, and the troops were encountered, and totally defeated by Colonel Ford, with 500 men. They pretended that these forces, were intended to reinforce their fettlements, on the coast of *Commandel*, but had been obliged to put into the *Ganges*. T.

>

authority

authority over the commerce, and the poffeffions of the Company, is ftyled, the bonourable Director of the Company's important trade in the kingdoms of Bengal, Babar, and Orixa.

He is obliged, by his inftructions, to fubmit all matters, which are of any importance, to the confideration of the council, and to come to a conclusion on the fubject, by a majority of votes. But it feldom happens, that a resolution of council, is taken contrary to his inclination, for all the mem bers are dependent upon him,' with respect to the profits of their offices, as is the case throughout all India, both at the outfactories, and at *Batavia*, to the great detriment of the Company.

The emoluments attached to his office, amount to large fums; for, befides a certain per centage, allowed on the fale of all goods which are imported \*, there are numerous

• Five per cent upon the fale of goods imported, is divided, two-thirds to the director, and one-third to the fecond in command; and five per cent is allowed on the purchase of opium, and divided, two-fifths to the director, one-fifth to the chief administrator, three-tenths to the chief at *Patna*, and one-tenth to the second in command there. **T**.

K Ķ 4

other

other means of accumulating money, efpecially by his having large fums at his difpofal, and being confequently enabled tomake an immense profit by the employment of them; fo that it is impoffible for any one, not even those who fill the first offices in the administration, to know what the director annually gains, which must be an immense amount, without taking into confideration his enormous expenditure. Mr. V---- affured me, that he wanted no lefs than thirty-five thousand rupees a year, for his houshold expences; and this is but little. in comparison with some of his predecessors. and of the English governor at Calcutta, who fpends more than one hundred thousand rupees, by his own account, and that of feveral of the English, who confirmed it to me. The director is the only perfon, in the Company's fervice, who is allowed to be carried in a palankeen fitting upon a chair; even the director who is appointed to fucceed another, cannot do this, as long the government is in the hands of the other. Military honours are shewn to him at the gate of the fort. Six or eight chubdars, or as many as he pleafes, together with other attendants, both

both *peons* \* and other fervants, run before him. When he is carried, or rides through the town, the natives are obliged, at fome places, to play upon their inftruments of mufic, clarions and drums. *Chubdars* are Moorifh fervants, who are employed to carry meffages, and for ftate; they carry a long ftaff in their hand, which is entirely covered with filver, with which they go before the palankeens of the director, and of the two members of the council next in rank; but the latter are allowed no more than two *chubdars*, and their ftaves may only be half plated with filver.

The fecond perfon in the direction is the chief at *Coffimbazar*. He has the rank of fenior merchant, and the management and controul of the factory there, or rather at *Calcapore*, which is not far off. The Company's refidents at the Mint, in *Moor fhedabad*, where the filver is recoined, in the name of the emperor, are under him. He has a detachment of twenty-four men at his factory.

\* Peases are properly foot-foldiers, armed with a fword and target. Footmen, armed in the fame manner, are likewife used for state, and to run before the palankeens. T.

The

The third perfon of the council, is the chirf administrator. He has equally the rank of fenior merchant, and is treated with the fame respect as the chief at *Coffimbazar*, whofe place in the council, when he is abfent, is fupplied by the former, as fecond in rank at the chief fettlement, where he always remains. Every thing regarding commerce, and the warehouses, is entrusted to this officer, subject to the superior controul of the director.

A member of the council is likewife fuperintendant in the cloth-room, or walk, as it is called, which is the place where the Company's piecegoods are received from the Indian merchans, examined, afforted, and difpatched.

The affortment is made into four different claffes, from beft to bad, under the denominations of *duel*, *doom*, *feer*, and *firty*, and the examination and attestation of them, is done by the council, together with the director.

This office is one of the most profitable in the direction, when the Company take many goods. It is reekoned equal to that of a merchant.

The

The fuperintendant has a fecond under him, with the rank of junior merchant, together with three others, who are bookkeepers or affiftants, and have the direction of the packing of the goods. He has likewife feveral banyans, who poffers more knowledge than all the reft, and by whom most of the bufines is done, although the others, and the council, have the name of it.

Their emoluments are divided in the following manner.—One rupee or thirty flivers, is allowed on the value of every hundred rupees purchafed by the Company. Of this, eight flivers are given to the head adminiflrator, eleven to the fuperintendant in the cloth-room, fix to his fecond, two and a half to the first packer, one and a half to the fecond, and one to the third, making, together, thirty flivers, or one rupee.

The captain, or chief, of the military is alfo a member of the council; but he has no vote, and can only give his opinion. He has the rank of fenior merchant, and follows immediately upon the head administrator. His income is small, and scarcely sufficient for his sublistence.

The first warehousekeeper, who is at the same

fame time commercial bookkeeper, has the rank of merchant. All merchandize which are received into, or delivered out of, the warehouses, by order of the head administrator, are under his management; as likewise the books that relate to trade.

The fifcal, or fheriff, who is, at the fame time, mayor of the town, has the rank of merchant, as long as he is in that flation, though he has only the pay and allowance of junior merchant.

As fiscal, he must take care that the Company's dues are not defrauded by the private trade of their fervants, and as mayor, he determines all trifling disputes which arise among the natives, who live within the Company's limits. He punishes the offences which they commit, by flogging at a stake, or he imposes fines upon the offenders; which laft is, in fact, what is most frequently done, and hence his post becomes one of the chiefest and most lucrative of the fettlement. Many inftances were related to me, at Chinfurab, of extortions practifed by fifcals, which almost exceed belief. They make the wealthy banyans pay twenty or thirty thousand rupees, for the flightest fault, and

and if they do not provide the money foon enough, they are tied up, and whipped, till it is brought. He is called *jemautdaar* by the natives, which is as much as mayor, or commandant.

His emoluments, as fifcal, are five per cent upon all goods, which are imported by private individuals, above the privileged tonnage, allowed by the Company to their fhips' officers, and five per cent on all goods exported in private trade, whether privileged or not \*.

Upon an average he can make more than four thousand rupees by every ship; and as fix ships come and go, in general, every year, his income, on this score, amounts to twentyfour thousand rupees.

The Indians stand, perhaps, more in awe of the fiscal, on account of his office, than of the director himself : and when he goes through the town, music is equally played in his honour as he passes, as well as for the director.

The comptroller of equipment has alfo a

\* One-half of the contraband goods which he feizes, is likewife the property of the fifcal, out of which, however, he must fatisfy the informers. T.

leat

feat in the council, but, as well as the commander of the military, he may only deliver his fentiments, but has no vote. If he be a thip's captain, he has the rank of merchant. His office is also none of the worst.

The difpenfier, or purveyor in the Company's provision-warehouses, has the rank of junior merchant, and is invoicekeeper.

A fecretary is added to the council, who is generally, at the fame time, cafhier. The latter office brings him in great profits, when he has any fums of confideration under his care, which is always the cafe, if he be on good terms with the director. He places this money, at an exorbitant intereft, among the Indians. The fecretary who was in office when I was there, had the rank of bookkeeper, though it is otherwife an office generally filled by a junior merchant.

Befides this civil council, there is a council of juffice, of which the head adminiftrator is prefident. They pafs fentences of death, fubject to the confirmation of the government at *Batavia*, but they are not allowed by the Moorifh government to carry them into execution, except within the walls

# [ <u>511</u> ]

of the Company's lodge, or on board of their fhips.

Whoever has the rank of junior merchant, or higher, must be fent to *Batavia*, with the papers relative to the profecution against him, not with standing fentence of death may have been pronounced upon him, by the council of justice here; as was the case, in the year 1766, with Captain VAN DER LINDEN, commanding the ship *Kattendyk*, and his first lieutenant, WELGEVAREN.

The other members of the council of juftice, are junior merchants, and there are two military officers among them. Their office is of little importance, or advantage.

### CHAPTER VI.

The Company's Posseffors in BENGAL.—CHINSU-RAH.—Euildings—Markets.—Houses.—Church. —House called Welgeleegen, and Gardens.—The Company's Lodge, or Fort GUSTAVUS.— Company's Garden.—Church-yard.—Battery.— Freemason's Lodge.—Hougly.—Factory at PATNA.—Factory at DACCA.—BERNAGORE.— Establishment of the Company.

THE territorial property of the Company in *Bengal*, is confined to the towns, or villages, of *Chinfurab* and *Bernagore*. Thefe were obtained by gift, or rather by purchafe, from the Moorifh government.

They have, further, their lodges or factories at *Calcapore* near *Coffimbazar*, at *Patna*, and at *Dacca*; and they have likewife a guard of natives at *Ballafore*. They had formerly a factory at *Malda*, for the filktrade; but this has been abandoned for feveral years.

Chinfurab, known in the records and papers of the Company, by the name of Hougly, lies

lies on the weftern bank of the Ganges, full forty leagues from its mouth at Ingellee, and about ninety from Patna. It is partly built along the river, and requires full three quarters of an hour to walk round it. On the landfide, it is clofed by ftrong barrier-gates. Within, it is built very irregularly. It has many markets, which are here called *bazars*, at which all kinds of goods, and efpecially provisions, are fold; the *bazar* of the money-changers, which is a long and broad ftreet, is the handfomeft.

The principal houfes are built of brick, with terrace-roofs, in the Moorifh ftyle. They are but of one ftory, and are whitened on the outfide with lime, which gives them an elegant appearance.

As little wood as poffible is ufed in building, on account of the white ants, which entirely deftroy the infide of the wood, in a very few years. Thefe infects are formidable from the immenfity of their numbers. They eat away the ends of the beams which are inferted in the maionry, fo that they fometimes fall down, without fhewing any previous figns of decay; for no marks of the depredations of vol. 1, L L the the ants appear on the outlide. Nothing that has hitherto been tried to counterast this evil, has been found of any avail.

Glafs windows are not known here. Frames of twifted cane, are made use of in their ftead. Glafs would be very uncomfortable in the great heats, which prevail for eight or nine months in the year. When the winds from the north, in December and January, blow hard, the wintlows and doors which open to that quarter are thut, and those which look to the fouth ftand open. The apartments are roomy, airy, and provided on the fouth fide with galleries, or porticos, refting upon pillars.

The terrace-roofs, and the floors of the rooms, are laid with fine pulverized flones, which they call *zurkee*; thefe are mixed up with limewater, and an inferior kind of molaffes, and in a fhort time grow as hard, and as fmooth, as if the whole was one large flone. The inhabitants take the evening air upon their terraces, and fometimes pass a part of the night upon them, in company with their friends.

The houses, or rather the huts, of the poor

poor Bengalese, are mostly made of mud and straw, and receive their light through the entrance.

Chinfurab has a handfome little church, with a fteeple. The firft was built by the director SICHTERMAN, and the laft was added by Mr. VERNET. There is no regular clergyman belonging to this church, but fervice is performed by a ziekentroofter\*, who reads a fermon, on Sunday morning. When any children are to be baptized, the Englifh clergyman from Calcutta is fent for, who is liberally paid for his trouble, by the parents.

Mr. SICHTERMAN erected a very handfome building, not far from the church, to which he gave the name of *Welgeleegen* (well fituated). It lies clofe to the *Ganges*, and a gallery, with a double row of pillars, projects over the water, above which is an elegant terrace and balcony, which commands the finest prospect at *Chinfurab*; on one fide the view extends as far as *Chan*-

\* A ziekentroofter is a perfon not in orders, who officiates as chaplain on board of fhips, reading prayers, and attending the fick when at the point of death; from this last function, he is called ziekentroofter, or literally, a comforter of the fick. T.

LL2 dernagore,

dernagore, and on the other beyond Bandel. The gardens which are adjoining to this building, are delightfully shady and pleafant.

The Company's lodge, which bears the name of Fort Gustavus, is constructed in a large open place, about five hundred, or five hundred and fifty, feet from the river. It is an oblong fquare; the longest fides, which are opposite to north and fouth, are about fix hundred and fixty feet in length; the shortest, about the half. It was built in the year 1656, as appears by the date over the landgate. The walls are of stone. about fifteen feet high; but they are, at prefent, in fuch a ruinous condition, that it would be dangerous to difcharge the cannon which are mounted upon them. Within, are the Company's warehouses, and the house of the director, which is the only thing worth feeing. There are three gates, one by the river, one on the landfide, to the north, and another to the fouth ; this laft leads to what is called the Company's garden, in which there is neither a bufh, nor a blade of grass.

To the weftward of the lodge, there was formerly

formerly a burying-ground, which was adorned with many handfome tombs, and graveftones. But thefe were all deftroyed under the government of the director TAIL-LEFERT, except the monument of the director HUISMAN, which was transformed into a powder-magazine. The reft was made into a level plain, and the buryingplace was removed to another part of the town, where now every grave has an upright tombftone upon it.

A battery of one-and-twenty pieces of cannon, is thrown up, by the riverfide, for the purpole of firing falutes.

Something more than a quarter of an hour's walk out of *Chinfurab*, towards *Chandernagore*, a large and handfome houfe was erected, during the direction of Mr. VER-NET, as a lodge for the free-mafons, which was completed and inaugurated while I was there. This feftivity concluded in the evening with a magnificent firework and ball, at which the chief Englifh and French ladies and gentlemen were equally prefent.

This building, to which the name of Concordia was given, cost thirty thousand rupees, and the money was defrayed out of LL3 the

the private purfes of the members of the council of *Hougly*. On the above occafion, the ladies, whofe hufbands belonged to the fraternity, wore the infignia of the order, hanging by a blue or red ribbon over the left fhoulder. They are very fond of fhewing themfelves with this decoration, and the women, whofe hufbands have not been initiated, urge them very much to be fo.

Houghy, which lends its name to Chinfurab, is a Moorifh fort, a fhort half an hour's walk higher up. It is not very defensible, and has little worthy of observation within it, except the house of the fausdar, and the stables for his elephants.

The factory which the Company have at *Patna*, in the province of *Babar*, is eftablifhed for the purchase of saltpetre, and of opium. The chief there, who has the rank of merchant, and has a junior merchant under him, is entitled to affist at the deliberations of the council of *Hougly*, when he happens to be at *Chinsurab*. This office is esteemed the most lucrative, next to that of the director.

The factory at Dacca, was formerly of very little confideration, but for these last three

three years the manufactories have again been profecuted with vigour. The neglect of them is faid, to have been owing to the improper management of a director, who had his own private advantage in view, in fuffering them to be unnoticed by the Company.

Bernagore is a village which belongs to the Company, and, as at Chinfurab, the Dutch flag is hoifted, though they have no other of their fervants refident here, than an under-officer of the fiscal. It lies on the eastern bank of the Ganges, ten or twelve leagues below Chinfurab. The coarfest forts of blue handkerchiefs are made here. The Company have a house, not far from the river, which ferves for the temporary accommodation of fuch of their fervants. as land here, in going up or down the river. Bernagore is famous on account of the great number of ladies of pleasure, who reside there, and who pay a monthly recognition to the fiscal of Chinfurab, for the free exercife of their profession.

The troops which the Company maintain in Bengal amount to no more than LL4 one

## [ 520 ]

one hundred and fifty men, commanded by a captain, two lieutenants, and an enfign \*.

\* In 1776, and 1777, the whole establishment of the Dutch in *Bengel* was reduced to the following: viz. fixty-four perfons in civil, and two in ecclessaftical, employments; fevea furgeons and affiftants, ten belonging to the artillery, fixtynine feamen and marines, and forty-eight foldiers; being in all 200 Europeans. 7.

#### CHAPTER VII.

Manner of Life of the Europeans.—Black Writers. —Banyans —Dom flics.—The Ladies.—Trade of the Company.—Duties paid to the Naboh.—Trade of the French.—Humiliating Conditions imposed upon them at the last Peace.—Strictly insisted upon by the English.—Instance hereof.—Description of CHANDERNAGORE.—House and Gardens of the Governor.—Fastories up the Country.—Danish Settlement at SERAMPORE.— Eastern Nations that refort to BENGAL.—Concluding Reflections on the State of the Country and Inbabitants.

EUROPEANS lead, in *Bengal*, a very eafy life; the men, who are almost all in the fervice of the Company, devote a part of the morning to attending upon their bufines, and those who posses any the least fortune, keep a black writer in daily employment, at their houses, for which he receives twenty or twenty-five rupees per month. These black writers are descendants of Portuguese, who having married native women, their offspring have lost the colour of their fathers, and received that of their mothers; but they retain tain the religion of the former\*. They write a good hand, and copy Dutch very accurately, without understanding a word of it. The Europeans are eased by them, of a great part of the little work they would otherwise have to perform. The Europeans spend the remainder of their time, either in revels, or in fleep, though sometimes the latter can scarcely be procured during the excefsive heats.

Befides these black writers, most Europeans have also one or two banyans, who note down all payments and receipts, and through whose hands all pecuniary matters go, as well in buying as in selling. They serve, in this capacity, without any fixed pay, but they know how much more they may charge upon every rupee, than they have in reality paid, and this is called costumade.

Moorish domestics are kept for the menial fervices of the house, and *peans* to run before the palankeens, and to carry an umbrella, or parasol, over the head of their master, when he goes out.

Every house has likewise a porter, whose fole occupation is to answer the door; and

\* They are what we call Topaffes. T.

one

one or two sets of *berras*, or palankeenbearers, together with a *barrymaid*, or *matarani*, who carries out the dirt; and a great number of flaves, both male and female.

This mode of life naturally occasions an enormous expenditure. The least in rank stand in need of five or fix thousand rupees annually, and even then they must practice Most people spend twice as economy. much, although their income does not amount to more than half of what they difburfe. The dearness of provisions which are brought from Europe, contributes hereto; but perhaps the greatest cause may be traced in the exceffive expence which the ladies incur, in the articles of drefs and appearance. Domeftic peace and tranquillity must be purchased, by a shower of jewels, a wardrobe of the richest clothes, and a kingly parade of plate upon the fideboard; the hufband must give all these, or, according to a vulgar phrase. " the houfe would be too hot to hold him." while the wife never pays the least attention to her domeftic concerns, but fuffers the whole to depend upon her fervants or flaves. The women generally rife between eight

and nine o'clock. The forenoon is fpent in paying paying visits to their friends, or in lolling upon a fofa, with their arms across. Dinner is ready at half past one; they go to fleep till half past four or five; they then dress in form; and the evening and part of the night is spent in company, or at dancing parties, which are frequent, during the colder feason.

Both men and women generally drefs in the Englifh ftyle. The ladies affect, for coolnefs, to wear no covering on their necks, and leave none of the beauties of a wellformed bofom to be gueffed at. They are friendly and affable towards ftrangers, and certainly do not deferve to be called either coy, or cruel. They are fond of parties of pleafure, which are frequently made both upon the delightful banks, and upon the pleafant waves, of the *Ganges*. Yet thefe, and all other amufements, are here peculiarly expensive.

The commerce of the Company in this country was formerly very profitable; but for fome years back, it has greatly declined, which is, undoubtedly, in a great meafure, afcribable to the encreafing influence and power of the Englifh, and their confequent preponderance in affairs of trade; I fay, however, however, in a great measure, because I think I am pretty well informed, that a want of fidelity in the Company's fervants, has not a little contributed to lessen the profits.

The goods which are imported from *Batavia*, and which cannot be brought hither by any other nation than the Dutch, are fpices, and Japan copper, in bars; this last affords the greatest benefit, fince it is an article that cannot here be dispensed with.

The profits, however, upon the fale of these and other goods, do not cover one-half of the expences of the establishment, which amount to full fix tons of gold \*.

The

\* About 54, 500%. sterling. This feems to be taken at random; for the flatement of MossEL, in 1755, makes the charges of the Dutch fettlements in Bengal, amount to f.402, 500, about 36,6001. In 1779, however, they were no more than f.265,517, and the profits upon the merchandize fold were f 385,150, fo that, inftead of lofing, the Company gained f.119,642, or nearly 11,000%. But they both maintained, as we have before feen, a lefs extensive military establishment; and in former times, their direction, in Bengal, must have been flagrantly bad; for we find the following fevere reflections, in a letter written many years before from Batavia, among the papers annexed to the Secret Confiderations on the State of India. by Mossel : " For a feries of years, a fuccession of directors # here, have been guilty of the greatest enormities, and the " fouleft difhonefly; they have looked upon the Company's " effects

The loss of anchors and cables, by the Company's ships, in the Ganges, is calculated

" effects confided to them, as a booty thrown open to their " depredations : they have most shamefully and arbitrarily " falified the invoice-prices; they have violated, in the most " difgraceful manner, all our orders and regulations, with re-" ward to the purchase of goods, without paying the least at-44 tention to their oaths and duty ; we will not add, that the " whole of the Company's profits upon the filver, have been " emberzled, but they have not, for many years, been " forthcoming." If a reform have fince taken place, we need not wonder at the great difference above observed, between the accounts drawn up by Mossal, and those of later years. The profits upon the piecegoods and raw filk fold in Europe. are not inconfiderable; in 1978, were fold the value of  $f_{2,000,000}$  in piecegoods, and the value of  $f_{0,000,000}$  in raw filk, belides two millions pounds weight of faltpetre; and fifteen to twenty per cent is the calculated gain, after deduction of the fhips' charges, upon all three articles. If all other branches were to fail, the opium-trade to Batavia would be alone fufficient to render the commerce of the Dutch in Bengal. a fource of great profit. Mosser calculated the annual gain upon this article at f.800,000; but fince his time, the trade has confiderably flackened, and we may fay, that the advance upon it, amounts now to no more than  $f \cdot \varsigma_1$  or  $f \cdot 600,000$ . About 800 boxes, containing 12516. each, of this drug, go annually from Bengal to Batavia; they ftand the Company, including freight, infurance, and other charges, in about f.792 each; and if fold, as in 1783, for f.1383. 3. 0, the advance to the Company, upon the whole 800 boxes, will be found to be f.472,920, befides the duties at Batavia, upon the exportation to the neighbouring fettlements, which make it amount, as abovetaid.

culated to amount (ito f.30,000 every year \*.

The ship that fails annually from Amsterdam for Bengal, brings iron, cutlery, woollens, and other European goods, which have a tolerable vent. The Company, likewife, gain confiderably upon the filver in bullion, which is imported, and is recoined into rupees.

The money which is required for the purpoles of trade every year here, is effimated at forty or fifty tons of gold +, the largeft part of which is defined for the purchase of return cargoes for Europe, and the remainder for *Batavia*. Those which went to Holland in the year 1768, amounted, per invoices, to f.2,649,510. 17. 0, and confisted in piecegoods, raw filk, and faltpetre for ballast.

Two or more fhips, which go annually to Java, take piecegoods, opium, and faltpetre; of the latter article, the largest part is re-

abovefaid, to between f.5 and f.600,000, or about 50,000. fterling. All the opium is difposed of to the fociety established at *Batavia*, in 1745, for this trade, of which a particular account has been given, page 295 of this volume. T.

\* About 2,725l. sterling. T.

+ Between 350,000l. and 450,000l. fterling. T.

fhipped

fhipped for Holland; and gunpowder is manufactured of the remainder, at *Batavia*.

Befides the yearly pretents, which are given to the Moorifh government, to the amount of about ten thousand gilders, the Company pay certain duties, to the nabob, upon all the goods which are either carried up the river from *Hougly*, or are received there from above. Much misunderstanding arose, in October, 1769, from the non-payment of these dues, which was of great prejudice to the Company, and was only accommodated by the interposition of the English.

The trade of the French here, has, fince the laft war, been greatly on the decline. Their fettlement and fort of *Chandernagore*, were then wholly deftroyed by the Englifh. At the peace which followed, it was conditioned, that the fort fhould not be rebuilt, nor fhould they be allowed to fortify themfelves in any way, nor even to hoift their flag, as the other nations did, at their factories, upon a lofty enfignftaff, but only upon a bamboo-pole. The Englifh are very ftrict on thefe points, and are very careful that the French do not infringe thefe conditions in the leaft. It was not long ago, that they enforced enforced their right in this refpect, without any ceremony.

Mr. CHEVALIER, the French governor, had caused a deep ditch to be dug round Chandernagore, with faliant angles, at intervals, and the earth thrown up inwards, fo that it had the appearance of a rampart, or intrenchment. He alleged, that this work was only intended to keep the place dry. and was undertaken with no other view than to drain the water from the circumjacent country, and convey it into the river. However, when the English council of Calcutta were informed hereof, they looked upon it in a very different light, and they immediately had the work privately furveyed, by one of their engineers, who himfelf related this circumstance to me, and he reported, that it appeared to be made for very different purposes, than those that were pretended. Upon this, they fent word to the French governor, that he must stop the profecution of the work, and deftroy as much of it, as had already been finished; for, if his fole purpose were that of draining off the water, it was unneceffary to dig fo deep; that his ditch was deeper than the low water mark mark of the Ganges; that the faliant angles were needlefs; that the earth ought not to have been thrown up inwards, like an intrenchment; and, finally, that if he did not choofe to do it himfelf, they would be obliged to have the ditch filled up again, by their own workmen. A few days afterwards, they put this threat in execution, and fent the engineer, and eight hundred *fipabis*, or Moorifh foldiers, to *Chandernagore*, who filled up the ditch, and reftored the whole to its former level and defencelefs condition.

However painful this was to the feelings of Mr. CHEVALIER, he was compelled to fubmit to it, being without any means of refifting the will of thefe haughty oppreffors. The French are only allowed a certain fmall number of cannon, for faluting; if they were to contravene this regulation, their fupernumerary artillery would foon be taken away by the Englifh.

Chandernagore is fituated on the western bank of the Ganges, fomething lefs than an hour's walk below Chinfurab, in north latitude 22° 51', and in time 5<sup>h</sup> 44' 37" east of the meridian of Paris, according to the Connoisfance des Temps. It is built, about

about a mile in length, along the Ganges, in a ftraight line, with two parallel, and feveral crofs, ftreets behind it, which have fome good buildings. The ruins of the fort, demolifhed by the Englifh, are at the north end of the place, and fufficiently demonstrate its former ftrength. It could not, however, withstand the heavy fire of the English ships of war, which battered it, and reduced it in a short time to a heap of ruins \*.

The prefent governor has built a handfome house, and laid out an elegant garden, about four miles below *Chandernagore*, where there is a most charming prospect along the *Ganges*.

They have, likewife, feveral factories up the country; at *Coffimbazar*, *Dacca*, *Malda*, *Patna*, and other places; yet their trade is very inconfiderable in comparison with our's, or that of the English. Their some up the river, as far as *Chandernagore*, where there is a sufficient depth of water for them.

The Danish Company have their settlement at Serampore, halfway between Calcutta and Chinfurab, being on the western

\* It is almost needless to add, that both *Chandernagore* and *Chinfurab*, are now in the hands of the English. T.

MM 2

fide

fide of the Ganges. This place is of little confideration. It confifts of a few houfes of Europeans, and a fmall Bengalefe village. The trade of the Danes is more circumfcribed than that of any other nation. They receive only one or two fhips every year from Europe, and they have no country-trade whatever. While I was in Bengal, their director, or governor, left their factory, taking with him, as was faid, three lacks of rupees, or four hundred and fifty thoufand gilders, with which he went to the Englifh, in order to take his paffage to England.

In the last place, several of the eastern nations, Persians, Armenians, and others, resort to *Bengal*, allured by the advantageous trade, which they are enabled to pursue there.

In effect, the land is, in very many refpects, excellently calculated for an extenfive commerce. If we call to mind the circumftances of former times, what treafures have not the goods brought to Europe, produced to the feveral Companies! and what advantages may not ftill be drawn from a country, excelling most others in fertility, and where fo many articles neceffary, and even

even indifpenfable in others, are produced, or received from the neighbouring and otherwife inacceffible regions !

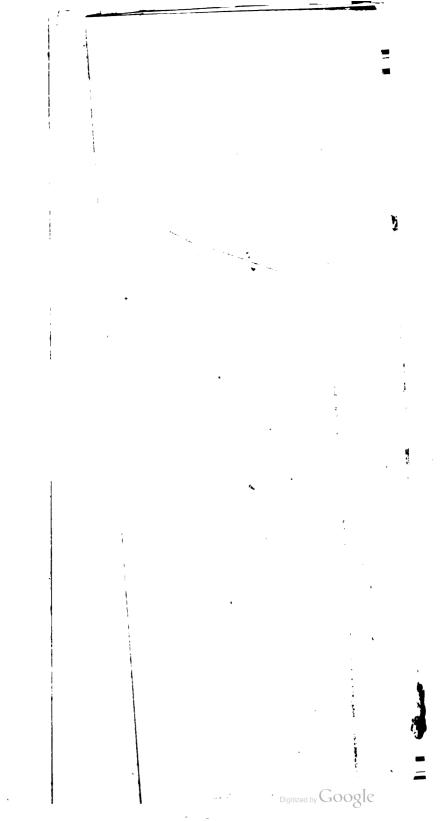

But let us attentively confider all the fons of men, all the nations of the globe, and we thall fpeedily perceive, that nothing is more inimical to the activity of genius, to the exertions of courage, nay even to the prefervation of corporeal health, and the encrease of population, than injustice, injury, and extortion, the infeparable and difastrous confequences of violence and tyranny! What can caft a greater damp upon both induftry and emulation, than the arbitrary measures of a defpotic government ! How much more ingenious, how much more diligent, how much more happy, would this people be, if, instead of being oppressed and kept under, they were encouraged and fupported, and opportunities afforded them of improving themfelves, both in their very excellent manufactures, and in the tillage of their happy foil ! Is it an incitement to them to be active and industrious, that they are forced to labour their whole lives, for an inconfiderable reward; a trifle, that fcarcely fuffices to procure the neceffary food for themfelves and

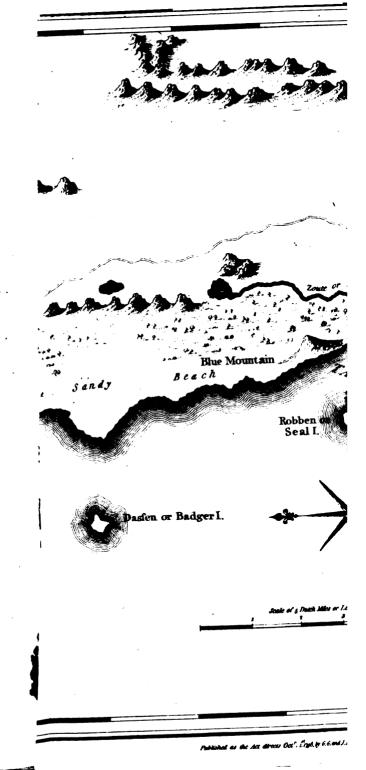

мм 3

and their families? Is it an additional four to industry, that they are treated with contempt and derifion, and that they are exposed to perional abuse and injury?

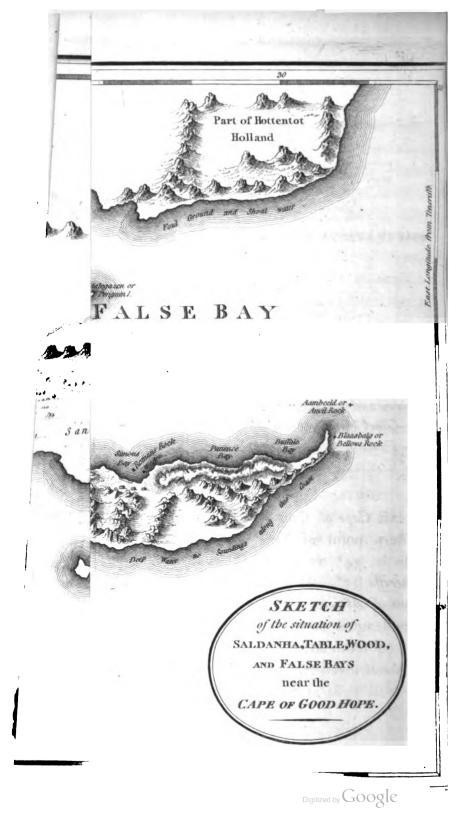

Belides, to what do the advantages in reality amount, which are derived from the labour and fweat of these wretched Indians? They are little better than ideal. The large profits which are received, as it were, with one hand, and paid away with the other, are gradually diminished, and become, from day to day, less perceptible in the coffers of the Companies.

BOOK

#### OBSERVATIONS RESPECTING THE CAPE OF GOOD HOPE.

#### CHAPTER I.

CAPE OF GOOD HOPB.—Sandbill Point.—Table Bay.—ROBBEN Island.—The Table Valley.—Lion's Mountain. — Table-Mountain. — Windberg, or Devil's Mountain.—Weather.—Squalls.—Seafons. —Other Mountains near the Cape.—Soil.—Rivers. —Produstions. — Wheat.— Wines. — Vineyards of CONSTANTIA.—Fruits.

THE Cape of Good Hope is properly the western point of Falfe Bay; its fouth latitude is 34° 25', and longitude east from Teneriffe 35°. It is not the most fouthern point of Africa; for Cape Anguillas, which is fome leagues to the eastward of it, lies in 34° 50' fouth latitude.

About feven leagues to the northward of the weft point of *Falfe* Bay, is the *Leeuwen*-M M 4 *berg*, berg, or Lion's Mountain. From the northern part of it, or what is called the Leeuwestaart, or Lion's-tail, extends a low fandy point, which is called the Duintjes, or Sandbill Point, and which forms the western extremity of Table-Bay. This is a large bay, where ships lie sheltered from all winds, except from N.W. to W.N.W. and when the weather is stormy, from those quarters, a heavy sea rolls in, by which the Company lost seven homeward-bound ships, in the year 1737.

Before the bay, lies a fmall and low ifland, of fomething more than three quarters of a league in circumference, called *Robben*, or *Seal* Ifland. It is a barren and rocky fpot, interfperfed with patches of fandy ground. It ferves as a place of exile, or confinement, for criminals fent hither, either from the Indies, or the Cape. Thefe are obliged to labour, for feveral hours every day, in the fervice of the Company, chiefly in hewing and transporting of lime-ftone, which is afterwards carried by fmall veffels to the Cape, and is used in the construction of houses, and other works; they are allowed the necessfary provisions by the Company.

A serjeant,

A ferjeant, who has the title of post-keeper, with four-and-twenty men, keep guard over these malefactors, who were, in the year 1771, when I lay at anchor there, upwards of seventy in number. No woman is allowed to reside on the island, not even the wife of the post-keeper. The last has his abode on the east side of the island, where there are some houses erected for the prifoners.

Many reefs project out from the island on all fides; and a quarter of a league to the fouthward, there is a large rock, just upon a level with the water, which is called the *Walvifcb*, or *Whale*, and upon which there are breakers upon the least swell of the fea. The road of the island is on the east fide, in nine fathoms water.

Table-Bay is formed by three high mountains, the most western of which is the Lions's Mountain; Table-Mountain is in the middle, and the Windberg, or Devil's Mountain, the easternmost. They lie in a femicircular form, and the valley between them, in which are situated Capetown and castle, is called the Table-valley.

Lion's Mountain has been fo called, becaule, caufe, from a certain point of view, it bears in fhape, a real, or fancied, refemblance to a lion couching. It is therefore diftinguished into what is called the *Lion'sbead*, and the *Lion's-tail*, or *rump*. The *Lion's-head* \* is a bare rock, from the top to the bottom; the tail is likewise rocky, but it is covered with a flight stratum of earth, which produces an inferior kind of grass; and every one is at liberty to let their cattle feed upon it.

The Abbé DE LA CAILLE found that the altitude of the *Lion's-bead*, above the furface of the fea, was 2,151, and that of the *rump*, 2,140 Rhineland feet.

The Company have erected an enfignftaff, upon both these fummits, upon which fignal-flags are hoisted, as soon as any ships are perceived at sea. These fignals are changed every month; advices thereof are sent two years beforehand to Holland, and to the settlements in India, and sealed letters, containing the detail of them, are given to the commanders of vessels, who are to

\* This is likewife called the Sugarloof, by English navigators. T.

touch

to be fure that the place is in the hands of their own countrymen, and, if the fignals agree, that they may proceed with confidence to the anchorage in the bay.

One or two men are conftantly flationed on the Lion's-bead, and as foon as they perceive any fhip at fea, they hoift the flag, and fire one or more times, according to the number of veffels that appear, a small piece of cannon, which has been got up to this place, with great difficulty, and the report of which is the more eafily heard at *Capetown*, from the reverberation, which it makes against the fleep fides of the *Table*-Mountain.

The Table-Mountain is fo called, becaufe, being feen from below, it prefents a flat furface at the top, like a table. It is the largeft, and higheft, of the hills at the Cape. On the north fide, full half of the height is a bare rock, perfectly perpendicular. On the fouth, it is lets fleep, but in the interarediate fpaces, it is equally very precipitous. The perpendicular height of the east fide of the Table, above the furface of the fea, is 3,416; 3,416; on the weft fide 3,470; the length of the Table, 8,638; the diftance of the weftern brow, from the Lion's bead, 9,136; and of the eaftern brow, from the fummit of the Wind, or Devil's, Mountain, 4,436 Rhineland feet, according to measurement of the beforementioned Abbé DE LA CA-ILLE. He likewife found that the mercury, in the barometer, stood  $3^{+50+}$  inches lower on the east fide, and  $3^{+50+}$  inches on the weft fide, than at the furface of the fea.

The Windberg, likewife called the Devil's Mountain,\* is the eaftern boundary of Table-valley; its height is estimated at 3,215 feet. It confists of an entire rock, covered in some few places with a little earth, which nouriss fome some south a little carth, which nouriss fome some south a little carth, which nouriss for some south a little carth, which nouriss for some south a little carth is mountain is thought to be more difficult of ascent than the Table-Mountain.

These three mountains are partly united, about one quarter of the way up, to each other; but are separated by wide chass, at the summits. The *Table*-Mountain appears, by reason of its great height and steepness, to

\* And fometimes Charles's Mountain, by the English. 7.

hang

hang over the town, though it is the farthest distant.

The near neighbourhood of these elevated mountains, and especially of the two last, produces no little inconvenience to the inhabitants of the Cape, in the foutheast. or good, monfoon, by the heavy fqualls. which pour over them. Several hours before they begin to blow, a small cloud appears at the top of the Table, which is followed by others, and affembling together, they gradually cover the whole of the fummit, and descend down its fides, sometimes farther than half way, fo that the mountain appears encircled by an impenetrable mift, while the clouds roll majeftically down the fides of the chafm, between the west fide of the Table Mountain, and the Lion's-bead.

Then follow the most violent gusts of wind, which sometimes last for sour days, and longer. During them, it is even difficult to walk the streets. Large-fized pebbles are taken up by the torrent of air, and carried out into the road, as far as the ships. These can scarcely remain at anchor: it often happens that they part their cables, cables, though they have no fwell of the fea to withstand, but only the violence of the wind.

On coming from fea, when the foutheaft wind blows hard, the greatest danger is run of losing fails, or mass, if one perfists in attempting to reach the road; hence, in such cases, most ships run under Robben Island, and cast anchor there.

Although the feafon when this wind prevails, is called the good monfoon (goede mouffon), it is neverthelefs much better weather, during the months from May to September, which are, on the contrary, called the bad monfoon (kwaade mouffon), on account of the violent northweft winds which then fometimes blow, and make the road of Table-Bay unfafe. For this reafon, the Company's fhips are not allowed to enter it, from the middle of May, to the middle of Auguft, but muft run into Falfe-Bay, where they lie fheltered from all winds.

The other hills, which are in view of the *Cape*, are, in the first place, these of *Hotetentot Holland*, which lie at a great distance to the eastward, and are faid to be full twice as high as the *Table*-Mountain. They are

are a chain of mountains, ftretching to the northward, and ending to the fouth, at the eaft point of *Falfe*-Bay. The others are the *Blauwenberg*, or *Blue* Mountain, the *Koeberg*, or *Cow*-Mountain, and the *Tiger*mountains, which are not far from the *Cape*.

The foil is very good at the foot of the mountains, but in the large vallies, it is barren and fandy, and produces little or nothing. for want of water. Hence most of the farms are laid out upon the fides of the hills, where they are watered by the little rivulets which defcend from the fummits. The foil is much impregnated with faline particles, in the neighbourhood of the Cape, which is very bad for the vines; it was for this reason, when in • the beginning of the prefent century, Governor VAN DER STEL, planted the vineyards of Constantia, whence, as is well known, the most delicious wines are annually brought to Europe, that he had a basket of earth taken up, at the diftance of every hundred roods. for a confiderable tract of country round the Cape, and mixed with water, in order to make experiments of which foil was the least This was found to be at the foot. brackifh. where the famous vineyards of Constantia have have been planted. An old man, whole father had been employed in the establishment of them, related the above to me.

Many rivers, it is faid, are met with up the country, but none of them are navigable; hence all goods are conveyed, from one place to another, by carriages. The largeft river, in the neighbourhood of the *Cape*, is called the *Zoute*, or *Salt* river, on account of its briny tafte. It is fordable every where, even close to its mouth.

Every neceffary of life is produced in abundance, in the country round this colony.

Very excellent wheat is grown in great plenty; fo that, befides the annual exportation to *Batavia*, other nations, the Englifh, and efpecially the French, take large quantities, both of flour and of baked bread, for their Indian posses. The corn is brought to the

\* From 1400 to 1600 tons of wheat ufed yearly to be exported from the *Cape*, for the confumption of *Batavis* and *Ceylen*; belides large quantities of peafe, beans, butter, and wines: and, on the other hand, *Batavia* furnished, by a yearly thip to the *Cape*, a quantity of rice, arrack, fugar, and prepared timber. In the year 1771, the French contracted at the *Cape*, for the ufe of their colonies at *Mauritius* and *Bourbea*, for 400,000 *lbs*. of flour, 400,000 *lbs*. of bifcuit, 500,000 *lbs*. of

the town, from the interior parts of the country; by carts, drawn by oxen, each carrying a load of full one thousand pounds weight, which, when I was last there, was fold for fifteen rixdollars, or thirty-fix gilders \*.

The winepresses yield much wine of various forts, which are all, more or less, agreeable, and in request.

Next to the genuine conftantia, the wines called mufcadel, and *fleen*-wine, are effecmed the beft. There is a fort which in tafte refembles madeira, but which is neither fo ftrong, nor fo racy. The commoneft wines are fold at the *Cape*, for thirty-five, and forty rixdollars the leager; the mufcadel fetches fixty and feventy rixdollars, and the conftantia-wine from fixty to feventy-five rixdollars the awm  $\pm$ .

The last mentioned has its name from the

of falt beef, and 1,200 leagers of wine. Since the Cape fell into the hands of the English, in September, 1795, many cargoes of wheat have been brought thence, to this country. T.

\* See the further corrected statements of Mr. STAVORI-NUS on this head, in the 10th chapter of the second book, of the 3d volume.

+ A leager is nearly four awms, and an awm contains about forty English gallons.

VOL. I.

vineyards

vineyards of *Conftantia*; this delicious wine cannot be produced any where elfe. They lie behind the *Table*-Mountain, towards *Falfe*-Bay, and do not cover much more than forty acres of ground. The wine is preffed from the muscadel-grape, which is let hang till quite ripe, the found grapes are then culled out from the rotten ones, and are alone preffed. The vintage is made in the month of March.

All kinds of fruit are likewife to be met with here, as well fuch as are indigenous of the climate, as fuch as are natives of Europe; currants, however, excepted, of which I faw none. Peaches and apricots are produced in abundance, but they did not feem to me to poffers fo fine a flavour as those of our own growth.

#### CHAPTER II.

The Hottentots.—Their Appearance.—Defcription of Capetown.—The Houfes. — R ver. — Church.— Townhall. — Hofpital.—Its ill Construction.— Bad Treatment of the Sick.—Public Library.— Castle.—Fortifications.—Company's Garden.—Menagery.—Aviary.—Other Gardens belonging to the Company.

THE native inhabitants of the country are the Hottentots; but they are, at prefent, for the most part, removed to a great distance from the *Cape*. They dwell together in villages, called *kraals*, and are under a chief, whom. they elect themselves, and who has the title of captain. The governor of the *Cape* confirms his nomination, and prefents him, as a token of his dignity, with a cane, upon which there is a large brass head, with the usual mark of the Company engraved upon it. They are very proud of this mark of distinction, and so tenacious of it, that they will lose their lives in defence of it.

The Hottentots often hire themfelves, for

N N 2

very

very trifling wages, as herdimen to the farmers, or for other work. The few whom I faw of this nation, were of a moderate stature, not corpulent, but of a coarse make, and a dark brown colour. They have large eyes, a flat nofe, and thick lips. They have thick and black curling hair upon their heads, like the negroes, upon which they fmear all kinds of greafy dirt, and make it one clotted lump of filth. Their teeth are fmall, and as white as fnow. They have no other drefs, than a raw fheepskin, which is thrown over the shoulders; in the warm feafon they wear the woolly fide outwards, and turn it infide when the cold months come on. The parts which most nations agree to conceal, are worn by the men in a cylindrical cafe, which is tied round the waift. The women, who are fomewhat lefs coarfely made, but still extremely unlovely, wear a fmall fquare piece of cloth, for the fame purpofe.

The town of the *Cape* lies at the foot of the *Lion's-tail*, and of *Table*-Mountain. It is oblong in fhape, and it is interfected by feveral ftreets, croffing each other at right angles, though they in fact do not deferve that that name, being all unpaved, and not at all level, the natural unevenness of the ground having been left unaltered. When I was the last time at the *Cape*, however, I was told, that they were going to be duly paved, and levelled. They are very broad, and afford fufficient room for two carts, with fixteen or twenty oxen yoked to them, to give way to each other, with great ease.

As I guefs, there are, at prefent, full five hundred houfes, but they are almost all of but a fingle ftory, and thatched with ftraw, or reed, instead of being tiled, because of the violent and fudden gusts of wind, to which they are continually exposed. They are, for the most part, whitened on the outsides, with lime, which is burnt here from stones fetched from Saldanba-Bay. Within, they have a spacious hall, with roomy apartments on each fide, behind which there is a large chamber, to which they give the name of the gallery.

The little river, which gushes down from the *Table*-Mountain, runs through a large plain, to the fouth of the town, in a canal, lined and faced with brick, which is adorned, on each fide, with fome of the handsomest N N 3 buildings buildings of the country, and a row of shady trees; it is called the Heeren-gragt, or Gentleman's-canal. - actual share

Upon this plain, there are two fountains, which play constantly, though they may be stopped by large brass cocks; the inhabitants, and the ships, are supplied with water from them.

The church stands upon the *Heeren-gragt*, and has four fronts, each embellished with a portico. It is of an octagon form within. The roof is supported by pillars, against which the pews of the governor, and other servants of the Company, are placed, according to their rank. It has a pretty good organ. The little spire which arose from it, was heightened, when I was last at the *Cape*.

The townhall, which makes a tolerably handfome appearance on the outfide, ftands upon a large open place, opposite to the town.

The Company's hospital is fituated obliquely opposite to the church. It is built in the form of a cross, and being inclosed amidst other buildings, it is without a most necessary advantage for fuch an institution, mamely,

Stephender

namely, a free circulation of air. It has befides a very low roof, and is much too fmall for the numerous fick, brought to the Cape by the Company's ships. At its first establifhment, it was only made for the accommodation of five or fix hundred patients: whereas it is now fometimes crouded with more than a thousand. This causes a continued and difagreeable fmell in the building, by which it does not unfrequently happen, that together with the fick which are returned on board of fhips from the hospital, a contagious difeafe is conveyed to the crew, which carries off a great number. The provisions which are given to the patients are very good; but the necessary attendance is wholly wanting, as well as skilful practitioners. If any thing of the Company's affairs ever required a reform, it is the hospital at the Cape, not only with regard to the edifice itfelf, but likewife, and chiefly, with respect to the conduct of it. The wretched failors, do not only run the danger of lofing their lives, or ruining their conftitutions, in this abode of ftench and filth, but their wages are likewife withheld during the time they remain in the hofpital, and

N N 4

and the money goes to the inftitution, becaufe, forfooth, they do no fervice while they are fick, and are neverthelefs provided with victuals and drink \*.

Not far from the church, ftands a building, which is embellifhed with the proud title of *Bibliotheca Publica*. Very few good works are to be met with, among the few books it does contain; being in this refpect perfectly fimilar to that at *Batavia*, which is equally decorated with the fame highfounding title. It is the fexton of the church who is *Bibliothecarius*.

The caftle of the *Cape*, is a regular pentagon; it ftands foutheaft from the town, about 800 feet, and about 330 from the feafhore. On this fide it is covered by a large outwork, and by a ravelin at the gate which leads to the town. The baftions and curtains are built of hard rock-ftone, and are about fourteen or fifteen feet high. Within, it has roomy dwelling-houses for the governor, and other of the Company's fer-

\* In November, 1772, the foundation was laid, by Governor VAN PLETTENBERG, of a new hofpital, on a larger fcale, and in a more convenient fituation, at the eaft end of the town, between *Table*-Mountain and the citadel. T.

vants.

vants. They, however, do not make use of them, but live in the town, the military commander excepted, who is obliged to reside in the fort. A large space is left between the buildings. One particular deserves notice, namely, the dangerous situation of the powdermagazine, which is built against the furnace, or kitchen, of the governor, though it is separated from it by a thick wall of mafonry.

Southeast from the castle, along the beach, a line is drawn, at the end of which there is a small fort, which was not finished, when I was there, and upon which twenty-fix pieces of cannon could be mounted. At the other side of the town, near Sandbill-Point, there is likewise a large battery, to which the name of the water-fort has been given.

All these fortifications ferve for the defence of the road, and to prevent a landing here; but no one, who has any experience in war, would attempt it at this place.

Behind the town, on the acclivity of *Table*-Mountain, is the Company's garden, an oblong-fquare piece of ground, of about fixty acres. Its breadth is fcarcely one-fixth

fixth part of the length. The ground rifes gradually to the end of the garden, though the afcent is fcarcely perceptible in walking.

The foil is clayey and ftony, yet it is continually ameliorated by manure, and frefh and good earth. Lengthwife, the garden has five walks, which lead in ftraight lines upwards. The middle one is the broadeft, and is planted with oak-trees, which, though they are not very large, afford a very agreeable fhade by their thick foliage, uniting overhead. The other walks are equally planted with oak-trees, but they are cut like hedges. These are interfected by eleven cross walks, which are planted with bay \* and myrtle-trees.

By this means, the garden is divided into forty-four fquares, in which many forts of fruit-trees, and all kinds of vegetables, are grown; ferving chiefly to afford refreshments to the crews of the ships, that touch here.

The whole is watered by the little rivulet, which runs down from the *Table*-Mountain. It is conducted, out of the canal mentioned

\* Laurus nobilis.

before,

before, to the garden, and then through numerous little channels to every bed.

At the east fide of the garden, about the middle, there is a handfome fummerhouse, for the recreation of the governor. There is alfo a menagery, which is furrounded by high walls, except on the fide of the garden, where an iron railing admits the view of the animals that are confined in it. These are, harts \*, elks +, zebras ‡, oftriches, cassowaries, and many others. By the fide of the menagery is an aviary, which contains most of the birds, to be met with in the country, which can be kept.

The garden is open, for the recreation of the public, till an hour after funfet, when the gate is closed. It used formerly to be open till late at night, but much abuse being made hereof, it was prohibited.

No one may gather any fruits, or damage any of the productions, upon very heavy penalties. A number of attendants and flaves are continually at hand, to keep watch that no harm be done.

\* Capra dorcas. + Capra oryz. ‡ Equus zebra.

Before,

Before the garden is the gardener's lodge, and next to it a building, in which the Company's flaves are locked up at night.

Befides this the Company, have two other gardens, on the acclivity of the *Devii*'s Mountain, one of which is called *Newland*, and the other *bet Ronde Bofcb*, (the round grove); both of them are adorned with fhady walks, and planted with a great number of fruittrees.

In the first, I faw a standing apricot-tree, which was so large, and had spread its branches so wide, that more than twenty men could be sheltered under them, and it produced very good fruit, at the same time. The governor, and the next in command, live here, from time to time; and very good dwellinghouses have been erected for them. It is a great pity that these pleasant countryfeats, are so subject to the violent attacks of the furious southeast winds which continually sweep down from the mountain.

### CHAPTER III.

Animals.—Horfes —Oxen.—Cows.—Sbeep.—Wild A imals. — Zebras — Offriches. — Sea-cows.— Game.—Fift.—Infetts.

THE horfes which are met with here, are fmaller than in Europe, but they are indefatigable in running. Some of them are eafy faddle-horfes, but many are very reflive and uneafy.

Oxen are made use of, both for the purposes of husbandry, and to draw loaded waggons; from fix to twenty of them, are yoked, two and two, and are commonly under the guidance of a Hottentot, and governed by a long whip.

The cows here do not give fo much milk as in Holland; it is likewife fuppofed to be acrimonious and unwholefome. They are alfo fmaller; and fuch as are, now and then, brought from Europe, are efteemed much more than those bred in the country.

Sheep \* are in great plenty. They are,

\* Ovis laticanda.

in general, larger, and their flefh is full as well-tafted as in Europe. The tail, which confifts of pure fat, weighs five, and fometimes more, pounds. Their fkins are not covered with wool, but with a fort of hair, which is not very fine. Sheep are likewife met with, which are brought from Holland, and propagate equally with the others, but they are not fo abundant.

The wild animals, which are found in the country, and among which the lion, the tiger, the leopard, the buffalo, and the ape, are enumerated, are now far removed from the *Cape*, and are feldom feen near it. The wolf \* only, at times, commits fome nocturnal depredations. Interval

Zebras are fometimes caught alive, brought to the *Cape*, and tamed. I faw one in the Company's menagery. This animal has much analogy, in fhape, with the common afs, but is much larger. It is ftriped with plain brown and white ftripes, of about two inches broad, terminating under the belly, which is whitifh. The head is likewife ftriped, but with narrower lines. Although

\* Hyæna maculata, et canina.

it

it be in a manner tamed, it is always very mischievous, and bites, or kicks, at whatever other animal comes near it.

Offriches are likewife met with here. Intervent Their eggs are bought for two or three flivers apiece; they are very good, fried, or in paftry, and very convenient to take with one, on a journey: one of them contains as much as twenty hen's eggs. The birds which I faw, were about four feet high, with flrong and thick legs, and flumps inflead of wings; they carry their head and long neck upright. The male is much handfomer than the female; the latter is covered with an ugly kind of light brown hair, and thin feathers; but the feathers of the male are black, and much handfomer, and more gloffy.

Sea-cows \* are fometimes met with in the rivers; but I faw none. I eat, however, of the flefh of one, which the governor affured me, had weighed more than two thousand pounds. The meat, and especially the fat, is very tasteful, and does not at all disagree with the stomach, however heartily one eats

\* Sea-cow is the denomination given by the colonists at the Cape, to the Hippopotamus, or river-horfe. T.

of it : if not told beforehand, it might be taken for beef.

There is no want of game here; *fleen*boks \*, hares +, fnipes ‡, and others, are in great plenty; the firstmentioned, are very fine eating, and are esteemed the best game.

The fea yields an incredible quantity of fifh, for the confumption of the *Cape*. The Hottentot-fifh, which is like a fea-bream, is daily brought to market, in great plenty. The *Rooman*-fifh, which is not unlike the former, only fomething bigger, is one of the most delicious that is caught; it is covered with light red fcales. Soles and rays are alfo abundant,

When we were failing from *Rebben*-Ifland to the road of the *Cape*, we met a very large fifh, floating upon its back, with its belly blown up, fo that it appeared five feet above the water. It paffed us within a fhip's length, and appeared to be twenty feet in length. The opportunity would not allow of our holfting out a boat, or I fhould certainly have endeavoured to have made myfelf mafter of it.

- \* .Capra grimmia. + Lepas capenfis, et communis.
- Scolopax capenfis.

Many

Many infects peculiar to warm countries, are found here. In particular, the inhabitants are much tormented by flies, of which there are incredible quantities. In the *Rietvallei* (valley of reeds), about three Dutch miles from the *Cape*, I faw locufts of all colours, full four inches in length, and one in thicknefs.

There are likewife fcorpions, fpiders, and centipedes. Of the last, there are fome that are four inches in length; but it is very feldom, that any one is heard to have been stung by them.

#### CHAPTER IV.

First Settlement of the Colony.—Extension of it by French Refugees.—Colonists in the Country.—Inbabitants of the Town.—Women.—Men.—Dress.— Character.—Their Trade.—Lodging of Strangers.— Cheapness of Provisions.—Distempers.—The Smallpox—Degrees of Heat.—Barometer.—Tides.— Coins.—Government.—The Governor.—Council of Polity. — Council of Justice. — Punishments.— Drosts.—Clergymen.—Troops and Militia.

ALTHOUGH the Portuguese, the Dutch, and other nations, navigating to India, frequently touched at this fouthern extremity of Africa, to refresh themselves in *Table*-Bay, as a tolerably fase harbour; yet none of them endeavoured to secure a durable establishment here, till the year 1652. About that time, the directors of our East-India Company, though fit, upon the instigation of one VAN RIEBEEK, surgeon of one of their ships, to establish a permanent settlement, for a place of refreshment for their vessels, at the *Cape of Good Hope*. For that purpose they sent VAN RIEBEEK, with four ships, . 1aden

laden with the neceffary materials, implements, and provisions, to found a colony at this promontory. At first, he only built a fort of wood and earth, to which he gave the name of *Keer de Kou* (a defence against cold), adding a few other buildings wanted for his people, and to hold the goods.

This colony has, in fact, extremely well anfwered the intent with which it was fettled, and has encreafed fo much fince that time, that it may now be efteemed one of the most indispensable possessions of the Company.

A number of refugees from France, who were obliged to leave that country, in 1685, on account of their religion, did not a little contribute to the extension of the fettlement. Although they met with an afylum in our republic, they did not, all of them, find fufficient means of fupport; many, therefore, emigrated again to this country, in order to exert their industry, in the cultivation of those fertile tracts, which lay here untilled, and fcarcely noticed. To facilitate this to them, the Company directed, that the implements of hufbandry, cattle, and other neceffaries, should be delivered to them, 002 upon

upon condition that their value fhould be repaid, at the end of four years. Two-thirds of the farmers that live in the country, bear names which prove their French origin. Among others, there are a great many of the names of VILLIERS and RETIF.

The fruitfulness of the women in this healthy climate, where few, have lefs than fix, and many, more than ten or twelve children, has occasioned, and still occasions, the continual extension of the colony inland; fo that, as I have been informed by people well worthy of credit, there are farmers who live at the distance of two hundred Dutch miles from the town, and fland in need of a month's time, to travel, with their teams of oxen, to the Cape. There are many of them who have never been at the fettlement, and never go out of the diffrict in which they dwell, contenting themfelves with what the country affords, and living a patriarchal life, free from care, disquiet, and disease.

The inhabitants of the town, both men and women, look fresh and healthy. They are well-proportioned; and among the ladies, there are many who truly deferve the name of beauties.

In

poogle

In general, they are likewife more witty and lively than the men; free in their manners, and very fond of pleafure, which is, in fact, the bufinefs of their lives. They are much attached to ftrangers, efpecially to the Englifh, who care not for their money, and fpend it freely upon the ladies, and in procuring them every kind of diversion. I did not perceive that they made much of the generality of our feamen; yet it does not unfrequently happen, that thefe pick up wives here, and bring them to Europe.

They all lead a very eafy life. The men, who are freemen of the town, are feldom feen abroad: they are generally at home, in an undrefs, and fpend their time in fmoking tobacco, and in loitering up and down the house.

After dinner, they take a nap, according to the Indian fashion, and in the evening they play a game at cards. They are not addicted to reading, and are, consequently, very ignorant, and even know little of what is doing in other parts of the globe, except from what they may hear by the strangers who visit them from time to time. I met with several, who were not to be perfuaded, 003 that that a better country, or a more pleafant place, than this, their native home, was any where to be found.

In drefs, both men and women follow the Dutch mode; the appearance of the latter, however, is more modifh than might be expected at fo fmall a place.

The character of the inhabitants in general, especially of the farmers, is open and friendly. They are extremely hospitable, and share whatever they posses with the strangers who may visit them. In the town, however, much envy and jealous prevails among the inhabitants; they grudge each other the least good fortune, and their companies, become in consequence, on the long run, very disagreeable to strangers; for they cannot avoid shewing their ill will for their neighbours, by remarks and farcas not always unaccompanied by flander and calumny.

Most families at the *Cape* are maintained by the trade, which they carry on with the feafaring people who touch there, or by keeping lodging-houses for the spiral officers. These generally pay one rixdollar per day, per head.

These means would not, however, afford a sufficient

a fufficient livelihood, were not the neceffaries of life proportionably cheap. A good fat fheep feldom cofts more than feven skillings \*; when I was there, beef fold for four or five doits (eighths of a fliver) per pound; a mud + of wheat amounted to about four gilders; the common wines were fold, from two to three and a half flivers per bottle. Beer is not much drank here, though there is a brewery near the town, where pretty good malt-liquor is made.

On the other hand, all articles for drefs must be imported from Europe, or from the Indies, and this renders the *Cape* in this refpect a dear place. European broad cloth generally affords a handsome profit, as an article of trade.

The chief diforders incident to the country, are fuch as arife from colds, occafioned by the variability of the weather, and the great changes in it, which are fometimes felt on the fame day. Fluxes, putrid fevers, and all difeafes proceeding from exceffive heat and noxious exhalations, are feldom heard of, except in the hofpital.

† A mud is equal to about three bufhels. T.

004

This

<sup>\*</sup> About 31. 9d. fterling. 7.

This fettlement has, however, not long ago, fuffered amazingly, for the third time, by the ravages of the imall-pox. Many of the inhabitants, who had never had this diforder, fled to the country, where it had not fpread, and the town became, on a fudden, an abandoned and folitary place.

In the beginning of this century, this deftructive fcourge was unknown in this country. It was in the year 1713, as I was told by fome old people who were then alive, that it was difcovered for the first time, and deftroyed a great number of the inhabitants.

The *Cape* remained free from its ravages, afterwards, till the year 1755, when it again burft out with great fury, and carried off upwards of two-and-twenty hundred of the inhabitants of the town, in a very flort time.

It appeared for a third time, in the years 1765 and 1766. The infection was then faid to have been brought by an Indian flave with one of the homeward fhips. It did not rage with fo much violence, as the two former times; but it was not till the year 1769 that it entirely difappeared.

During this latter prevalence of the contagion, one gentleman inoculated two of his children,

children, with this fingular confequence, that the eruption did not take place, till the fortyfourth day after inoculation; they both did very well, and were alive when I left the *Cape*. This man was the only one, who was rational enough, to put this falutary invention in practice.

The greatest degree of heat, that I obferved here, was 87°, and the lowest 68°, in the afternoon, by a Fahrenheit's thermometer. The barometer rifes and falls very suddenly; it generally ascends when the wind is at s.E. and descends when at N.W.

The tides do not rife high; the difference between high and low water being no more than three or four feet.

The filver ducatoon, which goes in India for eighty flivers, is only current here for feventy-two, whether milled or not. Rupees, whether of *Batavia*, *Surat*, or *Bengal*, indifcriminately, go for twenty-four flivers. The coins which are current in Holland, are equally fo here, except the Zealand rixdollars, for which no more than fifty flivers can be obtained. Sefthalfs (pieces of 5<sup>‡</sup> flivers) go for fkillings (pieces of fix flivers). Accounts are kept here, just as at *Batavia*, in rixdollars rixdollars of forty-eight flivers. At public fales, and likewife in retail, the prices are taken at Cape gilders of fixteen flivers each. The Company's books are kept here, as well as through all India, in Holland's currency.

The chief authority is vefted in a governor, who is, at the fame time, counfellor of India. During my abode here, this office was filled by Mr. TULBAGH, who had refided at the *Cape*, in a variety of ftations, ever fince the year 4716, and was univerfally beloved by the colonifts, on account of his excellent qualities.

A certain number of the chief fervants of the Company, are given to him as counfellors, and who form the council of polity. The fecond in rank next to the governor, and the fifcal, who is independent of him, have the rank of fenior merchants; and thefe, together with the chief of the military, who has the title of lieutenant-colonel, or major, are the principal perfons of the eftablifhment.

The management of whatever regards navigation, is vefted in a comptroller of equipment, who is equally a member of the council of polity.

The administration of justice is confided to a separate

a feparate council, of which, the fecond in command of the colony is prefident. In civil matters, an appeal lies from their fentence to the council of justice at *Batavia*. In criminal affairs, they are empowered both to pass fentence of death, and to put it into immediate execution.

Punishments are very fevere here, especially with regard to oriental flaves. In the year 1768, I faw one, who had fet an house on fire, broken alive upon the wheel, after the flesh had been torn from his body, in eight different places, with red-hot pincers, without his giving any fign of pain, during the execution of this barbarous sentence, which lasted full a quarter of an hour. Impalement is in use here, as well as at *Batavia*.

Officers are appointed in the interior parts of the colony, called *drofts*, or fheriffs, who arreft criminals, but have no power of trying or judging them; they must be fent up to the council of justice, to be examined and punished,

Befides the above, there are feveral other civil courts, or boards.

There are three clergymen of the reformed religion, who preach twice every Sunday. The The Company's troops amount to about four hundred men. The inhabitants of the town, and the country-people, are all likewife enrolled, and divided into companies.

BND OF VOLUME THE FIRST.
